Very few of our people here in the South appreciate the real value of a late summer- or early fall-planted vegetable garden for late fall and early winter use. Properly planted and cultivated, the fall garden anywhere in the Cotton Belt and the Gulf Coast sections will furnish an amazing amount of vegetable food and will prove second only in value to the spring plantings.

The selection of the varieties made for this collection is the result of many years' experience. With the exception of the beans, every variety will stand heavy frosts and freezes without serious injury. You will make no mistake in planting this collection anywhere in the South during August and September, and in southern Florida all the varieties can be planted all through fall and winter.

Every variety is well adapted to the South. The seeds themselves are fresh and vital. In price (75 cents, postpaid) this collection is a splendid seed bargain, and if each of the thirteen items were purchased separately, the cost would be $1.10.

If you have planted a fall garden before, you know its value. If you have not planted a fall garden before, try it out with this collection this fall. You will be both surprised and pleased with the splendid results.

1) 1 pkt. Surehead Cabbage ............ $0.10 6) 1/2 lb. Stringless Green-Pod Beans $0.20
2) 1 pkt. Big Boston Lettuce .......... 05 7) 1 oz. Purple-Top Globe Turnip ... 10
3) 1 pkt. Georgia Collards .......... 05 8) 1 oz. Early White Flat Dutch Turnip 10
4) 1 oz. Aragon Spinach .......... 10 9) 1 oz. Seven-Top (Salad) Turnip 10
5) 1 pkt. Early Green Curled Kale .... 05 10) 1 pkt. Rosy Gem Radish .......... 05

11) 1 pkt. Bermuda White Onion ....... $0.10 12) 1 pkt. Eclipse Blood Beet ........ 05
13) 1 pkt. Chantenay Carrot .......... 05

$1.10

If you want The Ruralist, enclose 40 cents with your seed order

Remember—No order too large or too small to send to HASTINGS'
Seed Premiums  Please read carefully so that you understand this offer fully. When you order seeds in packets and ounces to the amount of one dollar or over you can select other seeds in packets only to the amount of 25 cents on each dollar's worth of packets and ounces ordered. This does not apply to the larger sized packages, such as quarter-pounds, pounds, pints, quarts, etc., nor does it apply on special collections of seeds, onion sets, plants or bulbs. You can not order a dollar's worth of seeds in packets and ounces and then select a quarter-pound of something priced at 25 cents, or a pint of peas or beans as a premium; neither can you order a dollar's worth of seeds in quarter-pounds, pounds, pints, or quarts, and then select 25 cents' worth of seeds in packets. To be entitled to these premium seeds you must order seeds in packets and ounces to the amount of a dollar or more, and then select the premium seeds in packets only.  We shall be glad to have you select the premium seeds that your order may entitle you to under this offer.
PEACE—SEED PRICES

Two years ago, on this page of our Fall 1917 Catalogue, appeared a statement headed "War and Seed Prices" explaining the necessity of increased prices of seeds due to increased cost of production.

This page has to go to the printer in June. We cannot foresee just how the peace Conference in Paris is going to come out with the Germans, Austrians, etc. There may be a "flare-up," but for all practical purposes we have and have had peace for some time.

Peace like war has an effect on seed production and cost and in this catalogue you will begin to find a lowering of prices on many kinds of seed which you will find agreeable. With the exception of a comparatively few items of vegetable seed we need no longer caution you to buy and plant sparingly for fear there would be a seed famine. Further, prices on many items have been reduced so that the cost need not lead to curtailed plantings.

Seed production so far as quantity is concerned is getting back to nearer a normal condition. You cannot, however, expect prices to get back to the before-the-war-level for a long time to come, if ever.

The same general conditions of increased labor, fertilizer, etc., expense that makes it cost you more to produce your cotton, corn, or other crop, acts exactly the same way as to the production of the various seed crops.

In our opinion the world will have to pay a permanently higher price level. This will have a bearing on the price of everything you sell as well as everything you buy. There will be ups and downs of prices just as there always have been but the general level or average will be higher than before the war.

In all the price uncertainties of 1914 to the present time we have played absolutely fair with you. We never raised a price until it was absolutely necessary to meet increased costs. We never did go to the extreme of high prices that many seed houses did. One of the representatives of the United States Department of Agriculture said to our Mr. H. G. Hastings in Washington about a year ago, "They certainly cannot rightfully accuse you of profiteering."

With peace, the price tendency has started downward and in this catalogue, the first issued since affairs settled down somewhat, we are giving you all the benefit we can of lower prices. In some instances the drop in price is very marked, in others there is little or no change. Field and grass seed show less tendency to drop than most vegetable seeds. It will probably be several years before the readjustment will be complete.

Our firm was one of the last seed firms to advance prices; it is one of, if not the very first to start them down. All through the war period we positively and absolutely refused to speculate in seeds or "profiteering." We felt then and feel now that we had no right to take advantage of you and the hundreds of thousands of planters who depend on us for their seed supply.

It has always been and always will be the Hastings' business policy to treat every seed buyer just as fairly and squarely as we know how both in quality of seeds and prices. We did it all through the war period, we are doing it this summer and fall. We are doing it, first, because we think it the right way; second, because we believe that you will stand by us and treat us just as fairly and squarely as we have tried to treat you.

Enough however of prices and business policy. Let's talk about something else. Our boys are either home or else will be shortly. Our nation is rapidly turning from war to peace activities. Labor conditions are easing up and the world-wide demand for American food and products continues unabated.

It's fine to think about and talk about the world market for cotton, wheat, meat, manufactured goods, etc., but don't forget the money-saving crops that go into the home, the two or three times a day continuous demand from the mouths of the family around your table, the steady demand for grain, forage and pasturage from the mules, horses, cattle, hogs and chickens.

You cannot afford to buy food and grain at present or anywhere near present prices, pay for it out of 30-cent cotton and have much money left. Fall is a splendid time to plant the money-saving crops like the Fall vegetables, wheat, oats and rye. They all have a money-saving place in the home and on the farm.

PRICE NOTICE ON FIELD AND GRASS SEEDS

At the time this catalogue goes to press we cannot offer field and grass seeds at definite prices. The market varies almost daily, so when you are ready to buy oats, wheat, rye, barley, grasses, clovers, alfalfa, etc., write us for prices on the quantity you need. We will give you right prices, send samples if requested, and freight or express rates to your station.

Alphabetical Index for Catalogue Reference

Flower Seeds are listed on pages 51-53.
Flowering Bulbs are listed on pages 54-55.
Kosets (plants) are listed on page 56 and inside of back cover.
So far as possible, in making up this catalogue, we have arranged the vegetables in alphabetical order.

This complete catalog—all reading matter and illustrations—Copyrighted, 1919, by H. G. Hastings Co., Atlanta, Ga.
For those who only order seeds for garden use in packets, ounces, quarter pounds, pounds, and pounds, beans, corn, etc., in one or two lots, no attention need be paid to this page for calculation of postage.

On all seeds listed in this catalogue in packets, ounces, quarter pounds, pounds, and in the case of peas, beans, and corn, in one and two pounds lots the price given on the includes postage prepaid by us to any postoffice regardless of the zone the purchaser may live in.

Prices on small lots of seeds are those paid largely for the reason that it would be almost impossible to calculate correctly the weight of a general order for seeds containing numerous items and varying quantities of each, so we have thought best to include a reasonable average cost of postage in the quoted prices of these small quantities, thus relieving the buyer of the trouble of figuring on the matter of correct postage for his particular order.

When one goes into the purchase of larger quantities when the actual weight can be easily and correctly figured and on which the parcel post rates are proportionally lower than on the smaller shipments it becomes a matter of competition of express and freight and in the case that the purchaser lives some distance from town on an R. F. D. route, the parcel post shipment will be brought to his door instead of having to go to town and get it from the express or freight office. Further, in many instances the parcel post rates are lower than on comparatively small shipments than express or freight and the service more prompt.

**WHEN YOU ORDER**

When you order seeds in quantity at prices listed by express or otherwise, not prepaid, and you want same to come by Parcel Post, you must remit an extra amount to cover cost of postage in addition to the cost of the seed. These shipments by Parcel post must have the postage prepaid. As all seeds in this catalogue that are used in quantity are quoted by the pound the weight is easily and correctly determined.

If you wish to order 14 pounds (a peck) of corn, or 15 pounds (a peck) of beans or any thing like that in addition to a general order of seeds in packets, etc., you should only calculate postage according to the list on this page on the corn, or beans or whatever else you may be ordering in quantity.

You must figure the amount to be sent for postage on the quantity of seed that is to be shipped on an R. F. D. route according to the weight of the shipment and the Postal Zone you live in according to its distance from Atlanta, Georgia. You must send the correct postage, and usually the R. F. D. Carrier can give you the proper zone information.

**HOW TO FIGURE POSTAGE**

Two things are necessary. First figure up the weight of the seed according to what you are ordering. Then, assuming that you know the particular zone you live in from Atlanta, take the amount shown in the column for that zone opposite the number of pounds you are ordering. Whatever that amount is must be added to the cost of the seed so that we can prepay the postage.

As an example we will suppose that you want to order 14 pounds of corn. If you live in either the 1st or 2nd postal zones from Atlanta the amount, to be sent us in addition to the price of the corn would be 18 cents; for the 3rd postal zone the amount would be 24 cents on the 4th and 5th postal zones the amount shown on the table it's very easy to figure it exactly once you know what your zone number is.

By parcel post seeds can be sent to any post office and if you live on an R. F. D. route and send the right amount the amount in cents is the weight limit. If larger quantities are wanted it would have to be split into two or more shipments. 30 pounds is the weight limit for the 4th, 5th, 6th, 7th and 8th zones.

**APPROMATE LOCATION OF ZONES**

For those who cannot easily get information as to their zone we give the following approximate location of the zones. If at all in doubt as to your zone be sure and send enough to cover necessary postage on the second envelope which will be returned to you. The rates in the 1st and 2nd zones are the same.

**GEORGIA**—Largely in the 1st and 2nd zones. Extreme southern part is in 3rd zone.

**ALABAMA**—Divided between three zones; eastern half in 2nd zone, western half in 3rd zone except extreme southwestern portion which is in 4th zone.

**FLORIDA**—Three zones. The northern part is in 3rd zone, the middle and most of South Florida in the 4th, and extreme southern portion in 5th zone.

**MISSISSIPPI**—About evenly divided, the eastern half being in the 3rd and the western half in the 5th zone.

**LOUISIANA AND ARKANSAS**—Both of these states are entirely in the 4th zone.

**TEXAS**—Mostly in the 5th zone, a small part including the most eastern counties being in the 4th and extreme western portion in 6th.
Seeds for Summer--Fall Planting

Seeds Postpaid by Mail Remember that the prices given in this list include delivery of all seeds by packet, ounce, quarter-pound, pound, pint or quart, except where noted. Send us the amount named in this catalogue, and we guarantee safe delivery by mail in these quantities.

Liberal Premiums Please bear in mind that on seeds in packets and ounces only (no quarter-pounds, pounds, plints or quarts), the purchaser may select 25 cents worth extra on each dollar sent. This does not apply to orders for collections, prices of which are net.

Cost of Sending Money In all cases where the order for seed amounts to one dollar or more, the cost of postage or express money order, or cost of registering the letters from places that are not money order offices, may be deducted from the amount of the order.

Stamps U. S. Postage stamps in good condition (one-cent and two-cent stamps preferred) the same as cash, but we would ask those remitting stamps to wrap them in oiled paper, if possible, to prevent their sticking together or to the order.

About Warranty H. G. HASTINGS CO. give no warranty, either express or implied, as to description, quality, productiveness or any other matter, of seeds, bulbs or plants they send out, and will not be in any way responsible for the crop. If purchaser does not accept the result of the seeds, they are accepted for return, and any money that may have been paid for them will be refunded. Crops are dependent on success or failure on so many things besides seed that it is impossible for us to give any warranty or guarantee. This is a responsibility we cannot and will not accept. No responsible seedsmen gives any warranty.

HASTINGS' RIGHT VARIETIES OF RIGHT QUALITY AT RIGHT PRICES

Palmetto Asparagus Seed (No. 1) The Palmetto, while an old variety, is beyond question the best variety for the South. Seed can be sown either in fall or spring, thinly in drills one foot apart. When well up cultivate frequently and continue until the roots have grown for one year. In transplanting, put the roots 18 inches apart each way and 4 inches below the surface. Use your richest piece of ground and remember that you cannot use too much manure on asparagus. The Palmetto is earlier, more yielding and more resistant to disease and stronger in growth than later introductions.

Packet, 5 cents; ounce, 10 cents; ½ pound, 25 cents; pound, 75 cents.

Palmetto Asparagus Roots (No. 2) If you save from 1½ to 2 years' time in getting your Asparagus bed in condition to cut by the use of our splendid 2 year old Palmetto Asparagus Roots. Plant them this fall in the Lower South and save six months' time. While this is a little more expensive than planting the seed, yet the time saved and the generally more satisfactory growth makes it well worth while to use the roots. 50 roots, 85 cents; $1.50 per 100; postpaid. By express or freight, not prepaid, per 100, $1.00; per 1000, $7.00. Orders booked now. Roots ready for shipment about November 1st.

BEANS for Late Summer and Fall Planting

Culture If you don't plant beans in late summer and fall you lose a good part of the "bean season." Beans can be planted all through the summer in the Central South up to September with safety. In Florida and the Gulf Coast sections they can be planted still later. Late summer and fall planting often yield heaviest crops. Sow in drills 18 inches to 2 feet apart; drop a bean every 3 or 4 inches, covering about 2 inches. Keep soil stirred frequently and when plants are about to bloom, draw the earth up close around them.

Hastings' Excelsior Refugee Beans For late summer or early fall planting use this new (No. 14) better bean than Excelsior Extra Early Refugee, where earliness of maturity, heavy bearing and resistance to hot summer sun is wanted. For the home garden it is all right; for the market gardener, for local market or Palmetto to Northern cities, it is a money-maker. It is a vigorous grower and heavy bearer of medium sized, round, very finely flavored green pods. No other variety equals it in ability to withstand either extreme wet or dry weather without serious injury; holds pods well up off the ground. Packet, 10 cents; ½ pound, 20 cents; pound, 35 cents; 2 pounds, 65 cents; postpaid. Not prepaid, 15 pounds (peck), $2.75; 60 pounds (bushel), $10.25; 100 pounds, $17.00.

Improved Round Pod Refugee (1000 to 1) (No. 13) Identical with Excelsior Refugee except that it is 10 to 11 days later in maturity and a much heavier bearer. Used almost exclusively in some parts of Florida for planting in fall and early winter for Northern shipment. Plants literally full of medium sized round fleshy pods. Of good flavor and hold up well in shipping. Also fine for canning. Resistant to drought and cold. Packet, 10 cents; ½ pound, 20 cents; pound, 35 cents; 2 pounds, 65 cents; postpaid. Not prepaid, 15 pounds (peck), $2.75; 60 pounds (bushel), $12.00; 100 pounds, $20.00.
Hastings' Stringless Green Pod Bush Beans (No. 6)

To our mind the highest quality bush bean of all. For our personal garden use it is the only green podded bush variety that gets a place in our home garden. Not advised for shipping because pods are too large, but for home use and nearby markets it has no equal. Pods absolutely stringless from the time they start to corn until they begin to dry. Very prolific, a strong, vigorous grower, coming in about the same time as our Red Valentine. Pods retain their fine flavor and quality to the last. If you want bean quality combined with heavy bearing, plant our Stringless Green Pod. (This is entirely different from the "Stringless" variety which is governed by a different quality that we have never catalogued it.) Packet, 10 cents; 1/2 lb., 20 cents; pound, 40 cents; 2 lbs., 65 cents; 100 lbs., $2.00.

Hastings' Extra Early Red Valentine (No. 25) The standard bush bean of almost all parts of the South, either for home use, nearby market or for shipping. It's a good bean for all purposes and its popularity is well deserved. Pods, 5 to 6 inches long, well rounded, meaty and of good flavor. Plants of crusted pods, holding pods well up off the ground. Uniform in size and shape of pods. Packet, 10 cents; 1/2 lb., 20 cents; pound, 40 cents; 2 lbs., 65 cents; 100 lbs., $2.00.

White Mexican or Prolific Tree Bean (No. 28) loads of white or navy beans should come South every year from New York and Michigan to be sold largely to our farmers. The White Mexican is an adapted type of the white bean fully adapted to all parts of the South. Planted in August in this section and in early September along the Gulf Coast, White Mexican will give an abundance of white shell beans for winter use. It's a real bush or half-runner type of bean requiring no brushing or wires and plant in good soil are literally covered with pods. Plant in rows about 2 feet apart, leaving single plants 6 inches apart in the rows. Packet, 10 cents; 1/2 lb., 20 cents; pound, 40 cents; 2 lbs., 65 cents; 100 lbs., $2.00.

Early Black Valentine (No. 23) A black seeded type that is a great favorite in some of the coast sections. A good bean, hardy and resistant to both heat and cold. Packet, 10 cents; 1/2 lb., 20 cents; pound, 40 cents; 2 lbs., 65 cents; postpaid.

Wardwell's Kidney Wax (No. 16) A choice market or home use. Extra early, maturing in 5 to 6 weeks with favorable weather. Vigorous grower, producing heavy crops of long, showy white wax pods. Tender, flavorful beans and almost stringless. Packet, 10 cents; 1/2 lb., 20 cents; pound, 40 cents; 2 lbs., 65 cents; postpaid.

Sure Crop Stringless Wax (No. 20) Extra large yellow pods are 6 to 7 inches long, almost straight and full, very meaty and sweet; stringless after 8 weeks growth. Plants very upright in growth, healthy and vigorous. Packet, 15 cents; 1/2 lb., 30 cents; pound, 50 cents; 2 lbs., 85 cents; postpaid.

Davis White Wax (No. 29) Immensely productive bearing large almost straight white waxed colored pods, 5 to 6 inches long. Holds up wonderfully and sells at top prices on appearance. Good for home garden use as white shell beans for wiring or pickled in quality for snap beans as others. Packet, 10 cents; 1/2 lb., 25 cents; pound, 45 cents; 2 lbs., 80 cents; postpaid.

Hodson Wax (No. 22) Strong, vigorous, healthy grower with clean wax pods about 5 inches long, nearly straight, very thick, flat and meaty. Medium maturing, flesh tender and of excellent eating quality. Very popular with Florida shippers. Packet, 10 cents; 1/2 lb., 20 cents; pound, 40 cents; 2 lbs., 65 cents; postpaid.

Hastings' Early Valentine Wax (No. 24) Really a wax podded Valentine bean; round and fleshy; grows 15 inches high with medium sized, vigorous stalks, and good foliage. A first class wax bean for home use and nearby markets. Packet, 10 cents; 1/2 lb., 25 cents; pound, 45 cents; 2 lbs., 80 cents; postpaid.

Rust-Proof Golden Wax (No. 30) Our improved strain of Golden Wax; rust proof to a remarkable degree; well suited to all parts of the South. Packet, 10 cents; 1/2 lb., 25 cents; pound, 45 cents; 2 lbs., 80 cents; postpaid.

FROST PROOF CABBAGE PLANTS—Varieties: Early Jersey and Large Charleston Wakefield and Early Flat Dutch. By Parcel Post, prepaid to your postoffice.

Frost proof cabbage plants for late November and December planting do wonderfully well in all the lower South and we can supply plants in any quantity after November 20th. Send in your order any time and we will ship to you after November 20th, postpaid to all parts of South only. No orders from Florida will be accepted because of restrictions of the Plant Quarantine law causing delays in plants reaching destination.

Single Hundred—On small shipments we will furnish 100 plants of any one variety for 45 cents, postpaid. No order for less than 100 plants of any one variety will be filled. Orders are filled by the hundred—not by 250 or 350—but 200, 300, or 400. Write for special prices on 500 or over of the same variety.

Hastings' Wax Beans
**“SNAP BEANS” UNTIL FROST—DRY SHELL BEANS FOR WINTER**

Most gardeners in the South neglect a splendid opportunity in late summer and early fall. These pole varieties all reach maturity in about 50 days planted during July, August and early September, bearing heavily, furnishing a supply of "snap" beans until frost and, if a part of the pods are left to fully mature, there is always an abundance of dry shelled beans for winter use. The same is true of the Lima varieties, both pole and bush. Be sure and plant pole beans in August and September. It will pay you well. Fall gardeners are economic necessities to every family and some varieties of beans are essential to every garden.

**Texas Prolific, Old Homestead, Kentucky Wonder (No. 15)** Known under all three names and liked everywhere pole beans are grown. Plant in late summer or early fall. It begins to bear in about 50 days and all through fall until frost if planted on heavier crops of its extra large, delectably flavored pods than from early spring plantings. You can absolutely depend on it doing its full duty right up to the time of killing frost. Pods 6 to 12 inches long, well rounded out, meaty, tender and practically stringless. Immensely prolific, a peck of green pods having been picked from a single vigorous vine. If you have planted it before, you know what we say is true. Don't forget to plant some this summer or fall. Pole bean planting in August or early September is worthwhile. Packet, 10 cents; ½ lb., 20 cents; pound, 35 cents; 2 lbs., 65 cents; postpaid. Not prepaid, 15 lbs. (peck), $3.25; 60 lbs. (bushel), $12.25; 100 lbs., $20.00.

**McCaslan Pole Bean (No. 26)** The finest snap pole bean in existence. Of Georgia origin and thoroughly adapted to all parts of the South for both late summer and spring plantings. Pods long, deep green in color, meaty, stringless and of finest flavor. Color of seed white and the surplus above daily needs allowed to ripen makes splendid dry shell beans for winter use. We only have about 100 bushels of this finest of all pole beans for this fall's sales so order early. Packet, 15 cents; ½ lb., 30 cents; pound, 50 cents; postpaid. Not prepaid, 10 lbs. (peck), $4.00; 60 lbs. (bushel), $15.25; 100 lbs., $35.00.

**Southern Creaseback Pole Bean (No. 11)** White seeded and immensely prolific, especially when planted in late summer; it probably has no equal among shell beans for winter and spring. It quickly becomes stringy and tough so is not very good for shelled but good for dry shelling. Packet, 10 cents; ½ lb., 25 cents; 1 lb., 45 cents; 2 lbs., 65 cents; postpaid. Not prepaid, 15 lbs. (peck), $3.25.

**Small White Pole Lima (No. 9)** Also known as small Lima or "Sieva" bean. A climbing form of the Henderson Bush Lima, and very popular. It's very prolific, a hardy grower for "butter beans" and a continuous bearer of the most tender and delicious beans for the table. Packet, 10 cents; ½ lb., 25 cents; pound, 45 cents; 2 lbs., 75 cents; postpaid. Not prepaid, 15 lbs. (peck), $8.25.

**Lima Bean (No. 10)** The true large lima pole bean. Vigorous grower with extra large greenish white beans. Packet, 10 cents; ½ lb., 25 cents; pound, 45 cents; 2 lbs., 75 cents; postpaid. Not prepaid, 15 pounds (peck), $8.25.

**Jackson Wonder (No. 17)** Most prolific of all bush limas; of Georgia origin and fully adapted to all parts of the South. Flourishes in driest weather and practically drought proof. Flavor rich and delicious. A perfect bush lima bean growing 10 inches to 2 feet high; good for shell beans as well as summer and fall use; splendid for all home gardens. Packet, 10 cents; ½ lb., 25 cents; pound, 45 cents; 2 lbs., 75 cents; postpaid. Not prepaid, 15 pounds (peck), $8.25; 60 pounds (bushel), $12.25; 100 pounds, $20.00.

**Fordhook Bush Lima (No. 33)** Beyond any question the best of the large seeded bush lima varieties. Bushes of strictly erect habit, branching freely, but all the branches held upright. This is a true bush form of what is known as the potato or large, thick seeded bush lima. From four to six days earlier than other varieties of this class. Pods are found in clusters of four to eight and are well filled with delicious large beans that are in quality surpass by far all the other Lima beans. Packet, 10c; ½ lb., 35c; pound, 55c; 2 lbs., 90c; postpaid. Not prepaid, 15 lbs., $4.50.

**Improved Burpee Bush Lima (No. 34)** A true and improved bush form of the large white lima pole bean with extra large seed-beans. Bears heavy crops late in the season. Packet, 10c; ½ lb., 35c; pound, 55c; 2 lbs., 90c; postpaid.

**Henderson Bush Lima (No. 7)** Smallest but most prolific of all the pure white seeded lima varieties, being a true bush form of the small lima or "Sieva," begins to bear with summer planting in about 50 days. It is one of the most popular varieties and a wonderful bush bean for every garden in the South. Very rich, tender and extremely delicious. See Illustration. Packet, 10 cents; ½ lb., 20 cents; pound, 35 cents; 2 lbs., 65 cents; postpaid. Not prepaid, 15 pounds (peck), $8.25; 60 pounds (bushel), $9.25; 100 pounds, $15.00.

**FROST PROOF CABBAGE PLANTS** Early Jersey Wakefield, Largel Charleston Wakefield and Florida. Send in your order now or any time and your order will be booked for shipment after November 20th. For orders for over 500 of the same variety write for special price about November. Seventeen million of these plants have given satisfaction in 1919.
HASTINGS’ SUPERIOR GARDEN BEET SEED

Note The best beet seed in the world is grown in France. The best beet seed growers live in France, and Hastings’ Beet seed of all varieties comes from those best French growers; beet seed which, when planted here in the South, makes the smoothest, cleanest, finest-formed beets that can be grown.

The South does not appreciate, plant and use beets as much as it should. Sown thickly the young plants when thinned out make splendid “greens.” Planted any time up to September 15th they make splendid young beets for fall and early winter use.

Culture has been deeply plowed or plowed. Sow in rows 18 in. to 2 feet apart, scattering seed thinly. In this latitude sow from July to September 15th; in Florida and Gulf Coast sections plantings can be made from September to January. Seed is rough and the soil should be firm or rolled if the ground is dry. When two or three inches high thin out to four or five inches apart in the row. Young beet plants are superior to spinach and turnips for “greens.” In light sandy soils cover seed 2 inches; in stiff clay not over 1 inch. Quantity of seed required. 1 ounce to 50 ft. of row; 6 to 8 pounds per acre. Young beets ready for use in 50 to 70 days, according to variety.

Hastings’ Improved Blood Turnip Beet (No. 45) Most popular variety for home use and nearby markets. An improvement by our growers over the Early Blood Turnip Beet. Color a deep blood red. A fine even form, very uniform in growth, as shown in our illustration from a photograph; medium early and very productive, tender, free from stringiness and very sweet, good for either home or market use and most valuable variety for succession sowings. Packet, 5 cents; ounce, 10 cents; ½ pound, $1.25; postpaid. Ten-pound lots, not prepaid, $1.00 per pound.

Hastings’ Crimson King Of turnip shape, very uniform in size, shape, and color. Sweet and tender and in favorable seasons it has been ready for use in 6 weeks from time of sowing. A splendid all-season beet. Packet, 5 cents; ounce, 10 cents; ½ pound, 35 cents; pound, $1.25; postpaid. Ten-pound lots or over, not prepaid, $1.00 per pound.

Extra Early Egyptian (No. 42) An extra early market beet. A quick grower, producing smooth, rather flattened, turnip-shaped roots. When young flesh is sweet and tender, but becomes stringy when large. Packet, 5 cents; ounce, 10 cents; ½ pound, 30 cents; pound, $1.00; postpaid. Ten-pound lots or over, not prepaid, 85 cents per pound.

The most popular market gardeners’ beet for the South as well as a favorite for home gardens for summer and fall grower. Color a deep blood red, which it retains fully after

Hastings’ Improved Blood Turnip Beet

Hastings’ Eclipse Blood Turnip Beet (No. 40) planting. Fine form, smooth, and free from stringy roots. Small top, rapid being cooked; quality extra fine, very sweet and tender, a heavy beater and its handsome appearance makes it an easy seller when placed on the market either locally or for long distance shipments. Packet, 5c; ounce, 10c; ½ pound, 5c; pound, $1.25; postpaid. Ten-pound lots or over, not prepaid, $1.00 per pound.

Lentz’ Extra Early (No. 50) A splendid variety which is a great favorite in market gardens in certain parts of Florida for shipment to Northern markets. Nearly as early as the Egyptian but larger and of extra fine quality. Color a deep blood red, tender and sweet at all stages of growth. Small top and in favorable seasons can be used in 6 to 7 weeks from sowing. Very productive, a splendid keeper and shipper. If you want a first quality, extra early beet, the Lentz will please you. It has become the leader of all early varieties in the South and its qualities are all that could be desired. Our growers have been breeding this beet for years with the utmost care and we ask that you plant it. Packet, 5 cents; ounce, 15 cents; ¼ pound, 50 cents; pound, $1.50; postpaid.

Long Smooth Blood Beet (No. 49) An old-time favorite in the South. Has long, smooth, blood-red roots growing well down into the soil, enabling it to resist drought and heat. A few of these should be planted in every garden for use after all the other varieties are gone. This beet can be stored or banked for later use, as it keeps well, and although it is large it is of exceptionally good quality and flavor. Packet, 5 cents; ounce, 10 cents; ¼ pound, 35 cents; pound, $1.25; postpaid. Ten-pound lots or more, not prepaid, $1.00 per pound.

Half-Long Blood Beet (No. 44) A favorite for late use, intermediate length between our Improved Blood Turnip Beet and the Long Smooth. Color a deep blood red, smooth and free from stringy roots. In quality it is tender and sweet and remains in good condition for a long time after maturity. Packet, 5 cents; ounce, 10 cents; ¼ pound, 35 cents; pound, $1.00; postpaid. Ten-pound lots or over, not prepaid, 85 cents per pound.

Hastings’ Seed Prices Are Going Down

The war is over and skilled farm labor is more plentiful. The costs of growing many kinds of seeds are lower this year and we believe you will find that Hastings’ Seed Prices are the first to go down. On many seeds we have made much cheaper prices than we could in the spring catalog. We have fine stocks on most all varieties and Hastings’ Service is for our customers. We are not profiteers.
MANGELS AND HALF SUGARS

FOR STOCK FEED THESE BEETS BRING RETURNS

Every year sees an increase in the number of farmers in the South who plant a crop of Mangel or Half-Sugar beets for stock or feeding purposes. It is almost impossible to find crops that will give greater returns for the small amount of work and fertilizer spent on them. Sugar beets and White Belgian carrots are all immense yielders under good cultivation and make an agreeable change of feed for any animal kept on dry forage throughout the winter. In dairy cattle the increased flow of milk and the generally improved conditions of the animals in the spring will show their great value. Have your ground deeply plowed, then well harrowed until smooth. In the Middle South seed should be sown only in the spring, but in Florida and along the Gulf Coast planting can be made throughout the fall and winter. Make rows 20 to 25 feet apart, planting seed at the rate of about 10 pounds per acre. Both the Mangel and Half-Sugar beets are equally profitable for stock feeding. Where their value is known almost every farmer plants from one to ten pounds of seed each year, and they find that it pays them well.

Jumbo Long Red Mangel (No. 41) Largest and heaviest yielder in the South. The desired seed supply of Jumbo Mangel is again short this year. Roots grow from one-half to two-thirds above the surface and are usually fifteen inches to two feet long and four to six inches in diameter. The tonnage, or yield, per acre on rich or well fertilized ground is something immense. The Jumbo Mangel or the White French Half-Sugar Mangel ought to be planted on every farm in the South where cattle are kept. They are certainly the greatest stock feed you can find and the increased flow of milk through the winter makes the growing and feeding well worth your while. One pound, 10 cents; 1/4 pound, 25 cents; pound, 75 cents, postpaid. In 10-pound lots or over, not prepaid, 60 cents per pound.

White French Half-Sugar Mangel (No. 51) We would have a difficult task if we had to make a choice between this and the Jumbo Long Red Mangel. Our inclination is always to plant some of both. While possibly not quite as heavy a yielder per acre as the Jumbo Long Red, its greater sugar content makes it especially valuable in fattening cattle and insuring a flow of rich milk in dairy or milk cows. It is as easily grown in the South as the garden variety of beet and should be let grow until frost to secure the largest yields. Roots are very large, smooth clean skin, of oval shape and grow about two inches in diameter. Most of the half-sugar beets are grown and consequently are more easily pulled. We recommend a general planting of both this and the Jumbo Mangel for they are both worth while on any farm where cows are kept. One pound, 10 cents; 1/4 pound, 25 cents; pound, 75 cents; postpaid.

Swiss Chard Beet or Sea Kale (No. 43) Probably no vegetable is coming into popular favor more rapidly than Swiss Chard or Sea Kale as it is frequently called in Europe. It is grown for its leaves only as it does not make a bulbous, edible root like the other varieties. The leaves grow large and upright and as the outer leaves are cut more come from the center. The mid-rib or center stem of each leaf is very tender and almost white and after trimming can be cooked and served like asparagus. The leaf part can be cooked like spinach or turnip greens or if desired the whole leaf can be boiled and served as "greens." There is a delicious, delicate flavor not found in either turnips or kale. Packet, 5 cents; oz., 15 cents; 1/2 lb., 50 cents; lb., $1.00; postpaid.

BRUSSELS SPROUTS

A very highly esteemed member of the cabbage family, especially desirable for late summer and fall planting in Florida and the Gulf Coast section. The "sprouts" are miniature cabbages, growing closely on the stalk of the plant, a small head being formed at each leaf joint. Plants are quite hardy and live through the winter in all parts of the Lower South. Quality and flavor are much improved by frost. Sow seed in July, August or September and when plants are four to six inches high transplant to open ground, like cabbage.

Improved Dwarf Brussels Sprouts (No. 59) The most desirable variety for the South, producing compact "sprouts" of the very best quality. Packet, 10 cents; oz., 35 cents; 1/2 lb., 60 cents; 1 lb., $1.00; postpaid.

BROCCOLI

A vegetable very closely related to cauliflower, from which it is supposed to have come. In culture it is the same as that for cauliflower, and in the Southern States, unless you are an expert cauliflower grower, Broccoli will make a super heading for you. There are many claims kept from growing cauliflower by the high price of the seed. To those we recommend Broccoli. The Cape Broccoli is the best type for the South and you will do well to have it in your garden this year. Packet, 15 cents; ounce, 75 cents.

PLANT A REAL GARDEN THIS FALL

Money saving and health saving are both worth while and the right kind of a good home garden this fall with a dozen or more kinds of vegetables in it is both a money and health saver. Every mess of vegetables from the garden that takes place of food bought at the store knocks holes in your bill at the merchants.

Every mess of vegetables from the garden helps tone up the system, making unnecessary both drug store bills and trips to see the doctor.

Give the 1910 fall garden a square deal and see what it will do for you in better health and money saving.

You should have something you can eat from the garden every day in the year. The Hastings' garden is this kind of garden. Is yours?
CABBAGE

Cabbage seed in the United States is about as scarce as a square meal in the war stricken countries of Europe. Partial crop failures for several years in the United States, coupled with the cutting off of cabbage seed from Europe has produced a positive cabbage seed famine. As a matter of fairness to all we ask you to buy just as little cabbage seed as you possibly can get along with and use the very best care in planting. Some varieties are entirely sold out, the others we can only offer in limited quantities.

Hastings' Genuine Surehead (No. 120) Probably the most popular and most generally planted in the South of all varieties of cabbage. It is the result of a cross between Early Flat Dutch and one of the Drumhead varieties, resulting in a superb medium sized hard heading cabbage of mid-season maturity, coming in between the Wakedul and the late Flat Dutch varieties. Surehead is an exceptionally good variety for late summer and early fall plantings in Florida and Gulf Coast sections for maturing in winter. A very vigorous grower and very uniform in size, shape and color. Packet, 10 cents; ½ ounce, 20 cents; ounce, 35 cents; ½ pound, $1.25; pound, $4.00.

Hastings' Sure Crop (No. 104) An excellent variety for the large round flat varieties. For twenty-three years we have sold this variety to thousands of our customers in all parts of the South and they have been fully satisfied. Equally good for home use or shipment. On good rich soil with a late fall planting it makes heads weighing from 8 to 12 pounds. Very firm and solid, uniform in shape and well flattened. Quality is most excellent, being crisp and tender and when rightfully cared for scarcely a plant fails to form a good head. Color a dark green, holding up well after being cut. Good late summer variety. Packet, 10c; ½ ounce, 20c; ounce, 35c; ½ pound, $1.25; pound, $4.00; postpaid.

PLANT A REAL FALL GARDEN

Hastings' Centennial Flat Dutch Cabbage

(No. 110) This is beyond question the best of the large cabbages for planting for winter and spring maturity in the South. It is both a heat and cold resisting sort and its exceedingly great vigor in growth makes success under conditions where other varieties fail. Has proven very resistant to winter freezes. It is a large, well flattened type of cabbage that holds up fine in long-distance shipping. On very rich soil there is a tendency to grow too large, but this is easily controlled by rather close planting. A fine variety for both home and market gardeners. See illustration below. Packet, 10c; ½ oz., 20c; oz., 35c; ¼ pound, $1.25.

Stein's Early Flat Dutch

(No. 125) A very popular variety for South Texas and Gulf Coast sections. Just a little later than the Early Dwarf Flat Dutch but larger and firmer. Holds in good condition for a long time after being cut. Desirable for both market and home gardening. Packet, 10c; ½ oz., 20c; oz., 40c.

Early Summer

(No. 122) Probably none of the older varieties of cabbage retain their popularity as does the old favorite—Early Summer. It's a splendid second early cabbage coming in ten days to two weeks later than the Jersey Wakefield. It has a medium sized head, very uniform in size and shape and of extra good flavor. While known principally as a cabbage for spring planting it does splendidly planted in the South in the late summer and fall. Packet, 10c; ½ oz., 35c; ¼ lb., $1.25.
Hastings’ Long Island Wakefield Cabbage (No. 105) Large.

Largest, earliest and surest header of any of the Wakefield varieties. Earlier, larger and firmer than other strains of Charleston Wakefield, 1 1/2 to 2 pounds heavier, firmer, better shaped and more solid than our selected Early Jersey Wakefield, in good and favorable weather conditions it is often ready for use in 50 days from transplanting. It is the right variety for those desiring the best pointed cabbage. It makes a splendid early cabbage for home use. Seed of Wakefield varieties especially short. Packet, 15c; 1/2 oz., 30c; oz., 50c; 1/4 lb., $1.50; pound, $5.00; postpaid.

Selected Early Jersey Wakefield (No. 106) Almost every one knows the popular Early Jersey Wakefield. Compared to few know the superiority of our strain of this variety. It grows with the greatest care, and a well-cultivated crop shows the greatest regularity in size, shape and solidity. If you are growing the Early Wakefield you cannot afford to be without our select seed. It pays to use it. Packet, 15c; 1/2 oz., 30c; oz., 50c; 1/4 lb., $1.50; lb., $5.00.

Early Winningstadt (No. 104) An old favorite variety planted almost entirely for early family use. Heads weigh 1 1/2 to 2 lbs. and are pointed. Packet, 10 cents; 1/2 ounce, 30 cents; ounce, 50 cents.

Succession (No. 116) Medium to large size, solid and a reliable header, long a favorite with Southern market gardeners and shippers. A good second early and is a splendid general-purpose cabbage for fall plantings. Packet, 10c; 1/2 oz., 25c; oz., 40c; postpaid.

All Seasons (No. 100) As improved by us during the past few years, is a most valuable cabbage for the South. Heads are large and solid, flattened on the bottom. Good and upright plants and resists heat and drought well. Premier Brand Seed. Packet, 10c; 1/2 oz., 20c; oz., 35c; 1/4 lb., $1.50.

Blood Red Erfurt (No. 117) Best red cabbage for the South. Medium size and a sure header. Most largely used for pickling purposes. Packet, 10c; 1/4 oz., 25c; oz., 40c.

All-Head Early (No. 121) Our “All-Head Early” is an early flat headed variety that is a sure header with half a chance and is well named on account of its few outer leaves and medium sized, very firm solid heads. About one week earlier than the old favorite “Early Summer” and is the finest in existence for this type. Seed stock is extremely limited. Packets only, 15 cents each.

Chinese or Celery Cabbage

Pe Tsai (No. 126) This variety has attained great popularity in California as well as in many parts of the East where it is used in salads like celery, or cut up like cabbage in cold slop.

Our experience shows that Chinese Cabbage had best be planted in early fall in Florida and Gulf Coast sections for it quickly runs to seed when maturing in hot weather.

Properly speaking it does not belong to the cabbage family as we know it and does not assume the celery-like form as shown in our illustration unless the plant as it grows is hanked up or the leaves tied up over the center to hold it in upright position and bunching the inner leaves and leaf stems. If left to grow without banking or tying up the leaves will spread out somewhat like Cos or Romaine lettuce.

Failure to hank up as described above has led to disappointment for those growing it the first time. It grows quickly and makes a large yield on anything like good soil piece of low, moist rich, garden ground will usually give good results.

Drill seed in thinly in rows two feet apart, thinning plants to 6 inches in the row when well up. Packet, 10 cents; 1/2 ounce, 20 cents ounce, 35 cents; 1/4 pound, $1.00; pound, $5.00; postpaid.
CAULIFLOWER

We import all of our Cauliflower seed direct from the most reliable growers in Europe. No Cauliflower seed of any value is produced in the United States. We furnish you the highest grade of seed and do not charge you from 50c to $1.00 per ounce extra for Red, Yellow or Blue Seals on package.

Culture Does best in rich, well-tilled soil; will do in a well-manured soil. Sow in seed bed at same time as cabbage. Transplant when 3 or 4 inches high: give plenty of water in dry weather. Keep wet, hoe thoroughly and often. In Florida and along the Gulf sow the seed in September, October and November.

Our Gilt Edge (No. 85)

We introduced Gilt Edge Cauliflower in the South in 1893. Since that time we have watched all new introductions closely, and we have not found in the last 20 years a variety that comes anywhere near being its equal, for either fall or spring planting.

"Gilt Edge" is rightly named. It is "Gilt Edge" in every respect. It is the largest, most perfect and surest header of all the early varieties, and in quality it is unexcelled. One specimen was sent to our store by a gardener which, when the leaves were trimmed off, weighed 7 lbs. and 8 oz., the largest head of early cauliflower we have ever seen in the South.

In general appearance, Gilt Edge is like the Snowball, but is much larger, a sure header, and stands much longer without decay than any other. Cauliflower should be more generally grown in the South than it is, and there is no variety equal to Gilt Edge where a sure crop of the finest quality is wanted.
Packet, 10c; ¼ ounce 85c; ½ ounce, $1.00; ounce, $2.50; ¾ pound, $10.00; pound, $38.00.

A fine early variety, second only in value to the Gilt Edge. The amateur and private gardener find it equally valuable with the market growers at all seasons.

Early-Snowball (No. 86)

We introduce this variety, which is justly famous for its sweetness and size.
Packet, 10c; ¼ ounce, 85c; ½ ounce, $1.00; ounce, $2.50; ¾ pound, $10.00; pound, $38.00.

Endive Early Green Curled (No. 193) — The best variety. When nearly grown tie up or shade heads while dry for blanching.
Packet, 5c; ounce, 15c; ¼ pound, 40c; pound, $1.25.

Cress Water (No. 132) — Packet, 10c; ounce, 40c; ¼ pound, $1.25. Extra Curled or Improved Pepper Grass — Tastes same as Water Cress. Extra Curled (No. 132) — Packet, 5c; ounce, 10 cents; ¼ pound, 25 cents.

Corn Salad or Fetticus

Large Green Cabbaging (No. 194) — This is used for salad dressing during winter and spring. We find it does best sown in drills 9 inches apart. Packet, 5c; ounce, 10c; ¼ pound, 50c; lb., $1.00.

COLLARDS

A great many people look upon the lowly collard, or "Georgia Cabbage," as some jokingly refer to it, as something not worth while growing. Now there are thousands of collard patches scattered over the South, and most Southern people like them. The collard is an old-time favorite adapted to all parts of the South, and as a producer of "greens" for boiling in winter and spring it has no equal. It will pay you to have a collard patch just to give your cows an occasional taste of "green stuff." Sow any time up to September 15th. When plants are 6 inches high transplant to open ground, setting plants 2 feet apart in the row. Cultivate like cabbage and sow one ounce of seed to 200 feet of row. Cabbage seed is high and scarce this year and collards is a fine substitute.

Southern or Georgia (No. 135) This variety is the old time favorite. Stands all sorts of adverse conditions without injury. Is very hardy, standing winters as far north as Atlanta. In many places where the soil is too poor to grow cabbage, the collard grows easily and makes a good substitute for cabbage. Packet, 5c; ounce, 10c; ¼ pound, 25c; lb., 75c.

Early-Snowball (No. 86)

The amateur and private gardener find it equally valuable with the market growers at all seasons.

Our Gilt Edge (No. 85)

We introduced Gilt Edge Cauliflower in the South in 1893. Since that time we have watched all new introductions closely, and we have not found in the last 20 years a variety that comes anywhere near being its equal, for either fall or spring planting.

"Gilt Edge" is rightly named. It is "Gilt Edge" in every respect. It is the largest, most perfect and surest header of all the early varieties, and in quality it is unexcelled. One specimen was sent to our store by a gardener which, when the leaves were trimmed off, weighed 7 lbs. and 8 oz., the largest head of early cauliflower we have ever seen in the South.

In general appearance, Gilt Edge is like the Snowball, but is much larger, a sure header, and stands much longer without decay than any other. Cauliflower should be more generally grown in the South than it is, and there is no variety equal to Gilt Edge where a sure crop of the finest quality is wanted.
Packet, 10c; ¼ ounce 85c; ½ ounce, $1.00; ounce, $2.50; ¾ pound, $10.00; pound, $38.00.

A fine early variety, second only in value to the Gilt Edge. The amateur and private gardener find it equally valuable with the market growers at all seasons.

Early-Snowball (No. 86)

We introduce this variety, which is justly famous for its sweetness and size.
Packet, 10c; ¼ ounce, 85c; ½ ounce, $1.00; ounce, $2.50; ¾ pound, $10.00; pound, $38.00.

Endive Early Green Curled (No. 193) — The best variety. When nearly grown tie up or shade heads while dry for blanching.
Packet, 5c; ounce, 15c; ¼ pound, 40c; pound, $1.25.

Cress Water (No. 132) — Packet, 10c; ounce, 40c; ¼ pound, $1.25. Extra Curled or Improved Pepper Grass — Tastes same as Water Cress. Extra Curled (No. 132) — Packet, 5c; ounce, 10 cents; ¼ pound, 25 cents.

Corn Salad or Fetticus

Large Green Cabbaging (No. 194) — This is used for salad dressing during winter and spring. We find it does best sown in drills 9 inches apart. Packet, 5c; ounce, 10c; ¼ pound, 50c; lb., $1.00.
HASTINGS’ CARROT SEED

PRICES INCLUDE PAYMENT OF POSTAGE

Culture Carrots deserve a more general cultivation in the South. The young, tender roots are excellent stewed or boiled, either alone or with meat, as well as for seasoning and for flavoring soups. Select rich or well manured soil worked deep to allow the roots to penetrate the soil without difficulty. Saw 1 ounce of seed to 100 feet of row in shallow drills, 16 to 18 inches apart, in August and September. In Florida and along the Gulf Coast sow from September to December. Make several sowings about two weeks apart so you will have a succession crop. When plants are well started, thin out to four inches apart in the row. Cultivate frequently, keeping the ground free from weeds and grass.

Chantenay (No. 65) This new stump rooted variety we consider the best of its class. It’s a half-long sort unexcelled in quality and productivity. Very uniform in growth. Flesh deep golden orange color. Roots 3 inches in diameter and about five inches in length, gradually tapering in a very symmetrical manner to the base. Packet, 5 cents; ounce, 10 cents; ½ pound, 35 cents; pound, $1.25.

Red St. Valery (No. 67) and regular in growth, of large size, from 10 to 12 inches in length, and from 2 to 3 inches in diameter at the top, tapering gradually throughout. Rich, deep coloring, and from the market's favor with many of our customers, especially in sections subject to drought. Packet, 5 cents; ounce, 10 cents; ½ pound, 30 cents; pound, $1.00.

Half-Long Scarlet (No. 71) A favorite with market gardeners and for home use. Both roots and tops are of fine flavor. Packet, 5 cents; ounce, 10 cents; ½ pound, 30 cents; pound, $1.00.

Danvers’ Intermediate (No. 68) Bright orange color, very smooth and finely formed. Produces more weight to the acre than any other half-long variety. Packet, 5 cents; ounce, 15 cents; ½ pound, 35 cents; pound, $1.25.

Improved Long Orange Old, well known variety. Roots long and of a deep rich orange color. A very heavy cropper, so heavy in fact that it is profitable to grow for stock feed, although in quality it is a table carrot. Packet, 5 cents; ounce, 15 cents; ½ pound, 35 cents; pound, $1.25.

Large White Belgian Carrot (No. 76) The value of root crops for stock is just beginning to be appreciated in the South. Central South they are easily kept all winter. In Florida they can be left in the ground all winter and pulled as needed. The use of carrots in connection with dry feed helps keep the animals in good condition, and in milk or dairy cattle the flow of milk is largely increased. One thing must be remembered when these crops are wanted and that is that the soil must be fed with manure or commercial fertilizers in proportion. Sow in drills 3 feet apart, using 4 pounds of seed per acre. When well up thin out the plants to 6 inches apart. They should be grown on land that has been previously cultivated and worked deeply. Give thorough cultivation throughout the season. Packet, 5 cents; ounce, 15 cents; pound, $1.00; postpaid.

Celery why it should not be as largely and successfully grown in Southwest Texas as a market crop.

Culture Celery requires rich and moist soil. If not rich it can be made so by proper fertilizing. For late summer and fall planting celery is strictly a crop for Florida and the lower Gulf Coast country, sections not ordinarily subject to extreme cold during the winter. It is a most important commercial crop for Florida and there is no reason why it should not be grown as thoroughly as in the North. Celery planted as above should be ready for market in following March and April. This crop frequently brings in as high as $1,500.00 per acre.

GOLDEN SELF-BLANCHING (No. 77) French Grown Seed A variety for market gardeners. Any but French grown seed of this variety is worthless. We have imported seed direct from originator. Packet, 10 cents; ½ ounce, 40 cents; ounce, 75 cents; ½ pound, $2.50; pound, $8.00. Price has been as high as $25.00 a pound for same quality.

Savannah Market (No. 78) One of the finest varieties for general planting in the South on the lighter classes of both sandy and clay soils. Strong, vigorous grower and will make a large crop where other sorts fail altogether. Large, solid and of first-class flavor. Stalks when well blanched are white and centers are light golden yellow. When quickly grown it is crisp and tender. Good appearance in market. Not recommended as a market variety for shipping from Florida. Packet, 10 cents; ounce, 15 cents; ½ pound, 50 cents; pound, $1.50.

Mexican Solid Celery (No. 80) Stalks rounder, crisp and solid. Its flavor is fully equal to that grown in the famous Kalamazoo (Mich.) celery district, having the rich, nutty flavor so desirable in celery. Packet, 10 cents; ounce, 15 cents; ½ pound, 50 cents; pound, $1.50.

White Plume (No. 76) -- Giant Pascal (No. 79) Old, well-known varieties, preferred by many planters. Packet, 10 cents; ounce, 15 cents; ½ pound, 50 cents; pound, $1.50.

Celeriac (No. 75) or Turnip Rooted Celery. It is mostly used for flavoring. Cultivate the same as for celery except that it requires no hilling up. Packet, 5 cents; ounce, 15 cents; ½ pound, 50 cents.
Hastings' Best Cucumber Seed

There has been a steady increase in the planting of cucumbers all over the South in summer and fall during late years, and limited fall plantings are usually found to be more profitable in climate than earlier in the season. In Florida and the Gulf Coast, April and May plantings are profitable, but in the North, planting in June and August is advisable. See page 28.

Culture
Plant in hills, four feet apart each way. Where well-rotted manure is obtainable work a large shovelful of it into each hill. Plant 8 to 10 seeds in each hill, covering ½ inch in clay soils or 1 inch in sandy soils, and when rough leaves have formed thin out to 4 in each hill. One ounce of seed will cover 100 hills, or use 2 pounds per acre.

HASTINGS' WHITE SPINE (No. 180)
The one best variety of cucumber for the truck-farm, field gardens, and family garden. This is a favorite with farmers in many parts of the South. This variety is a hardy variety with the same size and shape of Florida and Texas. It is almost seedless, having a very attractive dark green variety with a green that stays for days after being picked and shipped. The fruits are 7 to 8 inches long and 2 to 2½ inches wide. Extra early, very crisp, and unsalted for slicing. When young, excellent pickles. Prolific, very hardy and a sure cropper. Packet, 5c; ounce, 10c; ½ lb., 30c; pound, $1.00; postpaid. Ten-pound lots, not prepaid, 85c per pound.

THE KLONDIKE CUCUMBER
When the Klondike was originally introduced we were much impressed with many of its good points, but it was so irregular that we did not care to catalogue it until it had been bred up to a satisfactory strain. We now have a strain of home gardeners in size, color, and shape, and we are sure that you will be pleased with it. It has a very attractive dark green variety with a green that stays for days after being picked and shipped. The fruits are 7 to 8 inches long and 2 to 2½ inches wide. Extra early, very crisp, and unsalted for slicing. When young, excellent pickles. Prolific, very hardy and a sure cropper. Packet, 5c; ounce, 10c; ½ lb., 30c; pound, $1.00; postpaid. Ten-pound lots, not prepaid, 85c per pound.

Davis Perfect Cucumber (No. 179) An almost ideal cucumber in shape, rich dark green color; it is uniform and regular in size; exceedingly tender and a favorite on the table. This is a favorite with shippers in some parts of Florida and Texas. It is almost seedless one-third of its length from the stem end, and the seeds that are contained in it when in slicing condition are so small and tender that they are almost unnoticeable. It is an exceedingly prolific variety. Packet, 5c; ounce, 10c; ½ pound, 30c; pound, $1.25; postpaid. Ten-pound lots or over, not prepaid, $1.00 per pound.

Early Fortune Cucumber One of the most recent introductions, and is very much liked by market gardeners in parts of Florida and Texas as a variety for shipment to Northern markets during the fall months, holding as it does its dark green color for many days after picking. Early Fortune is of a very deep green color and does not show up much when the color before maturity of the rich green of the White Spine. Stays plump and fine looking long after reaching markets in the North. It is of good shape and of very regular growth. Packet, 5c; ounce, 10c; ½ pound, 30c; pound, $1.00; postpaid. Ten-pound lots or over, not prepaid, 85c per lb.

Improved Long Green (No. 181) One of the old time favorites of the South. Fruit long, extra large, good size, and holds the deep green color well. Best for all purposes. A very popular variety for all purposes. Packet, 5c; ounce, 10c; ½ pound, 30c; pound, $1.25; postpaid.

JAPANESE CLIMBING CUCUMBER (No. 185) The most perfect climbing cucumber known, being a specially vigorous grower. The young plants are bushy, but as soon as they become well established begin to climb and may be grown on trellises, poles or trellises for support. The product of the plant in a given area can be increased three-fold. Fruit is 10 to 12 inches in length, of a fine dark green color; flesh is thick and firm, never bitter, has few and very small seeds and is fine for pickling as well as slicing. It is a very prolific variety and the fruits are perfect in shape and the finest size color and cleanest for pickling. The vines are practically proof against mildew and continue bearing until very late. Packet, 10 cents; ounce, 15 cents; ¼ pound, 50 cents; pound, $1.50; postpaid.

Our Everbearing Cucumber This is our most popular variety for home gardeners on account of its everbearing character; first fruits are ready very early, then the vines continue to flower and produce fruits continually until killed by frost. Whether the fruit is cut or the cucumbers are picked or the cucumbers are picked is this respect from all varieties. A single vine would show at the same time cucumbers in every stage of growth. Splendid for slicing although size is rather small, but they are perfect in shape and are fine size color and cleanest for pickling. Packet, 5 cents; ounce, 10 cents; ¼ pound, 35 cents; pound, $1.25; postpaid.

Lemon Cucumber (No. 174) The most prolific and finest flavored of all cucumbers; size and shape of lemon. Packet, 10 cents; ounce, 20 cents; ¼ pound, 65 cents; pound, $2.00; postpaid.

Giant Pera (No. 176) Fruits sometimes 15 to 20 inches long. Largest of all. Packet, 10 cents; ounce, 15 cents; ¼ pound, 45 cents; pound, $1.25; postpaid.

Early Frame (No. 182) A fine, well-known variety. Early Frame is a desirable variety for home gardens for slicing. Packet, 5 cents; ounce, 10 cents; ¼ pound, 35 cents; pound, $1.25.

Chicago Pickle (No. 183) Chicago Pickle is a standard pickling variety, but can be sliced if allowed to mature. Packet, 5 cents; ounce, 10 cents; ¼ pound, 35 cents; pound, $1.25.

Early Green Cluster (No. 178) Standard, well-known variety for both pickling and slicing. Packet, 5 cents; ounce, 10 cents; ¼ pound, 35 cents; pound, $1.15; postpaid.
HASTINGS' EGGPLANT

While this is a crop mostly grown from winter and spring sown seed in most localities it has been found a most satisfactory and profitable crop for late fall and winter shipment from South Florida. For October to January shipment seed should be sown from July to September. The results from one or two of eggplant planted in Florida at that season is often surprisingly satisfactory. It is usually customary to plant ½ pound seed to furnish plants for 1 acre.

Hastings Improved Large Purple Thornless Eggplant (No. 190) This variety is the standard for purity and excellence for Eggplant in all the market gardening sections of the South. It has been grown for 23 years by market gardeners with profitable results and in the home gardens with entire satisfaction. Our seed is pure and the plants thornless. There is no crop we exercise more care in and in which our constant and continued selections show better results. In a properly cultivated crop streaked or off-colored fruit is almost unknown. Plants are large, strong and vigorous, each plant producing from 5 to 8 large fruits of dark, rich purple color. The earliest of all large fruited varieties and always gives satisfaction with proper cultivation, and the vigor and strength of this variety makes it less subject to the effect of "blight" and "dieback" which is disastrous to this crop in so many sections. Notice the illustration from an actual photograph of this best of all eggplants. Packet, 10 cents; ½ ounce, 35 cents; ounce, 5 cents; ½ lb., 15 cents; lb., $1.00.

Florida High Bush (No. 189) Desirable for home gardens. "Eggs" are borne higher off the ground, which is advantageous against "rot" and "blight." Plants strong, prolific, and of very fine quality; best for slicing. Dark purple in color, uniform in size and shape, thin skin and no waste in solid flesh. Packet, 10 cents; ½ ounce, 25 cents; ¼ pound, 80 cents; postpaid.

Early Purple Eggplant (No. 188) An old elongated early fruiting variety for home use only. Packet, 10 cents; ½ ounce, 20 cents; ounce, 5 cents; ½ pound, $1.25; pound, $1.00; postpaid.

KALE OR BORECOLE FOR WINTER GREENS

We sincerely wish we could get our friends to grow Kale more extensively, as it is so much superior in eating qualities to the collard. Kale is more hardy than cabbage and will stand through the entire winter in any ordinary season in the central and lower South. It is much improved in quality by being touched by frost. Of all the cabbage tribe this is the most finely flavored, and it would be more generally grown were it good qualities more widely known. Sow the seed thinly in drills in September and October and you should have no trouble in gathering the finest flavored "greens" you have ever eaten—Try Kale this fall and you will be sure to include it in your order hereafter. It is a favorite vegetable to furnish "greens" in the South during winter and spring, and for that use there is nothing better.

Early Green Curled (No. 200) Also variously known as "Dwarf German," "Dwarf Curled Scotch" and "Sheridan." This is the variety usually sown in the fall for spring use. It is rather low growing, with fine curled leaves of deep green color. The young leaves are tender and delicate in flavor. Packet, 10 cents; ounce, 20 cents; ¼ pound, 60 cents.

Kohl-Rabi This splendid vegetable should be better known in the South, for it is a most desirable one. It's sort of half way between a cabbage and a turnip. While it has many of the characteristics of the cabbage family the edible part is the bulb (as shown in our illustration) that forms above the ground. In the lower South and Florida it can be easily grown with August to October sowings. Seed can be sown thinly in rows where plants are to stand and thinned to six inches apart or else sown in beds and transplanted like cabbage. Successful sowings about a month apart will keep up a continuous all season supply.

The bulbs which grow to the size of a medium sized apple have a delicate cabbage-like flavor that you will like.

Early Purple Vienna Kohl-Rabi (No. 204) The best variety. The size of an apple when ready for use, and are of a pale purple color. They have a delicate, cabbage-like flavor. Packet, 10 cents; ounce, 30 cents; ¼ pound, 90 cents; pound, $3.00.

LEEPS

The leek is a very hardy onion-like plant that does not make a bulb. It has a long, well thickened neck somewhat resembling the growth of young onions in spring but much longer and thicker. The leek thrives under some general conditions as onions and should be cultivated in the same general manner except that when the plants begin to get some size the earth should gradually be drawn up around the neck so as to Blanch the stems or necks white and increase the tenderness and fine flavor.

Large Carenten Grows to large size, the stems being proportionately large and thick. In rich soil, well earthed up, the edible portion is from 6 to 8 inches long by 2 to 3 inches in diameter. Packet, 10 cents; ½ ounce, 15 cents; ounce, 35 cents.

GOOD GARDENS CUT STORE BILLS
Hastings’ Lettuce Seed For Home and Market Crops

Lettuce seed is one of our great specialties, and in addition to supplying over two hundred thousand family gardens each year we sell thousands of pounds of highest grade lettuce seed to shippers and market gardeners. Our four great market varieties, BIG BOSTON, FLORIDA HEADER, DIXIE HARD HEAD and CALIFORNIA CREAM BUTTER have no equals. The high quality of HASTINGS’ Lettuce Seed is known everywhere in the South where lettuce is grown, for purity, hardness of heads and slowness to run to seed. Our lettuce seed is all grown in California by the most careful lettuce seed grower in the world, and the growing crops are personally inspected by our Mr. Hastings or Mr. Freeborn, so as to insure the quality being kept up to the HASTINGS’ standard. Do you know of any seed firm where the head of the house, or even an employee, will travel over 6,000 miles each year to see that every possible care is taken to have the lettuce seed just right? We have a wonderful stock of BIG BOSTON Seed for this summer.

One End of a Field of BIG BOSTON Lettuce Ready for Shipment—Note the Regularity of Growth—Right Seed Does It

BIG BOSTON (No. 210) The illustration shows a field of lettuce from our Big Boston Seed. It is perfection in that variety, and you cannot buy any Big Boston Lettuce at any price that is superior to our strain. The heads of this strain are so firm and solid that almost every head has to be cut open before the seed stalks can grow. It is a standard market garden and shipping variety, being grown almost exclusively in many sections for shipment and for market. Extra large, round, firm heading variety, and makes a good appearance in market. Our seed of this variety is grown for us by a lettuce seed specialist whom we consider the best in the world. Our seed of Big Boston is the purest and hardest heading stock that you can obtain. Packet, 5c; ounce, 15c; ½ pound, 40c; pound, $1.25; postpaid. 5-lb. lots or over, $1.00 per lb., not prepaid.

HASTINGS’ DRUMHEAD WHITE CABBAGE LETTUCE (No. 211) One of our earliest introductions, and no variety that we have ever carried has had a steadier sale. It is not a shipping variety, but belongs to the crisp leaved class. Superb for home gardens and nearly markets. When properly grown it reaches large size. One gardener near Gainesville, Florida, produced a single head weighing nearly 4 pounds. It is always large, with outer leaves a clear, light green color, inside of the head almost pure white. Leaves are large, extra crisp and tender and entirely free from all bitter taste. Fine for summer and fall planting in all parts of the South. Packet, 5 cents; ounce, 20 cents; ½ pound, 65 cents; pound, $1.00; postpaid.

HASTINGS’ ICEBERG LETTUCE (No. 216) A beautiful as well as useful variety. Exceedingly crisp and tender, growing a long time before running to seed. Known as a “crisp leaved” hard header. Splendid for either open ground planting or for forcing under glass. Heads of conical shape and medium size. Heads tightly fold and blanch to a beautiful white. Outer leaves wrinkled and light green, growing closely up around the head. Packet, 5 cents; ounce, 20 cents; ½ pound, 65 cents; pound, $2.00; postpaid.
Hastings' Florida Header (No. 215)
Florida Header is one of our favorites that has stood the test of time. We have sold it for 23 years, and it is recognized as one of the leading varieties for either market or home use. No other variety exists for anyone who wants large, solid heads; heads quickly, yet is slow to run to seed. Very resistant to both heat and cold, passing through severe freezes practically unharmed. Crisp and tender, and its fine appearance adds greatly to its selling qualities. In field tests it held up over two weeks over Big Boston before running to seed. Packet, 5 cents, ounce, 15 cents; 1/4 pound, 40 cents; pound, $1.25; postpaid. Five pounds, not prepaid, $5.00.

Hastings' Superba
The biggest lettuce of all, a most beautiful, solid, extra large heading variety, especially resistant to heat. Outside leaves light green, becoming more and more yellow towards the center. Especially desirable for home gardens and nearby markets, but not for shipment. For crispness, tenderness and freedom from bitterness it is unequalled. Packet, 5 cents; ounce, 15 cents; 1/4 pound, 50 cents; pound, $1.50; postpaid.

New Dixie Hard Head Lettuce

New Dixie Hard Head Lettuce (No. 221) It is such a hard header that it is very difficult to get it to produce seed. Each year we are more and more impressed with its great value, both for the home and market gardener. In general character of growth and appearance it is much like the California Cream Butter, but is a much harder header, presents better appearance in market, and is slower than any other variety to run to seed. Heads large and solid. Packet, 5c; ounce, 20c; 1/4 lb., 65c; lb., $2.00; postpaid. 5 lbs., not prepaid, $9.00.

California Cream Butter (No. 220)
Also known as "Royal" in some localities. Good for open ground planting at all seasons in the South. Fine variety for market gardeners and shippers. Heads large and solid, the inside bleaching to a beautiful cream yellow when properly grown. The pure strain of this variety can be distinguished by the small spots on the outer leaves. Our stock is strictly high grade and of the purest strain, grown on the California seed farm that is noted for the production of high quality seed of this variety. You will be delighted with this sweet, juicy lettuce. Packet, 5c; ounce, 20c; 1/4 pound, 65c; pound, $2.00; postpaid.

Well Known Varieties of Lettuce
Grand Rapids (No. 214), Improved Hansen (No. 225), Prize Head (No. 219), B. Seeded Simpson (No. 223), All-Year-Round (No. 224), Philadelphia Butter (No. 218). Each, packet 5c; oz., 15c; 1/4 lb., 50c; lb., $1.50; postpaid. Brown Dutch (No. 213), bronze leaf: Pkt., 5c; oz., 15c.

White Paris Cos
Celery Lettuce. Crisp, tender leaves and delicate flavor. Packet, 5 cents; ounce, 15 cents; 1/4 pound, 50c; pound, $1.50; postpaid.
BERMUDA ONIONS

A Money Making Vegetable Crop For the South

Hastings' Crystal Wax Bermuda Onion—Pure Waxy White—The Most Attractive Onion in the World—See Next Page

$100.00 to $600.00 Per Acre Clear Profit
Send For Our Valuable Special Pamphlet On Bermuda Onion Culture

Every year we have hundreds of letters asking for information about this crop, and we have prepared a new and up-to-date pamphlet on Bermuda Onion Culture. It gives the methods of the most successful growers, both with and without irrigation. It takes up fully the subjects of preparation of soil, fertilizing, cultivation, seed-beds, transplanting, harvesting, and packing. It takes up the whole subject and gives all the information necessary to enable the careful grower to make a successful crop.

No seed firm in this country has been in such close contact with the Bermuda Onion industry as we have or is in better position to give you information covering the growth of this crop under the different conditions existing in the various Southern States. This crop is being grown successfully and profitably in every Gulf State and there is plenty of room for thousands of acres more in these States, both for home markets and shipment.

Onions cannot be grown with the same careless cultivation as cotton or melons or beans, but for the grower who is willing to give an onion crop the care it needs, no more profitable vegetable crop can be found. Enormous yields can be made, Florida reporting 700 bushels per acre, with Georgia, Alabama and Mississippi not far behind that. This pamphlet is free. It shows how growers have cleared $100.00 to $600.00 per acre net profit. You can do likewise.

THE MILLION DOLLAR CROP FROM HASTINGS' SEEDS

We Started Bermuda Onions as a Crop

Some 28 years ago we began talking Bermuda Onions as a commercial crop. We knew the Bermuda Onion and had full confidence that, once it became known, there would be a market for it that would put hundreds of thousands of dollars in Southern truck growers' pockets. The development of this great industry in Texas, Florida and other states has justified our judgment fully. It is now one of the great Southern vegetable crops, the safest, surest vegetable crop a man can plant right on year after year. It has reached its greatest development in Southwest Texas where, during the shipping season, solid train loads of Bermuda Onions leave daily for Northern and Eastern markets.

While Texas is the most important Bermuda onion growing state, this crop is assuming larger proportions each year in Florida, California, Louisiana, Mississippi, Alabama and Georgia.

This development of a new and great industry has been possible through genuine, good, unmixed seed obtained from Hastings. If it hadn't been for Hastings there would probably be no Bermuda Onion industry in Texas now.

The Bermuda Onion is the safest vegetable crop that you can grow. It's adapted to the Southern third of Texas, the coast sections of Georgia, Alabama, Mississippi, Louisiana, all of Florida, and the valley lands of Southern California. The Bermuda Onion grower has a sure and steady market for his product, North, South, East and West, and it seldom nets him less than 1 1/2 cents per pound, and often 3 and 4 cents. Its importance as a money crop can hardly be over-estimated. Let the consumer once get a taste of genuine Bermuda Onion and he will buy no other so long as a Bermuda is on the market. No gardener should fail to grow them either for market or home use.

We Have Sold 80 Per Cent of the Seed

There is no other seed house in this or any other country that has sold 80 per cent or even 50 per cent of the seed used in any one great crop for a series of years. We have sold 80 per cent of the Bermuda Onion seed used in the United States up to and including 1928. We are not saying this as a matter of boasting, but simply stating a fact. It is an unequaled record and there must naturally be a reason for it, especially so when our prices for seed are as high or higher than those of other firms. Why is it, then, that we sell such a large proportion of the seed used in a commercial crop worth millions of dollars? It's all a question of seed quality. Hastings' Bermuda Onion Seed is the only seed that has been of even grade—seed that has gone on and "made good" year after year in the actual crop tests. Almost every seed house that sells seed in the South has tried on Bermuda Onion seed. None of them have ever been able to get a quality equal to Hastings, and most of them have given up attempting to sell in the commercial onion-growing districts where high quality is insisted on by the growers. These men, with their years of experience in onion growing, have learned the impossibility of growing the big paying crops with inferior seed, not true to name, seed that makes thick necks and scallions instead of fancy onions. The late T. C. Nye, of Laredo, Texas, who used our seed exclusively, reported one crop of 400,000 pounds (8,000 crates) without any culls. This is a combination of first-class cultivation and first-class seed.

Every pound of seed we sell is the best that can be grown with carefully selected and bred stock running back for more than a dozen years; then the seed is thoroughly reseeded of all light and imperfect seed. It is equalled by no seed yet produced or offered by any other person or firm.
You Must Have the Genuine Seed to Succeed

No crop, with the possible exception of cabbage, depends more on the genuineness and quality of the seed for a successful crop. Outside of the Hastings' importation there is little Bermuda Onion Seed that is put out for the man who wants to make a success of his crop. There is not a seed house in the country except ourselves whose Bermuda Onion seed has made good with the growers right on year after year. It's the only dependable Bermuda Onion seed sold in the United States. Others occasionally get hold of a small lot of good seed, then fall down on quality the next year. This experience has been repeated over and over again.

We could fill this entire catalogue with letters from onion growers who have depended on seed from other sources than Hastings' to their sorrow. Hastings' Bermuda Onion seed (Crystal Wax, Bermuda White, and Bermuda Red) always "makes good" everywhere and every year, in good growing seasons and bad. It has stood the test of 25 years continuous planting without a "fall down." There have been all sorts of cut-price propositions put up to the growers in years past. There are beginners in onion-growing every year and older ones wanting to take chances for the sake of saving a few cents per pound in seed cost.

Veteran onion growers like T. C. Nye, of Laredo, Texas, are not caught by offers of a cut price. When they start a crop they want to feel sure that the seed is right, and when Bermuda Onion Seed comes from Hastings' they know it's right. Mr. Nye made $7,000 clear net profit from his 20 acres one year, and it wasn't a specially good year for onions either. In Bermuda Onion Seed it's a whole lot better to be sure at planting time than sorry at harvest.

It's Much Better To Be Sure Than Sorry

Harvest time tells the tale and the onion grower who for the sake of saving a dollar or so per acre in planting is reasonably sure of losing a hundred or more in the crop.

The late Mr. T. C. Nye, of Laredo, Texas, pioneer of the Texas Bermuda Onion Industry, once said in a letter to us:

"I have always purchased my onion seed from Hastings except on two occasions, when I wished to place additional orders with them, and found that they had already accepted orders for as much seed as their contracts would yield, and so I was compelled to buy part of my seed from other parties. I can say that I never got from any other source the same pure seed that I got from Hastings."

"I have bought Bermuda Onion seed from Hastings all the years that I have been in the Bermuda Onion business, and I will never buy from any other house as long as I can get them from him."

There Is No Other Seed "Just as Good as Hastings'"

Readers of this catalogue who have been in the Bermuda Onion business for years have representatives of other seed houses call on them. They are not telling the truth, and that's worse, they know that they are not telling the truth. Not a single other house has sold seed in the Bermuda Onion territory that has made good two years in succession. The truth of the statement can be borne out by every onion grower in the large onion growing districts. There has never been a crop of Bermuda Onions produced from seed from other houses that has equaled crops from Hastings' for purity, shape, and yield per acre. Every record crop of Bermuda Onions produced in this country has been from Hastings' seed. Practically every seed house in the United States that attempts to do Southern business has taken a shot at this Bermuda Onion business during the last 17 years and none of them have succeeded. Why? Simply because the seed has not "made good." They have not the right growing arrangements. The seed is not "bred up" properly. This mongrel, more or less "scrub" onion seed has occasioned losses of hundreds of thousands of dollars to growers in Texas, Florida, and other states. This seed makes ill-shaped, thick-necked, unsatisfactory onions, while much of the seed sold is not Bermuda Onion seed, but Italian and Spanish varieties that are worthless in the South. If there is one crop you can't afford to take chances on the seed, it's Bermuda Onions. If you plant Hastings' you are safe.
TIME FOR DELIVERY OF THE NEW 1919 CROP SEED

We positively will not fill any orders for Bermuda Onion Seed until after the arrival of the new 1919 crop seed. This will probably be the latter part of August. Seed should not be planted before September 15th, while after September 25th is better. Send in your order for onion seed as early as you wish. Same will be booked and the seed sent you just as soon as we can get it thoroughly re-cleaned after its arrival in Atlanta.

White or Yellow Bermuda The most widely and largely planted of the Onion (No. 288). Bermuda varieties. Before we introduced our Crystal Wax this was generally called white to distinguish it from the Bermuda Red, although it is a light yellow or straw color. Since the appearance of Crystal Wax on the markets the produce trade of the country began calling this variety "yellow" to distinguish it from the pure white Crystal Wax. This has led to some confusion as to the name and from now on we shall list it under the name of White or Yellow to avoid any misunderstanding. We make this explanation, for many who plant this variety from the first time expect it to be a pure white in color.

Our illustration on page 17 shows the Bermuda White or Yellow as grown in Florida from seed sown October last. Less than six months from seed sown to the fully matured onions. No onion grown compares with the Bermuda in mildness of flavor, and for this reason it is immensely popular with millions of people who dislike the strong flavor of most of the varieties. You will make no mistake in planting the Bermuda Onion. Large packet, 10 cents; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, 90 cents; pound, $3.00; postpaid.

Hastings' Crystal Wax The most attractive onion in the world. Our own introduction and one that we have been exceedingly proud of. It is an absolutely pure white Bermuda Onion with a most beautiful waxy appearance that makes it sell on sight in the retail markets. In New York and other large markets our Crystal sells at 35 to 50 cents per crate above the Bermuda White or Yellow. In Atlanta markets it has largely displaced all other onions during spring and early summer. Excep in color it is identical with the Yellow Bermuda, has all its desirable qualities combined with much more handsome appearance. Seed of this is always in short supply, as it is a very light seeder. Packet, 10 cents ½ ounce, 30 cents; ounce, 30 cents; ¼ pound, $1.25; pound, $4.00; postpaid.

Red Bermuda Onion (No. 287) Our genuine Bermuda Red is the favorite everywhere in the South for home use and Southern markets. Identical in size, shape and mildness with our White Bermuda. The color is a pale, waxy red, and it is just the right variety in all sections where a red but mild onion is preferred. Large packet, 10c; ½ oz., 15c; oz., 35c; ½ lb., 90c; pound, $5.00; postpaid.

From a Photograph Showing Hastings' Clean "Silver Skin" and "Yellow Danvers" Onion Sets

Bermuda Onion Sets for Earliest Crops

We do not advise the use of onion sets exclusively for the large commercial crops. There is a high priced demand for limited quantities of Bermuda Onions both for shipment and to supply the demand for local or nearby markets throughout the South and the planting of a small part of the onion acreage in sets is usually found profitable. As a rule onions grown from sets are not as well formed as those grown direct from seed, but this is not a serious drawback on the early markets.

For earlier shipments or to meet the local market demand for full grown onions early, the planting of sets has a distinct place in the fall garden operations. These Bermuda Sets grown from Hastings' genuine seed ripen fully grown onions four to six weeks ahead of crops grown direct from seed. If you want an early extra onion crop plant some of these Bermuda sets this fall. Sets ready for delivery about September 1st. possibly a little earlier.

We cannot make definite quantity prices at this time, but write us for prices as soon as you want to buy.

Bermuda White or Yellow The genuine White or Yellow Bermuda Onion of the great commercial crops. If planted early these sets do wonderfully as far north as Atlanta, withstanding the severest winters. In our coldest winter, 1917-18, Bermudas from sets on the Hastings' Farm had their tops killed down but came up again and made as fine looking onions as any from Texas or Florida. In the set form they often have a rather reddish colored skin, but on maturity are a light straw color. Pound, $5.00; postpaid, 40 cents.

Not prepaid: 8 lbs. (200), $1.25; 22 lbs. (bushel), $4.00.

White Multipliers Finest sets for earliest crop. Pure white color, very productive, one set frequently making 20 bulbs in one season. Right size for bunching or pickling. Their greatest value is for an early onion for bunching green, coming in three to four weeks ahead of any other onion. Pound, 40 cents; postpaid. Write for special prices on amount you want when ready to buy.

Silver Skin Sets Sets of White Portugal or Silver Skin onion. Large white onion. Pound, 40c; postpaid. Not prepaid: 8 lbs. (200), $1.25; 22 lbs. (bushel), $4.00.

Yellow Danvers Sets Forms globe-shaped yellow onions. Pound, postpaid, 40 cents. Not prepaid: 8 lbs. (200), $1.00; 22 lbs. (bushel), $3.75.

Garlic Pure Italian Garlic. Pound, 75 cents; 2 pounds for $1.25; postpaid.
OTHER GOOD VARIETIES
OF ONIONS FOR THE SOUTH

In the previous pages we give a great deal of space to the Bermuda varieties. They are the most important for fall planting for Florida and all along the Gulf Coast. The Bermudas are the earliest to mature, and hold a distinct place, both as a commercial crop as well as for home gardens and nearby markets. There is a place, however, that they do not fill. They are early and the quantity of them grown is so small compared with the large and steady demand for onions that the Bermudas seldom take care of the market over two months in the year. This leaves a nine or ten months' demand to be supplied with other varieties, for the Bermudas, carelessly handled, do not keep well over three months.

Hastings' Snow White Globe Onion (No. 292) has the shape of these onions. Handsome snow-white bulb, with a waxy appearance. It is large, firm, with a mild, and a first-class keeper. Remarkably even and uniform in growth, will always prove a favorite wherever it once appears on market. Large packet, 10 cents; ½ ounce, 15 cents; ounce, 55 cents; ¼ pound, $1.00; pound, $3.50; postpaid.

Hastings' Dark Red Globe Onion (No. 291) is the skin that is found in no other onions. Large packet, 10 cents; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, $1.00; pound, $3.50; postpaid.

Hastings' Yellow Globe Onion (No. 293) is a distinguishing feature. All our Globe Onions are extra large in size, and large croppers as well as first-class keepers from the firmness and solid of the flesh. Color a very light shade of straw yellow, almost the same color as the Bermuda White. Large packet, 10 cents; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, $1.00; pound, $3.50; postpaid.

Hastings' Prizetaker Onion (No. 296) is the very best American growth, far superior to all imported seed and 'way ahead of the seeds. It has been most successfully grown in all parts of the Central South from both spring and fall sowings. It is very large, long, measuring about 12 to 15 inches in circumference, and fine bulbs have been raised weighing from 4½ to 5 pounds each. During the last five years we have seen some splendid market crops of Prizetakers raised even under unfavorable conditions, not only in Georgia, but in practically every one of the Southern States, showing Prizetaker to be well adapted to our entire section. Our Mr. Hastings has been in all of the noted onion-growing sections of this country—Connecticut, Pennsylvania, Ohio and California—and he has never seen any Prizetaker onion superior to the samples which were shipped us from those crops. Prizetaker is a light straw-colored onion with a pure white flesh, very fine grain with rather mild flavor, and will keep for any reasonable length of time. Packet, 10 cents; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, 75 cents; pound, $2.50; postpaid.

Louisiana Creole Onion A flat, light-red variety, grown extensively in Louisiana, Mississippi (No. 298) and other parts of the South. Very fine and solid; a splendid keeper. Good heavy cropper, but strong flavored. We do not recommend it to those who want a mild onion. From six weeks to two months later in maturity than the Bermuda. Delivery of new crop seed (Louisiana grown) about September 1st. Packet, 10 cents; ounce, 50 cents; ¼ pound, $1.50; pound, $5.00; postpaid.

Extra Early Barletta Small, pure white, growing small round bulbs about one inch in diameter. Just the right size for pickling. Packet, 10 cents; ½ ounce, 25 cents; ounce, 60 cents; ¼ pound, $2.00; postpaid.

Giant White Tripoli (No. 289) El Paso or Large Mexican. Especially large; pure white mild onion. Packet, 10 cents; ½ ounce, 20 cents; ounce, 35 cents; ¼ pound, $1.00; postpaid.

Silver Skin Onion (No. 300) White Portuguese. A favorite variety from their ability to grow sets. Small bulbs are near uniform. Also a splendid pickling onion with silvery white skin and mild flavor. Packet, 10 cents; ½ oz., 25 cents; oz., 40 cents; ¼ pound, $1.15; pound, $3.75; postpaid.

Large Red Wethersfield (No. 285) One of the largest varieties listed by American seedsmen, and has retained its popularity wonderfully well through the years. It is easily grown to full maturity from the black seed and is a fairy good keeper into winter. Almost round, of large size and deep red color. In flavor decidedly pungent. Packet, 5 cents; ½ oz., 15 cents; oz., 25 cents; ¼ pound, 75 cents; pound, $2.50.

Yellow Globe Danvers Very productive and a good standard variety for both home use and market. Packet, 5 cents; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, $1.00; postpaid.

Australian Brown (No. 297) A Long Keeper Many folks have to many other varieties of onions, but these are the best known and have proved to keep in perfect condition except for a slight shrinkage and lose of weight for a solid year from the time it was pulled from the ground. For a late maturing, long keeping onion to last for a long time, stored in a dry place, Australian Brown has no equal. Packet, 5 cents; ounce, 20 cents; ¼ pound, 65 cents; pound, $2.00.
**MUSTARD FOR WINTER SALAD**

**Culture** Sow in any good garden soil thickly in drills 14 to 16 inches apart. Give clean culture, keeping free from grass and weeds. Leaves are large enough to use as a salad in from four to six weeks from sowing, and can be cut all through the winter. Sow August to November. Use one ounce of seed to 200 feet of row.

**Giant Southern Curled Mustard** (No. 278) No fall garden is complete without a little patch of mustard for fine salads. Our Giant Southern Curled is the very best of the finely curled leaf strains, really beautiful enough to grace a flower garden. It is slightly pungent, crisp and tender and can be eaten like lettuce or boiled for "greens." The Hastings' strain of Southern Curled is the same as offered by one or more California Northern houses as "Ostrich Plume." If you like mustard for either spring or fall planting you will be pleased with this variety. Packet, 5 cents; ounce, 15 cents; ½ pound, 35 cents; pound, $1.25; prepaid.

**Chinese Mustard** (No. 277) A very tender mustard, ideal for early spring or fall planting. It is used for garnishing the table, in sandwiches, and for pickling. This strain of our Mustard is the only one we offer. Packet, 5 cents; ounce, 15 cents; ½ pound, 35 cents; pound, $1.25; prepaid.

**PLANT GEORGIA GROWN OKRA**

Okra or gumbo is a most healthful vegetable and ought to be plentiful in every Southern garden. In our seed growing work here in Georgia we have developed two splendid strains of the White Velvet and Perkins' Mammoth, both being far superior to what is offered under these names by other houses, and we are sure that seed of either of these two varieties will please you. Plant one ounce of seed to 50 feet of row; about 5 pounds per acre.

**Hastings' White Velvet Okra** (No. 305) A standard variety throughout shipment, ready to use in 55 to 60 days. We have a specially fine, early, very round, smooth seeded strain of medium size, the pods being almost free from ridges and sharply prickly to the touch. This strain of the White Velvet we find to be the very best of all the White varieties. Packet, 5c; oz., 10c; ¼ lb., 25c; lb., 50c; prepaid. Ten lbs., not prepaid, $5.00.

**Perkins' Mammoth Long Podded Okra** (No. 306) This distinct new variety of green-podded okra is by far the best variety for market and shipping purposes, ready to use in 50 to 75 days and being used by many Southern truckers exclusively for this purpose. The original strain as originally introduced has been greatly improved by us, and its productivity is simply wonderful, the pods starting to shoot out within 3 or 4 inches from the bottom of the stalk and the whole plant is covered with them to the height of a man's head (5 to 6 feet). Pods of an intensely dark green color of unusual length, frequently 3 to 10 inches long. Pods are very smooth and do not harden up as is usually the case with other varieties. Packet, 5c; ounce, 10c; ¼ pound, 25c; pound, 50c; prepaid. Ten pounds, not prepaid, $5.00.

**PARSLEY**

An extremely beautiful plant used for garnishing. Can be sown in either fall or spring in drills 15 inches apart. When plants have become strong thin out to 6 inches apart in the row. Parsley seed usually takes 3 to 4 weeks to germinate. Soak seed 12 hours in water before planting. Keep beds free from weeds and grass.

**Extra Moss Curled Parsley** (No. 308) Our fine strain of Extra Moss Curled is the most ornamental of all varieties. It is handsome enough to have a place in your garden, a favorite sort for garnishing and to supply hotels and markets. It is planted almost exclusively by Atlanta market gardeners for that purpose. Packet, 10 cents; ounce, 15 cents; ¼ pound, 50 cents; pound, $1.50; prepaid.

**Double Curled Parsley** (No. 309) Plants of dwarf, compact growth, and the young leaves have the edges heavily crimped, giving a general appearance of coarse moss. Often used by market gardeners. Packet, 10c; oz., 25c.

**PARSNIPS**

**Culture** Sow seed thickly in rows about 16 inches apart any time from January to April for spring and summer crop in this latitude; in Florida and Gulf Coast section sow September to December for winter and spring crop. Plant one ounce of seed to 100 feet of row; five pounds per acre.

**Improved Hollow Crown** (No. 311) An entirely distinct, yet thoroughly good variety of parsnip that we have sold thousands of pounds of during recent years. About the same quality for salads or holing and remains in condition for use a long time. The quick almost rank growth of the Chinese, insures tenderness, mildness and freedom from bitter flavor. The engraving above from a photograph shows the general appearance of the leaves. Packet, 5 cents; ounce, 15 cents; ½ pound, 35 cents; pound, $1.25; prepaid.

**PLANT A VARIETY**

Most every family with a garden plants turnips or mustard for "greens" and perhaps a few other kinds of vegetables in the late summer. However, they are mighty few. The Fall Garden should be nearly as important as the spring garden and a full fall garden will pay just as well. In the spring most every farm has some sort of garden but in June and July those gardens start to die and by fall the garden is almost forgotten. Vegetables are scarcer and higher priced in the fall and that is just the time you should have a big variety of vegetables in your home garden for use fresh as well as for drying and canning.
Hastings’ Peppers

In fall, planting one ounce of seed will usually produce about 1000 good strong plants. Most gardeners plant one-half pound per acre to be sure of sufficient plants. Florida and Southwest Texas growers should plant Hastings’ Royal King and Ruby Giant this fall.

Pimiento (No. 358) wonderful what popularity Pimiento has attained in the short time it has been known. It is absolutely free from the pungency of flavor distasteful to so many. Can be eaten raw like an apple, can be stuffed with meat and baked; can be used as a salad or canned for winter use. Has very thick, firm flesh which permits of its being scaled and peeled. The shape and regularity of size of this splendid variety is wonderful. Packet, 10 cents; ½ ounce, 20 cents; ounce, 35 cents; ¼ pound, $1.00; pound, $3.50; postpaid.

Ruby Giant (No. 359) mild pepper, here it is. Hastings’ Ruby Giant is a cross between Ruby King and Chinese Giant, having the good qualities of both yet without the undesirable qualities of either. It is very attractive, grows to large size, is exceptionally mild, and when ripe it is of a bright scarlet color. Flesh exceedingly thick, sweet, and so mild that it can be eaten raw. Ruby Giant is early in maturing, the plant is vigorous and upright, taller than the Chinese Giant, much more productive and an excellent large sweet pepper for stuffing. It makes a satisfying table pepper, an ideal home garden sort, and is a quick basket filler for the market gardener that will sell on sight. You will make no mistake by planting Ruby Giant. Packet, 10 cents; ½ ounce, 20 cents; ounce, 35 cents; ¼ pound, $1.25; pound, $4.00; postpaid.

Large Bell or Bull Nose (No. 356) The standard large variety both for home use, market and shipping to Northern markets from Florida, Louisiana and Texas. Rather mild flavor, is comparatively early and a heavy producer of fruits 3 to 3½ inches long and 2 to 3 inches across the shoulder. Packet 5 cents; ½ ounce, 20 cents; ounce, 35 cents; ¼ pound, $1.00; pound, $3.50; postpaid.

Ruby Giant Pepper—A Real Giant Sweet Pepper

Ruby King (No. 352) A leading variety of sweet pepper for home use and market in the South. A very vigorous grower, with large, sweet, mild fruits. A close favorite with the Large Bell or Bull Nose, slightly larger in size and certainly much sweeter and milder than that variety. Packet, 10 cents; ½ ounce, 20 cents; ounce, 35 cents; ¼ pound, $1.25; pound, $4.00; postpaid.

Hastings’ Royal King (No. 357) Introduced by us in 1917. While it is a superb sweet pepper for home and market use we want to especially call the attention of the trucker or shipping market gardeners to its regularity of size and shape, making it an exceptionally desirable variety for good packing and fine appearance on arrival in the markets. This will insure its being a top price seller at all times.

This new sweet pepper is a wonderful introduction and will in time, we believe, take the place of the popular Ruby King. It is a very prolific, bright and glossy, of large size (the illustration to the right shows the natural size and type of this new variety); the flesh is mild and thick and the lobes well filled out. It runs remarkably true to type and uniformity of size for a pepper, and the plants are of strong, stocky, erect growth. It is a native Southern pepper, originating right here in Georgia, and has made good from the start. When we say it is better than our Ruby King we are saying a great deal, but we want you to plant a quantity of this new variety this year. Taste it raw, stuff it with meat and bake it and fill it with salads for the table; we believe you will like it and agree with us that it is the bell type pepper you have been looking for. Packet, 10 cents; ½ ounce, 20 cents; ounce, 35 cents; ¼ pound, $1.25; pound, $4.00; postpaid.

Hastings’ Golden Prize Large, bright golden-yellow variety; very sweet and mild. In some places this is eaten like an apple in the raw stage, for it is said to cure chills and fever. Packet, 10 cents.

Red Chili Pepper (No. 345) Two standard, well known hot varieties

Long Cayenne (No. 349) of pepper. Very pungent. Red Chili very small, Cayenne larger and longer. Both of these hot peppers are very popular throughout the South and a small quantity should be in every garden. Each, packet, 10c; 3 packets, 25c; postpaid.
Garden or English Peas for Fall Planting in the South

Prices include Postage Prepaid on Packets, 1-2, 1 and 2 lb. packages. Larger quantities by Express or Freight at Purchaser's Expense.

Many of our customers don't plant Garden Peas because they don't bear long enough. Plant seed deeper and work soil up around stalks, and peas will stay in bearing twice as long.

Culture

For fall planting in Central South garden peas should be sown early in September, especially the second early varieties. Extra early sorts, such as John L., can be sown in the latter part of the month and mature before frost. In Florida and along the Gulf Coast they may be sown during any of the fall months, October and November being preferable. Sow in drills, covering seed 2 to 3 inches deep, according to soil. To avoid the necessity of sticking or brushing, plant peas in double rows 6 to 8 inches apart, and when the vines get large enough run them together. Most varieties of the early and second early are of sufficiently stiff growth to support each other in this manner. Plant 2 pounds of peas to 100 feet of row. 50 pounds of wrinkled or 90 pounds of smooth peas make a bushel.

Hastings John L. (No. 316) Earliest of all the extra early varieties either for home use or market shipment. For 23 years it has held the record for earliness against all of the best strains of early peas sold by other American seedsmen and during that time no pea has been introduced that equals it for earliness and productiveness in the extra early class. John L. is a standard with Southern gardeners, both for shipping and home markets, and every year we sell hundreds and hundreds of bushels of this variety to Florida shippers. The earliest time on record in early maturity was made with this variety years ago by C. J. Montgomery, St. Augustine, Florida. He planted 25 pounds of John L., and on the 30th day from planting gathered one bushel of well developed pods therefrom. Packet, 10c; ½ lb., 30c; 1 lb., 70c; 2 pounds, 70c; postpaid. Not prepaid. In 10-pound lots or over, 10 cents per pound.

Alaska Extra Early Next to John L., this is the best of all the round, extra early peas; it follows John L. in earliness, is the best in quality and the heaviest bearer of all the round, extra earlies. Seeds are of bluish shade, well rounded out and the fresh peas are almost equal to the wrinkled sorts in quality. A splendid shipper and one of the very best for house use. There are a great many peas being sold under the name of "Alaska" that are from run-out stock or else not kept true to name; these dwarf varieties of garden peas have to be "rogued" very carefully every year to keep them true to type. This we do and when you buy Alaska from us you know exactly what you are getting. Packet, 10c; ½ lb., 30c; 1 lb., 70c; 2 pounds, 70c; postpaid. Not prepaid: 10-lb. lots, 17c per lb.

Hastings’ Extra Early Surprise Peas (No. 315) This extra early wrinkled pea beats them all for combining earliness, quality produced and most delicious quality in one variety. A true, wrinkled pea that ranks with the earliest; vines grow 20 to 24 inches high; require no brushing or staking if planted in double rows, as described in cultural directions. Its extreme earliness, delicious flavor, sweetness and tenderness combined with extra heavy bearing for an extra early sort make it a favorite. See the illustration on this page showing exact size of the pods crowded full of peas. Packet, 10 cents; ½ pound, 25 cents; pound, 45 cents; 2 pounds, 75 cents; postpaid. Not prepaid. Ten pounds, or over, 22 cents per pound.

Gradus or Prosperity Pea (No. 330) An extra early wrinkled pea with immense pods almost as large as Telephone and Mammoth Poddled. This pea combines earliness, productiveness and finest quality. Very hardy, strong and vigorous grower, very prolific, the peas extra large. Flavor is most delicious and peas remain tender and sweet for a long time. Packet, 10c; ½ pound, 30c; pound, 70c; 2 pounds, 70c; postpaid. Not prepaid: Ten lbs. or over at 20c per lb.

Hastings’ John L. Extra Early Peas

Hastings’ Extra Early Surprise Pea
Hastings’ Garden Peas

Thomas Laxton (No. 323) Closely resembles the Gradus or Prosperity but hardier and slightly earlier. Pods are about 3½ inches long, straight, well filled, rounded with rather a blunt end. The large wrinkled peas are of a greenish cream color and the plants are very vigorous growing. This is a very popular variety among the Florida and Gulf Coast growers and we have especially fine seed stock. The flavor is very pleasing and the peas retain their tenderness. Packet, 10 cents; ½ pound, 30 cents; pound, 40 cents; 2 pounds, 70 cents; postpaid. Not prepaid: 10-pound lots or over, 20 cents a pound.

Florida McNeil (No. 333) Recommended for Florida and Gulf Coast regions only, where it is well known. A medium early, very heavy bearing small seeded variety that has proven itself an intensely prolific bearer in Florida and Lower Gulf Coast sections. For home use and nearby markets only. Its greatest value is in hardiness and heavy bearing qualities. Packet, 10 cents; ½ pound, 20 cents; pound, 40 cents; 2 pounds, 70 cents; postpaid. Not prepaid: Ten pounds or over at 20 cents a pound.

Nott’s Excelsior (No. 319) An extra early, dwarf-growing wrinkled variety, very similar to American Wonder, but one-third larger; of the same earliness and delicious flavor. Pods are more closely packed with peas than any other variety. This variety is superseding American Wonder, which was class for so many years. Packet, 10 cents; ½ lb., 20 cents; lb., 40 cents; 2 lbs., 70 cents; postpaid. Not prepaid: 10-pound lots or over, 20 1/4 cents a pound.

Market Surprise (No. 322) New large seeded extra early. Offered for the first time by us last fall. Vigorous growth with stocky vines, growing 2½ feet high. Very prolific for an extra early pea, the pods containing 8 to 12 fine peas of rich green color. You will like Market Surprise for it’s equally good for home gardens or for market. Packet, 10 cents; ½ pound, 20 cents; pound, 40 cents; 2 pounds, 75 cents; postpaid. Not prepaid: 10-pounds or over at 22 cents a pound.

Premium Gem (No. 331) A dwarf wrinkled, extra early variety, growing about 15 inches high and is one of the earliest of the good quality varieties for home gardens. This is one of the oldest varieties that has always been a great favorite. Packet, 10 cents; ½ pound, 20 cents; pound, 40 cents; 2 pounds, 70 cents; postpaid. Not prepaid: Ten pounds or over, 30 cents a pound.

Second Early--Heavy Bears

Bliss Everbearing (No. 329) The greatest favorite among our customers for home gardens and nearby markets. Height of vine 18 inches to 2 feet. Pods 3 to 4 inches long, each pod containing 6 to 8 wrinkled peas of very fine quality. Size of peas large to very large, frequently ½ inch in diameter. Its habit of growth is of peculiar branching character, forming as many as ten stalks to a single root. The individual or separate branches are of extraordinary strength and substance so that when hilled up properly they will stand up well without “brushing.” This variety is especially noted for its continuance of bearing, a characteristic which gives it special value. Even after repeated picking the vines continue to develop blooms and fruit, which mature into fine peas. The stock is of the very best; a variety that you should have in your garden this fall. Packet, 10c; ½ lb., 20c; lb., 40c; 2 lbs., 70c; postpaid. Not prepaid: 1 pound or over at 30 cents a pound.

Hastings’ Home Delight Pea

A favorite among all who have ever grown peas—fine quality. Packet, 10c; ½ lb., 20c; lb., 40c; 2 lbs., 70c; postpaid. Not prepaid: 1 ounce or over at 30 cents a pound.

Hastings’ Home Delight Pea—A Fine Second Early

Little Marvel (No. 314) An excellent dwarf sort for the market and home garden. The pods average a little longer than those of Premium Gem, are more attractive in shape and color and the peas are of superior quality. The vines are heavily set with large, straight deep green pods which are square ended at the bottom and are well filled with large tender peas. Seed large, green, wrinkled, and very prolific. This is a recent introduction which trials show us to be of exceptional merit. Packet, 10 cents; ½ pound, 20c; pound, 40c; 2 pounds, 70c; postpaid. Not prepaid: Ten pounds or over at 20 cents a pound.

Black-Eyed Marrowfat (No. 320) Old, well known very strong growing varieties that are favorites. When properly “brushed” they are exceedingly heavy bearers and very profitable. Each: Packet, 10 cents; ½ pound, 20c; pound, 40c; 2 pounds, 70c; postpaid. Not prepaid: Ten pounds or over at 20 cents a pound.

Large White Marrowfat (No. 321) A favorite variety with edible pods, cooked and eaten in the same manner as snap beans. These are great favorites with those who have once used them. Packet, 10 cents; postpaid.

Tall Sugar or Salad Pea (No. 325) A distinct variety with edible pods, cooked and eaten in the same manner as snap beans. Packet, 10 cents.

Dwarf Sugar Pea (No. 326) Identical with Tall Sugar Peas, except that it grows in short hushy form. Packet, 10 cents.

Plant Many Different Vegetables

It keeps down your store bills and gives a variety on your table. Beets, Beans, Cabbage, Lettuce, Radishes, Squash, Onions, Spinach, Kale, etc., add variety to your table, health to yourself and family. Don’t forget to plant a good fall garden and keep it going until killing frost.
HASTINGS' RADISH SEED

Culture   For best results radishes require a rich, loose, moist soil, so they can be grown quickly. The crisp, tender flesh of early radishes develops almost entirely on rapid growth. Successive plantings should be made every 10 days or two weeks to keep up a continuous supply of crisp and tender radishes. For early use plant the round or button radishes and olive shaped. For later use plant the long and half-long varieties, as they root much deeper and better resist heat and drought. What are known as winter radishes should be sown in August and September. All radishes should be sown thinly in drills one foot apart, seed covered ½ inch and kept clear of grass and weeds. Somewhat older, 100 feet of row; 10 to 12 pounds per acre. Our radish seed is of the very best, grown from carefully selected and transplanted roots. Radishes are very easy to grow.

Hastings' Early Long Scarlet (No. 376)   This is the most popular of all radishes in the South for general garden use and market. Our illustration shows the remarkable regularity and size of our strain of this variety. It is a favorite everywhere, no vegetable garden being complete without it. Tops rather small, roots long and tapering to a decided point; color an intense bright scarlet. Flesh is very crisp and tender and when grown rapidly, as all radishes should be, it is free from all pungent taste. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; pound, $1.00; postpaid.

Long White Vienna or Lady Finger (No. 388)   An early maturing and attractive, long white, summer radish of most excellent quality. The tops are of medium size. The roots are clear white, slender, smooth and average when mature six to seven inches long by about five-eighths to seven-eighths of an inch in diameter at thickest part. The flesh is very crisp and tender. This variety is desirable for market and home garden use. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; pound, $1.00.

Long White Icicle Radish   Excellent and profitable; a new and distinctive sort; ready for use as soon as Hastings' Early Long Scarlet, but has fewer leaves. Admirable alike for open air and under glass. The icicle is perfectly white in color, very long, slender and tapering shape. It quickly grows to market size, crisp and brittle, and of mild, sweet flavor. A fine variety for both market and home gardeners who want an early, long white radish. Packet, 10c; ounce, 15c; ¼ pound, 50 cents; pound, $1.50; postpaid.

Chartier (No. 373)   Grows to a large size, but not very uniform in shape. Red at the top, pink in the middle, white at the tips; handsome appearance when pulled at the right time. It is especially fine flavored when grown quickly in the South. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; pound, $1.00; postpaid.

French Breakfast (No. 389)   A very tender and mild radish, favorite for an early half-long variety in the South both for home and market use. Color bright red with white bottoms. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; pound, $1.00; postpaid.

Hastings' Glass Radish   After we introduced this radish several years ago (No. 383) it was named the "Cincinnati Market Radish" by a Northern seed house and is generally catalogued by Northern houses under that name. We consider it one of the finest of the long red or pink radishes. It is of bright pink color with white tips; very regular and uniform in size and shape. Flesh transparent, always crisp and brittle, with mild flavor even when grown to large size. Desirable for both market or home use. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; pound, $1.00; postpaid.

White Strasburg   Oblong, tapering to a small root; skin and flesh pure white; firm, brittle, and tender, retaining its crispness even when the roots are old and large. Best variety for summer use and an excellent all-round variety. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; lb., $1.00.

DEPEND ON HASTINGS' SEEDS

Hastings' Seeds are grown for planting throughout the South. You can depend on their making good all the time and you know that you get true value for every dollar or nickel spent.

Thirty years ago a few gardeners planted Hastings' Seeds for the first time and, because they continued to make good, Hastings has grown steadily. Now it has by far the largest seed order filling capacity in the United States or in the world.
Rosy Gem Radish (No. 375)
Also called “White Tipped Scarlet Ball.” A favorite among market gardeners for forcing as well as for open ground growth. We have seen it ready for market here in Atlanta in 18 days from time seed was sown. A most desirable variety for home gardens, and almost identical with the Scarlet Button except in white shading at the base of root. One of the earliest varieties; globed shaped with rich, deep scarlet top, shading to pure white at the bottom. Very tender, crisp, never becoming pithy until very old. Packet, 5 cents; ounce, 10 cents; 1/4 pound, 35 cents; pound, $1.25; postpaid.

Scarlet Button Radish (No. 381)
A favorite, extra early radish, round form and deep scarlet skin; mild flavor, crisp and very tender; short, narrow leaves, making a very small top. Packet, 5 cents; ounce, 10 cents; 1/4 pound, 35 cents; pound, $1.25; postpaid.

Crimson Giant (No. 378)
A large sized extra early turnip radish, a little longer in shape than the Scarlet Button, but brighter color; twice the size. It grows quickly and even when it attains large size remains tender and of fine flavor to the last. Will prove a money-maker for the market gardener, as its bright crimson color makes it a seller on first sight. Equally valuable for home garden use. Packet, 5 cents; ounce, 10 cents; 1/4 pound, 35 cents; pound, $1.25; postpaid.

Half Long Deep Scarlet (No. 384)
As shown by our illustration it is about half way between Scarlet Button and Long Scarlet in shape. Of most beautiful appearance and in market brings high prices. In color skin is a brilliant scarlet throughout; flesh a clear white; crisp, tender and free from pungency or hotness, so common in many radishes. An extra early variety, and is thoroughly satisfactory to Atlanta gardeners who plant it. Packet, 5 cents; ounce, 10 cents; 1/4 pound, 35 cents; pound, $1.25; postpaid.

Our Rory Gem Radish

Earliest Carmine, Olive Shaped (No. 374)
Very handsome and considered by many as the best of the extra early olive shaped radishes. Olive shaped, smooth skin, dark carmine color. In 20 to 22 days the crisp, tender little radishes are ready for use. Top small and of rather upright growth. This is a fine radish. Packet, 3 cents; ounce, 10 cents; 1/4 pound, 35 cents; pound, $1.25; postpaid.

Philadelphia White Box (No. 391)
Almost identical with Scarlet Button except in color; which is pure white. Most popular white “button” radish grown. Extra early, very crisp and tender. Packet, 5 cents; ounce, 10 cents; 1/4 pound, 35 cents; pound, $1.25; postpaid.

Hastings’ Winter Radishes

Black Spanish Winter (No. 386)
Similar to the White Spanish except the skin is black. Large and a good keeper; solid, crisp and tender roots make it a fine variety of winter radish that will keep well into the spring. Packet, 5 cents; ounce, 10 cents; 1/4 lb., 35 cents; pound, $1.25; postpaid.

California Mammoth White (No. 390)
Extensively grown by the Chinese gardeners in California. Grows 10 to 12 inches long and from 2 to 3 inches in diameter. Pure white skin and flesh; solid, crisp and of good flavor. Packet, 5 cents; ounce, 10 cents; 1/4 pound, 35 cents; pound, $1.25; postpaid.

China Rose Winter (No. 377)
A very distinct and handsome variety of winter radish, probably the most largely grown. Color of skin a deep clear scarlet; flesh pure white, solid and of fine flavor. A good keeper well into the spring. Packet, 5 cents; ounce, 10 cents; 1/4 pound, 35 cents; pound, $1.25; postpaid.

Hastings Mixed Radishes (No. 387)
Many don’t want to make more than one radish planting to last all season, and our mixed radishes fill the bill exactly for this purpose. Hastings’ Mixed Radishes contain some of each variety catalogued by us, except the winter varieties. It contains early, medium and late varieties, the round, the half long and long. For home garden use we sell tens of thousands of packages of this justly celebrated mixture every year. It is deservedly popular, giving us as it does a succession of crisp, tender radishes throughout the season from one sowing. Packet, 5 cents; ounce, 10 cents; 1/4 pound, 35 cents; pound, $1.25; postpaid.
BUG INSURANCE

Much as we may dislike to acknowledge it, bugs are something that we have to acknowledge must be taken into consideration in most of the larger gardening operations anywhere in the country. Bug depredations exist alike North, South, East and West.

You have all heard of and probably carry some sort of Insurance, fire, life, accident or some one or more of the dozens of kinds of insurance that are offered and needed. We want to talk to you about another kind of Insurance. Not a man or woman who farms or gardens who has not been bothered with bugs of various kinds in recent years. You have, or we miss our guess. If not, you have certainly been fortunate. Why not "Bug Insurance"? Not necessarily a guarantee against bug attacks but a guarantee against any serious results of those bug attacks. Every market gardener, every trucker who grows vegetables has Paris Green. It is very much a varity of bugs, and the same thing is true of many home gardens. Why not insure your crops against serious bug damage?

Why not "Bug Death"? Our only really safe insecticide? We have known Bug Death for many years. We have used it ourselves; have seen it used successfully by truck and market gardeners, large and small. We know just how good and safe Bug Death is and recommend it to you because of our long personal knowledge of its good and effective "bug killing" qualities.

Bug Death kills the bugs and at the same time does not injure the plant or its regular growth as does Paris Green, London Purpul, Arsenate of Lead or the dozen or more forms of arsenical poisons that are offered as "bug killers." Instead of Bug Death killing or injuring the plants (when applied right) it actually acts as a termitizer in small degree. Do you know of any other insecticide that this is true of? Bug Death is the only general insecticide known that is effective on bugs and is at the same time harmless to both the enemies and the friendly bugs. It's sure death to leaf-eating bugs and it does not "burr" the plants like Paris Green and other arsenical poisons, such as are generally used.

"Bug Death" is perfectly safe to use and the only bug poison that is perfectly safe. Perfectly harmless to human beings and animals, at the same time it is sure death to leaf-eating bugs of almost every kind. "Bug Death" is the best general Insecticide we know. Keep "Bug Death" on hand and when Mr. and Mrs. Bug settle on your premises to raise a family you can easily turn this into a "bug funeral" instead of leaving the way open for a large and able bodied increase in bug population in your garden. Order it now.

---

PREPAID PRICES on Bug Death by PARCEL POST

(These Prices Named in Columns Below Include Price of BUG DEATH and Postage)

1st and 2nd 3rd 4th 5th 6th 7th 8th
1 pound package $ .26 $ .26 $ .31 $ .34 $ .37 $ .41 $ .44
3 pound package —— $ .53 $ .57 $ .64 $ .71 $ .78 $ .86 $ .93
5 pound package —— $ .76 $ .87 $ .98 $ 1.09 $ 1.21 $ 1.32

We will order one dozen small size packages by mail, and if you find it satisfactory for your purposes, that you then order it in sufficient quantity to come by freight, and thereby secure a low transportation charge. You would then have it on hand for use at any time.

---

OTHER INSECTICIDES, FUNGICIDES AND SUPPLIES

Dry Bordeaux and Paris Green Compound (Sterlingworth). A combined insecticide and fungicide. Many of our customers want an insecticide more poisonous than Bug Death and, in that, more active. They also would like a preparation for controlling fungous growth and to be able to spray for both at the same time. This mixture or compound stops blights, rots, mildews, anthracnose, and other fungous growth and also kills such insects as Apple Maggot, Bud Moth, Canker Worms, Coddling Moth, Plum Curculio, Slugs, Cabbage Worms, Striped Cucumber Beetle, Squash Bugs, Rose Bug, Potato Bug or Beetle, etc. It can be dusted on dry or mixed with water and sprayed. This is a quick acting compound and will give you absolutely satisfactory results. Directions on boxes. One pound box, 60 cents; 5 pound box, $2.00; postpaid.

Whale Oil Soap (Sterlingworth). Genuine Whale Oil (no Flax Oil Soap). An old-time remedy for scale insects and plant lice and a very efficient insecticide. It is customary to dissolve one pound in four or five gallons of water to use as a spray. Directions will be found on the box. Follow these, as very tender plants will be injured by a stronger solution. One pound box, 35 cents; postpaid.

Tobacco Dust (Sterlingworth). Powdered tobacco is a standard insecticide, often used in conjunction with Whale Oil Soap and Bordeaux mixtures. The striped cucumber (squash and melon) beetle and flea-beetle may be repelled with this insecticide. One pound box with directions, 25 cents; postpaid.

Whale Oil Soap with Tobacco (Sterlingworth). Genuine Whale Oil Soap mixed with Tobacco Powder. This mixture combines the strength of Whale Oil Soap and the pungency of Tobacco Dust. Excellent for insects like Flea-Bug and four hours' work. It gives absolutely even distribution and so will make three bushels do the work of four. It has a special slope feed box, a very important feature. Use the same application as in the Cyclone, which when used properly fills without tipping the machine, ensuring a uniform flow and affords a great convenience to the operator in carrying the seeder. It also has an automatic feed mechanism which keeps the hopper properly filled without tilting the machine, and the seed delivered to the drill is exactly the same. Price is $1.75; postpaid.

Dickey Duster For those who only want a small distributor for dry or powdered insecticides and fungicides we have Dickey Dusters. They are fine for those with only small gardens or a few plants to dust. Price is $1.00; postpaid.

Cyclone Seed Sower The brand that scatters evenly, thoroughly and uniformly. Use it with any seeds that can be sown broadcast—or with ground seed mixtures. We have tested the Cyclone for its work on three or four hours' work. It gives absolutely even distribution and so will make three bushels do the work of four. It has a special slope feed box, a very important feature. Use the same application as in the Cyclone, which when used properly fills without tipping the machine, ensuring a uniform flow and affords a great convenience to the operator in carrying the seeder. It also has an automatic feed mechanism which keeps the hopper properly filled without tilting the machine, and the seed delivered to the drill is exactly the same. Price is $1.75; postpaid.
SPINACH FOR "GREENS"

Culture You can find no better vegetable to furnish an early supply of "greens" than Spinach. As "greens" its quality is unsurpassed, and were it more generally known in the Southern States almost every one would plant it. Our specially grown spinach is far superior to the spinach seed commonly sold. Its germination is stronger and better, the growth larger, more vigorous, and harder. Spinach requires rich soil, the richer the better, and can be sown during October, November and December, while the ground is not frozen. It germinates freely in cold weather and is a rapid grower. Sow one ounce to 100 feet of row.

Hastings' Aragon Spinach (No. 411) Very best variety for the South. Fine market size, having a large, thick, green leaf, well crumpled or savoyed, and stands a long time before running to seed. The hardest of all varieties, standing an ordinary cold winter without damage in this latitude. At the same time it is one of the best heat-resisting sorts for late spring use. This variety has been thoroughly tested and pleases all market gardeners who use it. Packet, 5c; ounce, 10c; $1/4 pound, 25c; pound, 75c; postpaid. Ten-pound lots or over, 50 cents per pound.

Bloomsdale (No. 412) A valuable variety which is extensively grown, producing large crops of thick-leaved spinach. Packet, 5c; oz., 10c; $1/4 lb., 25c; pound, 75c; postpaid.

Broad Leaved Flanders (No. 414) A heavy cropper that doesn't run to seed readily. Pkt., 5c; oz., 10c; $1/4 lb., 25c; lb., 75c; postpaid.

Long Standing (No. 413) A good variety to sow for all season. Sow for all season. Packet, 5c; ounce, 10c; $1/4 pound, 25c; pound, 75c; postpaid.

New Zealand Spinach (No. 416) An all summer variety growing luxuriantly in the hottest weather. Cut and it comes again; a few plants furnishing the finest flavored "greens" all summer and fall for an average size family. Plant in August and September where plants are to stand. New Zealand Spinach should be in every Southern garden for an all summer and fall crop of good "greens." Packet, 10c; ounce, 20c; $1/4 lb., 50c; lb., $1.25, postpaid.

EARLY BUSH SQUASHES

Every year the planting of the Summer or Bush Squashes in the Central South during July and August for September and October use becomes more prevalent. Every year the planting of these squashes in Florida and along the Gulf Coast, for fall and early winter shipment, becomes larger. Our people are just learning that these squashes grow and hear from summer planted seed just about as well as from the spring planted. These squashes can be planted in the Central South as late as August 15th. South Florida plantings can be continued as late as October 1st, either for home use or shipment.

Early White Bush Squash (No. 425) This is the well known White Scallop or Patty Pan Squash. It is one of the earliest to mature, very productive and of light cream color. Very popular variety for shipment to Northern markets from Florida, as well as being a general favorite for home gardeners everywhere. Packet, 5 cents; ounce, 15 cents; $1/4 pound, 40 cents; pound, $1.25; postpaid.

Hastings' Mammoth White Bush Squash (No. 420) Bush, being double the size and more regular in shape. It is a decided improvement over the Early White Bush Squash. It is very early, uniform in growth and prolific. Has a beautiful white skin and flesh, and grows 10 to 12 inches across. Fine for family gardens and nearby markets. Packet, 5 cents; oz., 15 cents; $1/4 pound, 40 cents; pound, $1.25; postpaid.

Yellow Summer Crookneck Squash (No. 421) home and market gardens. Fruits small, of bright orange yellow color, and covered with warty excrescences. Flavor very rich and buttery. Packet, 5 cents; ounce, 15 cents; $1/4 pound, 40 cents; pound, $1.25; postpaid.

Giant Summer Crookneck Squash (No. 426) A variety containing all of the good qualities of the Crookneck class, and at the same time giving double the size of the Old Summer Crookneck. For market gardeners growing for nearby markets and for home gardens it is especially desirable. Packet, 10 cents; ounce, 30 cents; $1/4 pound, 65 cents; pound, $2.00; postpaid.

Early Yellow Bush Squash (No. 424) Identical with Early White Bush except in color, which is a bright golden yellow. Packet, 5 cents; ounce, 15 cents; $1/4 pound, 40 cents; pound, $1.25.

SALISIFY OR VEGETABLE OYSTER

A most delicious vegetable grown from September and October planted seed all through the Lower South and Florida. Ground should be prepared deeply, as Salsify is a deep rooter. Sow one ounce of seed to about one hundred feet of drill. Seed should be covered about one inch.

Mammoth Sandwich Island (No. 404) A very best white variety. Attains large size, being twice the size of the Long White. In quality it is much superior to the other sorts. Packet, 10 cents; ounce, 25 cents; $1/4 pound, 75 cents; postpaid.
Tomatoes for Summer and Fall Plantings

Hastings' Big Red Rock Tomato for Home Use and Canning

Red Rock, the Big Red Solid Red Rock is beyond question the best large meaty tomato for either home use, nearly market or for canning. Red Rock matures in from 110 to 115 days. It is extraordinarily solid—hence the name of Red Rock. Perfectly smooth, has no superior in texture or flavor and is as red as a tomato can be. It's a red that goes all the way through. The meat is solid without being hard, and is of the finest flavor. Practically no waste tomatoes in a crop of Red Rock. Plant Red Rock this year. You will like it. Packet, 10 cents; ½ ounce, 15 cents; ounce, 35 cents; ¼ pound, 90 cents; pound, $3.25; postpaid.

June Pink (No. 460) A Pink Earlana. Often brings 25 per cent higher price in markets where pink varieties are preferred. Enormous bearer, frequently bearing clusters of six to eight fruits of medium size, uniform, smooth and attractively shaped. Bushes are compact yet branch freely. Excellent for shipping, a favorite with the market gardener for an extra early purplish pink tomato, and always a delight in the home garden. Packet 10 cents; ½ ounce, 20 cents; ounce, 35 cents; ¼ pound, $1.25; pound, $6.50; postpaid.

Ponderosa (No. 443) The giant of all tomatoes. It must have rich soil to be a success, but fruits are very large; purplish pink in color, solid, meaty, and very sweet. These being large and ribbed are for home use only. Packet, 10 cents; ½ ounce, 25 cents; ounce, 40 cents; ¼ pound, $1.25; postpaid.

Hastings' Improved Purple Acme (No. 441) A big improvement over the old Acme, which was so popular everywhere. One of the very earliest, is almost round and has a thin but very tough skin. Our Improved Acme is a very heavy bearer, ripening evenly all over. Has a lovely purplish shade of color, making it especially desirable as a market and shipping variety. Has few seeds; is thick, meaty and solid. It makes a desirable sort for either market or home use with its fine color and flavor. Packet, 5 cents; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, 90 cents; pound, $3.00.

Golden Queen (No. 453) Very handsome and the best large smooth yellow tomato. Meaty, solid, and sweet, with bright golden yellow color. Packet, 10 cents; ½ ounce, 20 cents; ounce, 35 cents; postpaid.

Livingston's Globe (No. 446) A most popular tomato with Florida shippers. Our seed stock of this variety is grown from Livingston's original strain and kept absolutely pure. We find it one of the earliest; fruits are smooth and of good size, firm flesh and few seeds. Very productive fruit, being short jointed and clusters of fruit form at each joint. Fruits are of right size and shape to pack well for shipment. Color of skin purplish red, about the same shade as our Redfield Beauty. Seen both in our own crops and by observation of market gardens is that about half come true globe shaped; the balance are rather flattened, but much thicker, proportionately, than other varieties. Packet, 10 cents; ½ ounce, 20c; ounce, 35c; ¼ pound, $1.09; pound, $3.50; postpaid.
HASTINGS' REDFIELD BEAUTY (No. 445) The Most Satisfactory Tomato You Can Grow

Our Redfield Beauty is of the right size, the right earliness, the right shape, the right color, the right bearing qualities, the right shipping and eating qualities; in fact, it's an all right tomato in every respect. It has been planted for the last 24 years in Florida, Georgia, Alabama, Mississippi, Louisiana and Texas, and in all tests it has proven its superiority over all the other famous varieties. Its vigorous growth, heavy and long bearing qualities and its comparative freedom from rotting under the most trying conditions of growth, make it a favorite everywhere. Of glossy crimson color with a slight tinge of purple. Grows in clusters of three to five fruits and is the most regular in size and shape of fruit of any variety known. Retains its large size until all are picked. Of perfect shape and is unexcelled for toughness of skin and solidity. Especially valuable for market gardeners who have to ship long distance or carry in wagons over rough roads. The skin does not break easily. In comparative tests it has excelled all the noted varieties put out by Northern houses in recent years; not one of them was equal to it. For the shipper and market gardener it is the least valuable, combining, as Redfield Beauty does, every desirable quality. Large packet, 10 cents; ½ ounce, 20 cents; ounce, 35 cents; ¼ pound, $1.00; pound, $3.50; 5-pound lots or over at $3.25 per pound, not prepaid.

Chalk's Early Jewel the best of the second early class of tomatoes following closely in maturity varieties like Extra Early Prolific. Fruits uniformly larger, thicker through, more solid and much finer quality than most extra early varieties. Fruits very deep through stem to blossom end, being almost round or ball shaped; about 3 inches in diameter; the inner part is very solid and fleshy with very few seeds, the seed cells being very small and fruits nearly all solid flesh. Flavor exceptionally sweet and free from acid. Packet, 10 cents; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, 50 cents; pound, $3.00; postpaid.

Livingston's Favorite A standard well known variety for home use or near by markets. Color: glossy crimson, tinged with purple. Packet, 5c; ½ ounce, 15c; ounce, 25c; ¼ pound, 90c; pound, $3.00.

Hastings' Redfield Beauty, the All Right Tomato For You All Times of the Year

Hastings' Long Keeper Tomato No variety equals (No. 448) in heat and drought resisting qualities; its resistance to unfavorable conditions being remarkable. It is adapted to the entire South. Fruits over 3 inches in diameter and bright red in color. Packet, 10 cents; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, $1.25; pound, $4.50; postpaid.

The Stone (No. 449) Extra large, smooth variety of bright red color. Used in some parts for winter shipment and a standard sort for those who grow for canning. A large, smooth, solid, meaty tomato for all purposes and a splendid variety to furnish late tomatoes everywhere. Packet, 5 cents; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, 90 cents; pound, $3.00; postpaid.

Early Detroit (No. 459) A new, early, very productive variety for either shipping or home use. Especially well adapted for growth in Florida. Color pulpy pink. Packet, 5c; ½ ounce, 15 cents; ounce, 25 cents; ¼ pound, 90 cents; pound, $3.00; postpaid.

Hastings' Dwarf Champion Tomato (No. 452) Our special strain of Dwarf Champion is the only first-class tomato of sufficient size to stand up clear of the ground without staking, thus keeping fruits off the ground. Growth stiff, upright and compact; fruits large, of bright red color; regular in size and shape and very smooth skin; one of our most popular and desirable varieties. We consider our seed crops of Dwarf Champion for the last two years the most uniform and beautiful fields of tomatoes ever grown. Packet, 10 cents; ½ ounce, 35c; ¼ pound, $1.00; pound, $3.50; postpaid.

Mansfield Tree Tomato Very strong growing variety, which has to be well tied to stakes to keep from sprawling on ground. Fruits extra large, average one pound in weight, and of fine quality. Packet, 10 cents; 3 packets, 25 cents; postpaid.

Red Pear Shaped (No. 454) Small, odd looking tomatoes. Packet, 10 cents; 3 packets, 25 cents; postpaid.

Yellow Pear Shaped (No. 450) Very strong growers, and very productive. Suitable for pickling. Each, packet, 10 cents; ½ ounce, 30 cents; ounce, 50 cents.

Yellow Plum Tomato (No. 461) Similar to the Pear Shaped but larger and plum shaped; sweet, meaty and prolific. A Girls' Canning Club favorite for preserves. Packet, 10 cents; ½ ounce, 30 cents; ounce, 50 cents.
Late Summer and Early Fall Is Turnip Planting Time

The South as a whole plants a great deal of rutabaga and turnip seed every fall. This is right. It is an important and useful crop. But—the average man who plants turnips doesn’t get the results he is due to have from his plantings. Why? Simply because he is careless and thinks it’s hardly worth while being particular enough to send off to some reliable house for rutabaga and turnip seed.

Next time he goes to town he drops in at supply merchant’s or drug store and gets some of the cheap stock that is on sale and usually more or less of a failure is the result.

Friends, the turnip is a mighty common vegetable, yet if you want right results in either home or market crops of them it will well repay you to take just as much care about turnip seed as any other kind of seed.

The turnip, rutabaga and other kinds of seed for fall sowing at merchant’s or druggist’s may be all right or it may not. In buying it you are the chance-taker.

It’s not necessary to take chances. When you have seed from Hastings’ you are sure and that feeling of sureness before planting is well worth the trouble of sending, even if you only want a dime’s worth. Further, your small orders are just as welcome at Hastings’ as larger ones. Larger ones will come later.

Early White Flat Dutch (No. 467) An old standby, and one of the most popular early varieties in the South for either spring or fall planting. Of medium size and a quick grower. Is flat as shown by the illustration, with very fine tap root. Flesh and skin pure white; fine grained and sweet. Packet, 5 cents; ounce, 10 cents; ¼ pound, 20 cents; pound, 90 cents; postpaid. Ten pounds, not prepaid, 70 cents per pound.

Early Red or Purple Top This is another popular variety of early flat turnip, being almost identical with the Flat Dutch, except for the deep red or purple color of the skin at the top of the bulb. Known in many sections as the Purple Top Flat Dutch. It’s a quick grower with very fine-grained, sweet-flavored flesh. The red top of the bulb extending down to where it rests in the soil, adds very much to the attractive appearance of this popular variety. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; pound, 90 cents; postpaid. Ten pounds, not prepaid, $7.00.

Hastings’ Early Snowball Turnip (No. 472) round, color pure white, solid, sweet, fine grained with short top. Not as fine as other varieties for “greens,” although very good. The turnips are exceptionally crisp and tender and being pure white all the way through makes a most pleasing variety to plant. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; pound, 90 cents; postpaid.

Extra Early White Egg Finest flavored of all early turnips, and with favorable seasons is ready for use in 6 weeks. Skin and flesh a pure, snow white; solid, fine-grained, sweet and a good seller. Looks very attractive bunched for sale, and gardeners with this variety have no difficulty in selling at top prices. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; pound, 90 cents; postpaid. Ten pounds or over, 70 cents per pound.

Extra Early Milan Earliest of all turnips. A flat, pur- ple-topped variety, resembling the Early Red or Purple top, but is one or two weeks earlier. Perfect in shape and color; sweet and fine grained. Seed supply very short. Packet 10 cents; ounce, 25 cents; postpaid.

Purple or Red Top Globe Our most popular variety for general planting (No. 475)ing. Medium early, globe shaped, handsome appearance and heavy cropper in all parts of the South. You cannot plant too many of them either for home use or market. Always of good quality, a good keeper and seller in the market. Packet, 5 cents; ounce, 10 cents; ¼ pound, 30 cents; pound, $1.25; postpaid. Ten pounds, not prepaid, $10.00.

PLANT A FULL FALL GARDEN
HASTINGS' MIXED TURNIPS

(No. 479) A splendid mixture of our own containing some of each variety of turnips and rutabagas catalogued by us. This mixture is made up to supply the demand of the thousands of planters who wish to make only one sowing and at the same time have a succession of turnips to supply them all through the season. This mixture contains all the early, medium and late varieties and "salad" variety for "greens." Pkt., 5c; oz., 10c; ¼ lb., 30c; lb., $1.00.

Yellow or Amber Globe

Sometimes called Yellow Stone. Undoubtedly the most handsome of the yellow sorts. Grows to a large size, flesh very firm, fine grained and keeps splendidly, well into the spring. This globed turnip of light-yellow flesh is one of the best for a general crop, excellent for table use, and its large size makes it fine for feeding stock. We have a good stock of this variety this fall and the price is reasonable. There is no better yellow globe turnip than Hastings'. Packet, 5c; ounce, 10c; ¼ pound, 30c; pound, 50c; postpaid. Ten pounds, not prepaid, 70 cents per pound.

Long White or Cowhorn

(No. 470) Roots long and carrot-shaped, one-third to one-half of which are formed above ground. It roots deeply resisting drought well. Flesh pure white, fine-grained, sweet and of excellent table quality. It is very hardy and resistant to cold. Frequently planted together with Dwarf Essex Rape for winter stock food. Packet, 5c; ounce, 10c; ¼ pound, 35c; pound, $1.25.

Southern Snow-White Globe

(No. 471) Color, pure white, shape round, size large, solid, quick in growth for a turnip, producing great weight to the acre. Rapidly growing, a piece of popular favor, more especially as a late winter and spring variety. In the autumn and early winter it is apt to be hard, but mellows like an apple in keeping. It is productive, hardy, and closely resembles in size and shape the popular Purple Top Globe. Packet, 5c; oz., 10c; ¼ pound, 30c; pound, 50c.

Golden Ball

(No. 474) A splendid and distinct yellow variety. Fine grained, medium sized variety, as round as a ball, with a clear, deep, orange color. Bulbs of medium size, a rapid grower, maturing early. Has small tap roots. This is the finest flavored of all the yellow varieties for table use. Pkt., 5c; oz., 10c; ¼ pound, 30c; pound, 50c.

Seven Top or "Salad Turnip" (No. 477)

The most popular variety for winter and early spring "greens" in the South. Very hardy, growing all through the winter. Can be cut at all times, giving a supply of fresh vegetable matter at all times. Nothing else is available can be sown from August till December and in early spring. Packet, 5c; ounce, 10c; ¼ pound, 25 cents; pound, 75c; postpaid. Ten-lb. lots, 60c a lb.

What is a Full Fall Garden Worth?

There is one more page to our vegetable list—a page offering the greatest money making Rutabaga known and the most valuable Turnip Seed Collection offered by any house in the United States.

That last page means a lot to the gardener and every other page in this catalogue lists just as good seeds at fair and most reasonable prices. You are certain to profit from Hastings' that you have the best seed grown, even regardless of price.

A Full Fall Garden, grown from seeds that you can depend on to make good will yield as many vegetables as you and your whole family can eat throughout the rest of the year. The spring garden will furnish the fresh tender vegetables all through the spring and summer, and the summer and fall garden will produce until killing frost. The excess vegetables can be canned, dried and stored for use until next spring's plantings begin to bear.

The great saving from the merchants' bills is worth a trunkful of money. The good, wholesome vegetable dinners with breakfasts and suppers, make a pleasing sight on the table, give you a good appetite, aid in digestion and makes the whole family the more eager to sit down the minute the meal is ready. The saving in drug bills and doctor's calls is another big item.

It would be very hard to tell off-hand just how much a good big home garden is worth to a family. It is surely the biggest paying piece of ground in the world, even if it's only half taken care of, and it should be worked full time.

If Mr. Hastings can have fresh vegetables on his back yard garden every day in the year as far north as Atlanta it ought to be much easier for all in the lower South to have a continuous supply and as easy for those in the upper South to keep the table full of fresh, dried, stored and canned vegetables the year 'round.

Just think what a great saving a big fall garden will be to your family this fall and all the good that comes along with it. Can't you realize how much it will be worth? Look back over these pages and make out a complete list for your fall order; then 'keep books' on your garden and you will know it pays and pays well.
HASTINGS' BIG 7 TURNIP COLLECTION 50c

The most popular of all Turnip collections. Hastings' "Big 7" gives every family in the South a full supply of early, medium and late turnips. No other seed house offers you such a bargain in GOOD TURNIP SEED as this. For 50 cents we will send you, post-paid, one full ounce each of Extra Early White Egg, Purple or Red Top Strap Leaf, Early White Flat Dutch, Purple or Red Top Globe, Yellow or Amber Globe, Improved American Rutabaga, and Seven Top Turnip. Seven ounces of Turnips, all different, of the very best grade seed, for 50 cents, delivered at your postoffice. No other varieties will be sold at this price and no changes will be allowed in this collection. If you do not want to plant all this seed this fall, what you hold over is perfectly good for next spring's sowings. This superb turnip collection is now a standard for all turnip planting in every Southern State. This collection will give all the turnips any ordinary family can use and more. Remember: These are full ounces of seed.

7 Ounces, 7 Varieties, 50 Cents, Postpaid

Hastings' Improved American Rutabaga

THE FINEST RUTABAGA IN THE WORLD (No. 468)

Our special strain of Improved American leaves nothing to be desired. It is the best and heaviest cropper of all rutabagas for the South. This variety has been grown and improved for years to meet the wants and trade of the most critical gardeners. It is of fine form, with a rich purple top and yellow flesh of very pleasing appearance. Flesh is tender and sweet and exceptionally free from stringy, hard flesh. It has a comparatively small top, small and fine roots, and is a sure and heavy cropper. If you grow rutabagas you need Hastings' "Improved American." Just look at the specimen in the photograph. Doesn't that look like a cropper?

Packet, 5 cents; ounce 10 cents; ¼ pound, 30 cents; pound, $1.00; postpaid. Ten-lb. lots, 75c a lb.
Summer and Fall Gardening

Most of our people seem to feel that they have done their duty when they have made a garden in the spring, apparently forgetting that many of the vegetables planted during the spring months must be removed during the summer, and leaves and fruit trees must be cared for during the same period. So it is possible to have a garden in the fall. Indeed, most of the fall vegetables are easier to plant and grow than the spring vegetables, and they will continue to supply the table during the winter, so that there is a possibility the year around.

Several years ago one of the Atlanta papers used to publish a weekly calendar of what could be grown in Georgia, Alabama, Mississippi, Louisiana and Texas, and the grower could count on success if he followed it and got his directions. Now, gardens "dry up" in June or July only frequently because the soil is too dry and there is not enough moisture for the plants to continue growing. They "dry up" from this cause and for the reason that the people don't plant something else to take the place of the vegetables already used up. As a matter of fact the garden ground ought to be kept under some kind of a crop all the time, and the fall gardening of the year can be done during the fall.

You Can Have a Good Fall Garden in Your State

Beans bush varieties can be planted in the northern half of Georgia, Alabama, Mississippi, Louisiana and Texas, also in North and South Carolina up to August 15th; in the southern half of these States named up to September 1st. Pole snap variety beans, which are home grown and therefore the best of the bush varieties, can be planted in the southern half up to August 15th. In Florida plant all kinds during August; the bush varieties during September, and the pole varieties during October; in South Florida all the beans can be planted with more or less safety in all the fall and winter months.

Beets The turnip-shaped varieties such as Hastings Improved Blood Turnip, Eclipse and Leutz Extra Early can be planted in the northern half in Georgia, the middle of Mississippi, Louisiana, Texas and the Carolinas during August and first half of September. In the southern half of these States beet variety must be chosen to make the crop safe. In South Texas and many of the more protected Gulf Coast sections the planting of beets may be continued during all of the fall and winter months.

Cauliflower Planting of Cauliflower is not advised during the fall months except in Florida, Southwest Texas and well protected spots along the Gulf Coast. The best be sown in late September or October for maturing in early spring months. Cauliflower will not stand heat, and to be successful must be matured not later than April 1st in those sections. The same is true of Broccoli, which resembles Cauliflower closely.

Cabbage In the Lower South, Florida, Southwest Texas and the Gulf Coast sections this is the most important fall crop. In the northern half of Georgia, very early cabbage can be planted in the southern half of Georgia, Alabama, Louisiana, Mississippi, Texas and the Carolinas in August for maturing before cold weather. Cabbage should be planted in the southern half of Florida and the Carolinas as early as possible and may be made in September and October of the flat varieties. Perfection, Surhead; Sure Crop, Centennial, Late Flat Dutch, for maturing during the late winter months. In Florida, the immediate Gulf Coast section and South Texas, in fall planting should be during the month of October for March and April maturity. Cabbage is a half hardy vegetable and will stand considerable frost, but the beginning of the formation of the head. If frozen at that time it is apt to run to seed without forming heads.

Carrots of the South, for September planting in the southern half. For Florida, Southwest Texas and close to the Gulf, plantings may be made almost any time up to December. The carrot is one of the vegetables most largely planted in the South in the fall as well as in the spring.

Celery We do not advise the planting of celery in the fall except in South Florida, and even there the plantings should be made in that section August and September. We suggest planting celery in the northern half of the South, September and October sowings are the most desirable for March and April maturity.

Cucumber vegetable it can be planted in August and early September for quick maturity along the Gulf Coast and in Florida. Limited areas of this are found profitable in South Florida for spring sowings in March and April.

Eggplant Not advised for planting in the fall except in South Florida. July and August plantings will mature in that State in about 110 days, and like cucumbers limited areas are found profitable for shipments from South Florida during the winter months. Peppers are adapted to similar conditions.

Kale or Borecole Entirely hardy in all parts of the United States. They may be planted in the northern half of the South, September and October sowings are the best. In Florida and Gulf Coast sections plant up to January 1st. Kale should be in every garden in the South for winter and early spring greens.

Lettuce One of the most widely grown and largely planted of the "salad" vegetables. Requires rich or well manured soil and plenty of moisture for quick growth. In northern Georgia, Alabama, Mississippi, Louisiana and Texas, lettuce can be planted during August and up to September 15th. In the southern half these sowings can be continued up to October 1st. In Florida, Southwest Texas and protected Gulf Coast points planting lettuce during the fall can be made as early as August 1st. The best months are October and November. Where the garden has cold frames or protected beds lettuce can be planted and grown in them during all the cool winter months.

Mustard Largely planted in family gardens in both fall and spring. In the more northern sections of the South, August, September and October sowings are best. In Florida and the Carolinas, however, the fall plantings are the most profitable. In Florida continuous sowings can be made October to February.

Onions Plant sets of the hardy varieties (Yellow Danvers and Silver Queen) in the northern half in September and October; in the southern half, also Florida and Southwest Texas, plant seed of the Bermuda during October. Sets of all the onions can be planted in the garden in the fall. See the list on that section, but the Bermuda varieties from seed are preferable.

Garden or English Peas Extra early shallots such as Surprize and Alaska can be planted in northern half of Georgia, Alabama, Mississippi and Louisiana in August; in the southern half plantings of them can be made as late as September 15th. In Florida, South Texas and near the Gulf plantings can be made both of the extra early and second variety. In the northern half the plantings should be almost any time during the fall and winter months. Peas are fairly hardy in late fall plantings.

Radishes In the northern half of Georgia, Alabama, Mississippi and Louisiana, Texas and the Carolinas, mid-summer sowings are the most desirable; fall sowings may also be made. In Florida, the fall sowings should be down to the month of October for March and April maturity. Succession plantings of radishes may be made every ten days to two weeks from August 15th to October 15th. In the southern half of those States, also Florida, plantings may begin in September and continue at intervals all through the fall months. Good, or well fertilized soil, with sufficient moisture to insure quick growth is necessary to make crisp, tender radishes.

Squash We would advise starting this in the northern half of this general district except between August 15th and 1st. In the southern half plantings can be made up to September 1st. In South Florida the bush squashes can be planted almost any time from mid-July; the pumpkins should be in the ground by the end of July in the northern half of the South, September and October sowings are desirable in the South. In Florida and Gulf Coast sections November and December plantings are best.

Tomatoes Plant in the northern half of Georgia, Alabama, Mississippi and Louisiana, Texas and the Carolinas during the fall, up to August 1st. In the lower half to August 15th and in Florida and Southern Texas they make a regular fall and early winter crop. In the northern half of the States, also Florida, plantings may begin in September and continue at intervals all through the fall months. If plants are frozen the green fruits will ripen in the house.

Turnips all the States except Florida, South Texas and immediate Gulf Coast sections. The planting season opens with plant-}

bags in July and August, followed two or three weeks later by the herd varieties of turnips such as Purple Top Globe, Flat Dutch, While Ace, Purple Top, etc., followed in September and October by the "salad" varieties like Seven Top and Southern Prize.
Head and shoulders above every otherfarm paper in the South stands the Southern Rur alist, that best of all practical, common sense farm papers.

There are more than one hundred publications being mailed through the Atlanta post office and not a single one of them has the number of readers and the influence that the Southern Rur alist has.

The time has come when the successful farmer must read, keeping up with the new things in the agricultural world, developments and betterments of methods outside of his own immediate neighborhood.

The farmer who is to succeed in his line of business as other men succeed in other lines of business can no more afford to get along without one or more good farm papers than he can get along with an old style plow or cultivator when something that will do more work and better work is available.

Regardless of whether it be farmer or mercantile or manufacturing, the men who are in it must needs know all they can if full measure of success is to be attained. The more information he can get the better prepared he is to meet his problems.

We read the Southern Rur alist regularly. There is hardly an issue printed that doesn't carry some item of farm information that we can make use of on the Hastings Farm and we are mighty glad to get it regular. We have a fair amount of useful farm information comes to us through the Southern Rur alist or by word of mouth. The main thing is to get the information and be reasonably sure of its reliability.

Farming isn't what it used to be in the days of our fathers and grandfathers. We have farm problems, plant diseases and insect pests that were unheard of in their day. If we are to succeed we must farm on a 1919 basis instead of on the father or grandfather basis.

If we don't keep up with the changes we won't last long in the farming business.

You may think it strange that two pages of this seed catalogue is taken up with the merits of and special price offer of an agricultural periodical. But the more our farmer friends read the good and practical ideas and put them in practice on the farms, the better crops at less cost they will produce. This makes a better farmer in every respect and a better seed buying customer of good seeds.

The farmer man who reads and acts on the knowledge acquired will now grow diversified crops, he is a candidate to buy better seed of better varieties. He will give the garden the attention its importance deserves and in time he gets better fixed in a money way his wife will want and be willing and able to buy flower seed and things which we sell.

The Lord help the seedsmen who has to depend on the others he can get out of the exclusive cotton planting, "land skinning" farmer who can't any further ahead than a supply merchant to run him, and who as a rule hasn't got the price of a nickel package of collard seed ahead in his pockets. The seedsmen depend on business from that kind of a non-reading farmer would go broke in short order.

We all need to read more and think more about what we read and in that reading we want to make the right start by reading the right kind of a farm paper.

Why Not Read the Best Farm Paper

This is an absolutely fair, common sense question. Why not? Why not read the best farm paper, one that is edited and printed for your particular section so that the farm information contained therein would be misleading in any way.

When you begin to study about buying a new plow or cultivator you are not going to buy a plow for instance made for and adapted to lowa prairie soil. You are looking for a plow or cultivator to fit Georgia or Mississippi or some other Southern state as the case may be. That particular implement wants to be and must be adapted to your particular conditions. We want every farmer that buys the Iowa and Ohio or New York man isn't what you want and would be more or less of a failure if you tried to use it on a different kind of soil than it was built to serve.

It's exactly the same way with farm papers. There are some splendid farm papers published further north. They are fine for the farmers in their particular section but the conditions they serve are different from the ones you work under. You must have a farm paper edited and made up by men who know the South, know exactly the soil conditions you have, the problems of plant diseases and insect pests that you have to combat, the fertilizing problems, etc., the hundred and one things that the farmer of the South has to deal with which the farmer and farm paper editor of the North knows nothing about.

We believe absolutely in the Southern Rur alist. We have seen it grow from a little four-page monthly with 500 circulation to a magnificent standing and influence, 24 to 48 pages each issue and going to some three hundred thousand farm families twice each month.

Such growth could only come from giving satisfaction to the readers, giving each year many times the value of the small amount spent for it.

Knowing the Southern Rur alist as well as we do enables us to sell it to you at the absolute guarantee of your money back if you are not satisfied. See this "money back" offer below. We have handled tens of thousands of subscriptions for the Southern Rur alist in this way and have yet to have a single subscriber ask for his money back.

Below will be found the special offer. On the opposite page will be found some things about the men who make the Southern Rur alist and their experience, farm work, as well as the specialists who write on special subjects.

It's a great paper, the best farm paper, the most practical farm paper in the South. The publishers can get along without you for a reader but you can't afford not to read the Southern Rur alist if you want the largest measure of success on your farm.

SPECIAL PRICE AND MONEY BACK OFFER

Due to the increase in postal rates and the use of the "Zone system" in calculating postage on papers we have had to stop our usual "half-price" offer of the past. For these raises in price you can thank your Congressmen and Senators who voted indirectly but knowingly to increase the price of your reading matter. In our opinion it was an uncalled for piece of legislation and had it not been for the votes of Southern Congressmen and Senators the increase would hardly have been passed through Congress. The regular subscription price of the Southern Rur alist is 50 cents per year, about 2 cents per copy. If sent in with your seed order we can have it sent to you for 40 cents; that is if you live in Georgia, Alabama, North or South Carolina, Florida, Mississippi or Tennessee. If you live in any other state or foreign country the price is 50 cents per year.

If you send in your youth each month's subscription must be to be a reader worth while; know that if you read it and use the information you will gain dollars for every cent spent for the paper. Let no one say "I can't afford it" for that tale won't go. Less than two pounds of cotton, about a peck of corn or a couple of bags of oats would purchase the Southern Rur alist for a year.

On top of this we will guarantee that any time within three months we will refund the money paid and have your subscription stopped if you are not fully satisfied.

In this offer we guarantee full satisfaction and money back if you don't think it worth it. You need the Rur alist. Every issue of the twenty-four during the year you will find helpful. Through us you can buy it for 40 cents, with an absolute, positive guarantee of your money back if you are not fully satisfied at the end of three months. You can get anywhere in this world a flarer, squarer offer than that. Just enclose 40 cents extra with your seed order for the Rur alist for one year. We will start it coming promptly.
THESE ARE THE PRACTICAL FARM MEN OF THE SOUTH WHO MAKE IT

H. E. Stockbridge  We don't hesitate a minute to say that in our opinion Dr. H. E. Stockbridge is the best agricultural editor on any farm paper in this country. First and above all things, he is a thoroughly practical farmer, and one of very wide experience. Second, he is thoroughly equipped from a scientific standpoint. He is the owner of a large plantation in Sumter County, Georgia. He has been director of both the North Dakota and Florida Experiment Stations, and when the Japanese government wanted to organize a national department of agriculture many years ago, Dr. Stockbridge was the man chosen to organize it and he spent four years in that country. With his national and international reputation and having been twice President of the Farmers' National Congress he tells you exactly what you need to know. He has a way of putting the great scientific facts and truths relating to farming in such plain, simple, understandable words that even the most uneducated man is never at a loss to know exactly what he means. All agricultural matter for the Southern Ruralist goes under Dr. Stockbridge's eye and you can rest assured that unless the information is practical and workable it doesn't get into print through the Ruralist.

F. J. Merriam  He is another practical man who has done an almost lifetime's work in the years that he has been at the head of the Southern Ruralist Company. Under his management the Ruralist has grown from a little 8-page monthly paper of a few thousand circulation to the present 24 to 36-page, twice a month, leading agricultural paper of the South, going into over 300,000 Southern farm homes regularly.

Mr. Merriam is a thoroughly practical Southern farmer. He knows exactly what it is to be in close touch with the soil and dependent on the right handling of the farm for his living. First, in Florida, and later here in Georgia, he has made his living and all his living from the soil.

Like Dr. Stockbridge, Mr. Merriam knows farm prosperity and farm troubles. On the farms near Atlanta he has had to "buck-up" against exactly the same things in farm methods and farm management, bad weather and good weather conditions, etc., as you have. He is practical because he has had and is getting farm experience right along. Mr. Merriam and Dr. Stockbridge know by actual experience and they pass the experience along to Ruralist readers through the Ruralist twice each month.

THE SOUTHERN FARMERS' MONTHLY EXPERIENCE MEETINGS

In addition to the editorial and special lines carried by Dr. Stockbridge and Mr. Merriam there are special departments, such as Dairy and Live Stock, Veterinary, Farm Machinery and Mechanics, Horticultural and Fruit Growing, Poultry, Home Department and many others, each conducted by a specialist in that particular subject.

With all due respect to Dr. Stockbridge, Mr. Merriam and their special associates the most interesting part to us is the every month "Experience Meetings" of farmers and farmers' wives. It goes under the general head of "What Farmers Are Doing" and it's open to any one to tell what they have done on their farm. The subjects vary, of course, from month to month, but the competition is absolutely open to everyone. The "one-horse" farmer has an equal chance with the big plantation owner to write for the Ruralist. Ten or twelve of these are published each month and we are sure you will enjoy these accounts of actual farm "doings."
HASTINGS' 100-BUSHEL OATS

BEST of ALL HEAVY YIELDING RUST-PROOF OATS for the SOUTH

We want you to take a good look at the picture of a Georgia oat field at harvest time in May, 1918. It was a hard winter, thermometer down almost to zero, and yet Mr. Thomas G. Scott, of Monroe County, Georgia, harvested one of the best crops of Hastings' 100-Bushel Oats that he has ever grown for us.

On every hand were complaints of winter killing of oats, yet Mr. Scott's crop was practically unharmed. It was a plain case of sowing early on well-prepared fields. These were not even plowed in as deep as the usual "open furrow" system puts oats in. They were drilled in with a regulation grain drill.

Mr. Scott grows for us for seed purposes from 5000 to 8000 bushels of 100-Bushel Oats, and he considers oats one of his best crops.

His success coming along so regularly is due first to good farming and a proper system of crop rotation. Second, he plants the best variety and before he plants it all the seed is sent up here to Atlanta for a thorough recleaning and grading in our grain-cleaning machinery.

One result of this system carried out year after year is that Mr. Scott's grain fields are practically free from weeds and about all our machinery has to do is to take out the smaller and partly developed grains.

Mr. Scott isn't afraid of farm machinery or time and muscle saving. Note in the picture the tractor pulling the binder, and attached to the binder disc harrows are cutting the stubble ready for a broadcast sowing of cowpeas for hay and soil enrichment.

Harvesting a Crop of Hastings' 100-Bushel Oats in May, 1918, on Farm of Thos. G. Scott, Monroe County, Georgia — This Crop Came Through Nearly Zero Weather in January With Little Damange

On the next page you will see an illustration from a photograph of a bunch of Hastings' 100-Bushel Oats. Note the heavy, well-filled heads and long stiff straw that helps a lot in preventing beating down or "lodging" in heavy storms that sometimes occur after heading.

For paying, worth while oat crops the planter must have a good heavy yielding well-adapted "rust-proof" variety, and then strong, vital, recleaned and graded seed of that variety. We can furnish both the right variety and really recleaned and graded seed.

Hastings' 100-Bushel Oat is a true strain of Southern rust-proof oats. For an all around general purpose oat you can find nothing that will compare with it. Planted in early fall it grows off quickly and has proven almost as hardy as rye. Stools out strongly and makes the best kind of grazing for cattle, hogs, horses and mules during the winter and early spring.

Grains are exceptionally large and heavy, usually weighing 40 pounds or over to a measured bushel. It's really a thoroughbred. Just the sort of oat you ought to have growing on your farm. No matter where you live in the South, if you are in the fall oat planting section this is the one variety above all others for you to plant.

Oats are easier grown than corn, cost less to make and are a far better feed in summer for work stock, being less heating. Furnishes a combination of grain and hay feed in case it is inconvenient to thresh them out.

Besides, on most farms, corn has the very bad habit of giving out before new corn comes in, and it's far better to make oats than to be compelled to buy corn or oats at such high prices.
Too little attention is paid by farmers to the quality of seed planted, especially seed grain.

On our part we knew that we could not furnish the best unless we first grew or had grown for us the best quality possible and then re-clean it of weed seed and small undeveloped grains. This necessitated our spending thousands of dollars for re-cleaning machinery, steady, regular and effective in seed cleaning.

It is no exaggeration to say that the Hastings system of re-cleaning and grading increases the stand by at least 15% over seed not re-cleaned, besides every plant coming up is capable of making a vigorous plant giving a maximum yield.

Any time you are in Atlanta during late summer and fall drop in and see what re-cleaning and grading does for what one would consider a good sample of oats or other grain. It's simply amazing the amount of chaff, dirt, weed seed and small or partly developed grains that are taken out in re-cleaning by our electric power driven machinery.

“100-BUSHEL OATS” IN EIGHT SOUTHERN STATES

**Georgia** Mr. Thomas G. Scott, Monroe County, Georgia, grew 1000 bushels of Hastings 100-Bushel Oats on exactly 19 acres of land after the extreme cold winter of 1918. “These 1000 bushels of oats on 19 acres certainly shows that these oats are true to name.” These oats were planted between cotton rows on red clay hills of middle Georgia and Mr. Scott picked a hale of Hastings Bank Account Cotton per acre the first he planted oats that the seed is easily grown and the land was in much better shape for being protected during the winter.

**Florida** “I planted on November 15th a half bushel of your 100-Bushel Oats, open furrow system, without fertilizer. I commenced cutting for green feed for four cows on December 17th, feeding once a day. I am still cutting; they are a regular cut and come again out for green feed in winter. 100-Bushel Oats for me first, last and all the time.”—Mrs. J. M. Fitzgerald, Hamilton County.

**Alabama** “100-Bushel Oats are the best. Made fifty bushels per acre, other oats on same land made only 39 bushels per acre.”—W. H. Harris, Pike County.

“I planted the six bushels of 100-Bushel Oats in November and they are looking fine. Expect to make 50 to 60 bushels per acre. I am a regular customer of yours. I think your seeds are easily the best in the South.”—Henry Kissett, Marion County.

**Mississippi** “I had fine results from the 100-Bushel Oats. I do not know just how many oats I gathered but they were the best I ever saw grow. Your efforts to improve the Southern farmer ought to be appreciated and I long to see the day when the South will make all her own grain and meat.”—I. H. C. Cook, Forrest County.

“100-Bushel Oats is the most vigorous looking oat that I have ever seen. Your seed have proven very satisfactory; this is more than I can say for some seedsmen in—any other points.”—O. M. Harrill, president of Bank of Honika, Chickasaw County.

**Louisiana** “The best variety that has ever been seen in this country. They are strictly rust proof, which is a great point in their favor.”—G. R. Jordan, Jackson Parish.

**Texas** “This season I threshed 3,008 bushels of 100-Bushel Oats from 27 acres of land. (This is an average of over 111 bushels per acre.) Some men estimate that 150 to 200 bushels more were wasted in the field. I would like to have your prices on fall grains of all kinds.”—C. A. Gordon, Brown County.

**South Carolina** “Last fall, a year ago, I bought from you some of your 100-Bushel Oats, and I made 100 bushels per acre.”—J. J. Bethes, Dillon County.

**North Carolina** “Am well pleased with the 100- Bushel Oats bought of you last fall.”—W. S. Perelmo, Moore County.

**PRICES**—Hastings’ 100-Bushel Oats

Persons or dealers selling farm run of oats regardless of the quality of the crop and not re-cleaned or graded can undersell us. So can a farmer claiming to sell re-cleaned seed grain when it has only been run through an ordinary sifting mill. If you buy from Hastings you are sure of two things: One is that the seed is of the very best vitality, 95% germination or above, and the second is that the seed oats or other grain are just as clean and free from dirt, trash, weed seed, chaff and small or undeveloped grains as the best re-cleaning machinery we can buy can make them.

Further, every bushel of seed oats we ship out is sacked in new, sound bags, insuring so far as new bagging can full even weights and safety. We state these things hereon as a mark of the service the Hastings organization renders you. Our prices may be higher per bushel, but we furnish you more for your money than you get from lower price sources. We thought we could name at least an “about” price before this page went to press, but we cannot. Write when ready to buy for our very best prices on amount you want; sample and freight or express rates to your station if you desire.
FULGHUM EARLY OATS

This comparatively new early variety has taken Georgia almost by storm for an early oat, and is very hardy and perfectly suitable for fall sowing in all parts of the South, provided, of course, that it is planted by the “Open Furrow Method.”

We have watched this new oat with great interest. We placed seed stock of it in the hands of our most expert seed growers and based on our observation and experience and the experience of our growers we have not a word to change from what we stated about this variety in our fall catalogue for 1914, which we reprint below:

“This new oat will, we believe, fill a distinct place in Southern oat growing. We do not expect it to take the place of the regular rust proof main crop strains such as ‘100-Bushel,’ Apple and others but it has a distinct place to fill.

“Extravagant claims have been made for the Fulghum for extra earliness, large yields, etc., which have not been borne out by actual test. However, it is a good early oat with exceedingly heavy straw. A three-year impartial test by one of the Southern Experiment Sta-

GENUINE APPLER OATS

A selection from the Texas Red Rust Proof made years ago in Georgia, and was the best variety up to the introduction of our “100-Bushel.” Still largely planted but yield is usually 25% to 30% less per acre than the “100-Bushel.” It is a genuine “rust proof” strain. Write for best prices, samples and freight rates as soon as ready to buy.

Price Notice On account of the uncertainty of the seed stocks and variations in market price conditions we cannot make definite prices on most seed grains at the time this catalog goes to press, but we shall be glad to give you special prices on request as soon as you are ready to buy. Use Special Quotation Sheet in back of catalog and we will give you the best of Hastings’ Service.

TEXAS RUST PROOF OATS

Genuine Texas grown seed. We get this variety direct from Texas in solid car lots. While we do not recommend it as compared with “100-Bushel” and “Apple” we can supply the very best recleaned seed with the weed seed and Johnson Grass, almost invariably found in them, removed. Write for best prices, samples and freight rates as soon as ready to buy.

Grain Smut AND HOW TO PREVENT IT

With the rapid increase in acreage and production of oats, wheat, rye and barley in the South in the last few years there has naturally come with it an increase of the enemies of these crops.

Years ago “rust proof” varieties of oats were originated and the losses from “rust” in the South were so small as to be almost unworthy of consideration. “Smut” of oats, wheat and barley is now spread over the whole South and the damage from it, unless checked, is serious.

The “spores” (or seed, if we may so term it) of grain smut are carried in various ways. The wind blows them from infected to unininfected fields. The public threshing machine is a great sinner in this direction, going from one farm to another. We might mention others, but it is unnecessary.

There is hardly a grain growing section in the South that is not infested with smut.

Smut spends its dormant or winter season on barberry bushes, so it is well to keep all barberry bushes cut close to the ground.

Weather conditions the past few seasons have been especially favorable to its spread and steps must now be taken to stop it. Smut can only be prevented by treating the seed just before planting, and it ought to be done regardless of whether you plant home grown seed or buy it from us or any one else. It ought to be done every season on oats, wheat, rye and barley.

What is known as the “Formalin” or “40% Formaldehyde” treatment is most satisfactory. The day before planting spread your seed grain on the barn floor and sprinkle it thoroughly with a solution of one pint of formalin to forty gallons of water. After sprinkling, stir the grain until all parts of the pile are well dampened, then spread out thin and cover with a sheet that has been soaked in the solution for several hours. Another way is to make a formalin solution of the same strength, in a barrel, dip the bag of oats or other grain in it, let stand for 30 minutes and then spread out to partly dry. Either of these methods will swell the seed grain some and the grain drill should be opened up a little more than for perfectly dry grain.

Formalin is, or should be, obtained at any drug store, but to be sure you had better get it ahead of planting time and take no chances. One pint of formalin will make enough solution to treat 40 to 50 bushels of grain.
ABRUZZI RYE—We Have Grown it for Six Years and do not Hesitate to Say it is the Best Rye for the South

**Southern Rye and Barley** Fall sown winter rye and barley are becoming more and more popular in the South every year as a winter and spring crop for grazing and cutting for green forage. They are very hardy, and will grow on poorer land than almost any other grain crop. They make excellent winter and spring pasture, and if sown very early can be grazed in the late fall.

**Winter Barley** In recent years there has been a great increase in barley planting, especially by poultry raisers, who want it for winter green feed and grazing. The seed stock which we have is the “bearded” variety. We will not supply beardless barley, which has generally been unsatisfactory South. Barley prices change during the season. Write for prices when ready to buy.

Hastings’ Genuine Southern Grown Winter Rye

All rye which we handle is strictly winter rye and perfectly hardy. It is Southern grown and adapted to this entire section, either for winter grazing or grain production. With half a chance it almost invariably “makes good” wherever planted in the South. Every bushel of rye that goes out from this house is right stock. We know exactly from where it comes. Every bushel of it goes through our reconditioning machinery, which takes out all dust, trash and light grains that are left by threshing machines. It’s exactly what you need to make a successful rye crop next winter.

**Prices**—On account of the great uncertainty of seed stocks at the time this catalog goes to press we can’t make definite prices on field seeds, but when you are ready to buy, just write us and we will give you the best prices possible. Use the special yellow quotation sheet in the back of this catalog and send it in as early as you can afford to buy.

New Abruzzi Rye

Some sixteen years ago agents of the United States Department of Agriculture found a variety of rye in one of the Italian provinces and sent a quantity of it to Washington. From there it was distributed to various parts of the United States. In this way a prominent planter of South Carolina got hold of it. Its remarkably rapid growth so soon after planting attracted his attention and the small patch was carefully watched.

We have grown it for six years and do not hesitate to say that it is as far ahead of the Southern rye as the Southern is ahead of Northern rye. We grew about one hundred acres of Abruzzi Rye on the Hastings Farm this past season and each year we are better satisfied with it.

The Abruzzi Rye stools out quicker and heavier than any rye we have ever seen and quickly covers the entire ground. It can be pastured a month to six weeks earlier than other varieties of rye or oats.

So far as we can learn it has succeeded equally well on stiff clay lands and the sandy lands of the Lower South. For the dairyman this quickness of being ready to pasture will make it invaluable, and for all others it is certainly well worth while planting a variety that will make 30 to 100 per cent more pasturage or hay in a season than the older sorts. We believe that the Abruzzi Rye will, in time, displace all other varieties of rye in the South, and you certainly ought to get a start of it this fall.

Pound, postpaid, 35 cents; 3 pounds, $1.00. Write for quantity prices when ready to buy.
YOU CAN GROW GOOD WHEAT TOO

It's time for most of us to get our eyes open to plain facts. The South grows many millions of bushels of wheat every year, yet how often do you ever see a field or even a small patch of wheat in your neighborhood?

All parts of the South can and do grow good wheat. It's merely habit that we have started looking on wheat as a product of the colder sections. Egypt is a great deal warmer country than any of the Central, Southern and Gulf States, yet wheat has been grown or been grown as a field crop of that country for thousands of years, back as far as history goes.

Now, a great many of us don't realize that the yield per acre in the South, with intelligent handling, is heavier than the average yield per acre of what are known as the wheat growing states of the North. We have a corn crop growing on land this year that six years ago produced 51 1/2 bushels of wheat on a measured acre. The illustration below is from a photograph of a field of wheat that yielded 33 bushels per acre.

If any one state would be classed as a non-wheat growing one, it would be Florida, and yet one of the best crops of wheat we have seen was grown in Bradford County, Florida, a hundred miles or more south of the Georgia line. We could go on and repeat the details of stories of Alabama and Mississippi planting hundreds of acres with good wheat, but it is unnecessary. The South can grow wheat and grow it profitably. Do you?

There are a million or more farmers in the Cotton States that never grow an acre of wheat in their lives. They can buy wheat (by the bushel) grown north, milled north, shipped from the north, and unless they pay an extra price for the extra fancy flour, they usually have occasion to "kick" about the price of a pound of flour.

Our Southern wheat is of the best, the quality of the flour from it is the best. If you want the best of flour, grow your own wheat here in the South and have flour made here. Any miller who can be assured of reasonable acreage in wheat is always glad to put in any necessary machinery for milling it.

Wheat growing is one of the necessities of a good, all around, profitable "live at home and board at home" system of farming. They buy wheat (in the shape of flour) that will put the South where it ought to be, the wealthiest and best agricultural section, not only in the United States, but of the world. Wheat planters never regret their starting to plant it.

WHEN AND HOW TO PLANT

It is impossible, in a general catalogue like this, to give detailed instructions. If you are really interested in wheat and other grains we shall be pleased to send you our "Grain Book."

The best time to plant wheat in the Southern States is from the middle of October to the middle of November. The aim in any locality is to give the plants a chance to get well established before freezing weather sets in. However, one of the best wheat crops we ever saw in this section was planted the day after Christmas. Seed should be drilled in rather than broadcasted. The "open furrow" system for planting oats will answer splendidly for wheat.

In commercial seed users, the Georgia Experiment Station recommends at seeding time 200 lbs. acid phosphate, 50 lbs. of muriate of potash, 350 pounds ammonium nitrate per acre, followed by 75 pounds nitrate of soda in the spring, about 10 days before time for first heads to appear. In seeding early use one bushel per acre. In late planting, say after November 15, you had best use from 1 1/2 to 2 bushel more seed.

Leap's Prolific Wheat This new wheat, after carefully growing it on our test and breeding farms, we find to show up better than any other variety of wheat that we have ever tried. We do not jump to this conclusion, but have tried it out right along with some seventy-five other varieties and in every case test it has shown its superiority. To do this it must be planted where plant; all agree with us in the seedling stage. It is early, stiff and long in the straw, white chaff, large in the berry, dark in color, hard, and hard, and you won't find a heavier bear for the bushel. The hard, dark, large in grain and a gross in the state of Tennessee. Write for prices, sample and freight rates to your station when ready to buy.

Red May Wheat We have never been able to see where this variety was any earlier and better than the Blue Stem, although many prefer it to that variety, claiming great earliness. It's a good variety and a grass variety in the state of Tennessee. Write for prices, sample and freight rates when ready to buy.

Special Prices Use the "Special Quote Sheet" in the back of this catalog, telling us the amount of field seeds you expect to buy and we will send you our best prices and tell you what the freight or express will be on that amount to your station.
HASTINGS' GRAIN PASTURE MIXTURE

Best Pasture for Stock and Especially Hogs Throughout the Fall, Winter, Spring and Early Summer

Hastings' Special Grain Mixture for Hogs and Cattle will supply you more and better green pasture during the fall, winter, spring and early summer than any other combination we know.

This special grain pasture mixture is made up of the finest winter growing grains and forage crops, including Oats, Wheat, Rye and Barley for grazing purposes with enough Genuine Winter or Hairy Vetch and Essex Rape in just the right proportion to add variety to the pastures.

Our customers have asked us so often for a combination of this kind that we have made up this special mixture of our very best reclaimed seeds which we can recommend for practically all sections of the South and which furnishes a quick and heavy pasture growth at the seasons when other crops fail. You can depend on Hastings' for the very best combination and mixed from the correct proportions of the very best seeds that will grow off and make a splendid pasture.

Many mixtures of this kind are made up of "left-over" stocks and filled in with anything that is cheap enough to sell at the price advertised. There is no such mixture. This is a mixture of the very best grasses and legumes. There is no reason why every Southern farmer shouldn't have a plenty of good green pasture for his stock—and particularly hogs. It is quick-growing and a one season pasture.

If you keep the stock off while the ground is wet your land will be much better off for having this pasture; trampling wet soil is sure to make it cuddly and unfit for early spring planting. It acts as a cover crop, keeping the land from "washing" during the winter rains and turning under before the summer crop builds up the soil. The grazing stock will manure the land, saving fertilizer and spreading it, the vetUniform legume will put nitrogen in the soil and as well as your land stock will be a lot better off for having planted Hastings' Special Grain Pasture Mixture.

Hogs and Feed

The South has been coming to the front mighty fast during the past few years in the matter of hog raising. You can hardly pick up a paper and not find in it an article or two about a sale of prize hogs from some Southern farm, to say nothing of the "Boys' Pig Clubs" which have become so popular and so successful in every Southern state. And all this pork production means increased prosperity and good living throughout the section.

Let us keep up the good work to the very top in this line. When you strike a farming country where you can hear the fat porkers squealing soon in the morning, and the first spell of good hog killing weather comes in the fall, you are among folks who know what good to eat, and if you get an invitation to stay to dinner, you'd better accept it. If there's anything better than country cooking the Southern way, it's pork and green peas, country ham with red gravy, or home cured bacon fried crisp, with coffee and biscuit for trimmings, tell us what they call it!

But to raise hogs successfully and profitably, nuts, chufas, sorghum, velvet beans, cowpeas, and other crops are all pork producers, and all are easily grown in the South. In fact, there is another item in the way of hog food that we must have, and that is plenty of pasture. So far as summer pasture is concerned, we are well supplied, for in almost every part of the South we have plenty of natural pasture suitable for hogs, or we can have good Bermuda pasture, and we can grow any grass pasture. A combination of grain, such as corn or peanuts, with good grazing, will produce astonishing gains in pork during the fall and winter months. It is with this in mind that we have made up our "GRAIN PASTURE MIXTURE."

Don't pick up the poorest piece of land on your farm, and expect it to produce good pasture. Use good land. Just as good as you have, but you can improve it for this purpose. If the land is rich, you can produce a great deal more and better pasture than you can on a large one. Another thing which is important; try by all means to have the land sown for hog grazing purposes divided up into two or more lots by cross fences so that the hogs can be changed from one lot to another. You will find this one of the very best ways you can do, to get the best results from grazing hogs. Where the hogs stay on one field all season, the grass is not so closely, and many of the plants die out or are winter killed. By changing the hogs from one lot to another, the growth is not so much injured, and comes back hard after the hogs are removed. This is a very important feature in getting first class results, and we urge it in all cases, where possible.

If you put it on good land, and figure when you plant it that you are planting a real crop, that is to give your hogs real feed during the fall and winter. Give it a fair chance, and it will give you first class returns, and your hogs will go into the smokehouse in the very best of shape so far as flesh and condition is concerned. Plant our "WINTER HOG PASTURE MIXTURE," make your own meat, and don't forget to invite us in to stay to dinner when we pass your way.

Prices, not prepaid 50-pound bag, $3.75; 100-pound bag, $7.50.
DWARF ESSEX RAPE (No. 400)

The South is favored with a long list of summer growing feed and fattening crops.

In late winter and early spring rye, oats, wheat, barley, etc., furnish splendid grazing.

There is, however, a need and a place for an extra quick growing green forage crop for use any time during fall, winter and spring and our Dwarf Essex Rape fills that need exactly.

To show the increasing popularity of rape it's only necessary to tell you that we are selling some thirty times as much seed of Rape now each year as we did a few years ago.

Dwarf Essex Rape in its top growth looks very much like rutabaga turnips, but does not form a bulbous root. It can be sown with the best of results any month from August to April. According to soil and season rape grows from 15 to 30 inches high. It is a splendid green feed and forage crop relished by all kinds of stock but is principally planted for hogs and poultry.

It makes an exceptionally fine hog pasture, is also excellent for sheep, all sorts of stock, eating it greedily, and it puts and keeps them in fine condition.

At one of the Experiment Stations an acre of rape was used to pasture 20 hogs for three months in connection with a small grain ration at the same time.

A crop of rape is ready for grazing in 8 to 10 weeks from time of planting. It's valuable not only for pasture but green feeding. It can be grown successfully and profitably on any soil that will make a crop of turnips or rutabagas, and in case your turnip greens or spinach patch runs short, you will find a mess of greens from the rape patch a mighty good substitute on your table.

Well Developed Plants in a Field of Our Dwarf Essex Rape

For rape put your land in good condition by plowing and harrowing down fine. Plant any time during late summer, fall or winter. If sown broadcast use 8 to 10 pounds of seed per acre. If in drills like turnip or rutabagas, 3 to 4 pounds is sufficient. If broadcasted cover the seed by a light harrowing. If there is a shovery season rape can be planted between the corn rows at the last working.

Rape is quite hardy and will stand practically unharmed any usual cold anywhere in the Cotton Belt and lower Gulf Coast section.

Rape can never become a pest as it belongs to the same general family as the turnip and rutabaga. When planted under favorable conditions of soil and season, it makes an immense crop of green foliage, juicy and succulent, and often at a time of year when little green feed is available.

If you have hogs or poultry to feed through the winter you can't afford to be without a rape patch. Once you have one, you will never be without one in the future.

We know of no crop plantable at the time of year suitable for rape that will bring you in so great a return for so little expenditure of time and money for seed.

It is estimated that there is in Georgia alone more than a million more hogs than two years ago. Other Southern States have also made great strides in hog growing during the last two years. Every one of these hogs need rape pasture during this fall and winter.

Every poultry raiser needs at least a small patch of rape to furnish green feed during late fall, winter and early spring.

DWARF ESSEX RAPE (No. 400), 30 cents per pound, postpaid.

Not prepaid: Ten-pound lots, 15 cents a pound. Write for large quantity prices.

Plant Rape for Hogs or Poultry
Bur Clover No. (503)
A Builder of Land and Animals

That may seem a queer way of putting it, but it expresses exactly what Bur Clover will do. It’s a builder from start to finish, adding nitrogen to the soil for succeeding crops, adding vegetable matter, holding plant food from washing away in winter rains, and building up your live stock every day when it is allowed to graze on the clover during the fall, winter and spring.

The most astonishing thing about Bur Clover is that so valuable a plant is so little known or used in this section. It is one of the most valuable winter grazing, soil improving crops there is known. It is an annual plant, coming from seed each year, furnishes the best of grazing all through the winter, and if grazing is stopped late in March it will make a good hay crop in May. However, most prefer to let it go to seed, thus reseeding the winter’s grazing. In the meantime summer crops can be easily grown on the same ground. Our farmers can plant it with perfect safety, as there is nothing of a pest nature to it. Its growth is strong, even on the poorest ground. On soils too poor for rye to get high enough to cut, Bur Clover made a growth of 2½ to 3 feet high. Bur Clover is a leguminous crop, gathers nitrogen from the air and, after furnishing winter grazing, leaves the soil in better condition for succeeding crops.

Bur Clover seed is produced in small prickly pods wound up spirally into a ball. The Southern grown seed is always sold “in the bur.” The first time one buys Bur Clover he sees its appearance. The only method of harvesting is to break up the “burs” after the plants have died down. Seed gathered this way always shows a certain amount of trash that is impossible to separate, but this carries with it the advantage of making inoculation unnecessary—the bacteria being carried in the “burs” and particles of dirt and trash.

We have discontinued the sale of the California Bur Clover, which is a somewhat different variety and has not proven so satisfactory as our native variety which we can bank only in the “bur” seed is used, sow at the rate of 50 pounds per acre. Growers who have had the most experience with their crop advise the use of 75 or 80 pounds, but 50 pounds per acre will give a good stand. Plant the seed by the first of September if possible. Early planting generally gives better stands.

An excellent plant for sowing on Bermuda grass land, as it matures its seed and dies at about the time the Bermuda grass starts into growth, and when the latter is killed by frosts this soon takes its place. A mixture of these two plants comes nearer giving continuous grazing the year round than any other mixture we have tested.

Bur Clover will reseed itself each year if stock is kept from grazing as soon as it begins to bloom freely. All that’s necessary is to let the seed mature and drop on the ground. Nature does the rest and a splendid crop of clover is yours.

Before planting the seed let it soak in cool water for two days, or better, soak the seed in cool water for an hour or two to remove bacteria, then dip in boiling water for two minutes. This will kill the bacteria remaining, so place the seed back in the first water to collect the bacteria again, for another hour before planting.

PRICES—Pound, postpaid, 40 cents; 3 pounds for $1.10. Write for special quotations on quantity lots.

Bur Clover Bulletin No. 100 This crop is coming to be a great help in the South, and it would be well for every Southern farmer to keep in touch with its uses. We issue a number of “Farmers' Bulletins” and we have one on Southern Winter Bur Clover which tells you of its value, culture, etc. If you think you will be interested in knowing about Bur Clover and how much benefit can be gained from it, ask for Farmers’ Bulletin No. 100. It will help you solve your pasture and forage questions.

HASTINGS' FARM BULLETINS FREE

A great many farmers in the South have never planted a diversity of crops and often they do not know how to plant wheat or alfalfa or any other of the grass, or Clover Crops or possibly make a Permanent Pasture.

Recognizing the need for such information, we have taken these various crops we have from time to time prepared and had printed a series of Bulletins on various crops.

They are written partly out of our own experience, partly from the experience of successful farmers working in other Southern states under the varying is damp season conditions. They are all valuable and interesting and we will send them free on request to any one of our customers. Just write us stating which bulletins you wish. There is no charge. We furnish them as a part of the service we are glad to render our customers.

Bulletin 100—Bur Clover
Bulletin 101—Alfalfa
Bulletin 103—Rape
Bulletin 104—Grasses
Bulletin 107—Onions For the South

LEAFLETS ON VETCH AND ON CRIMSON CLOVER

Bulletin 108—Grain (Wheat, Oats, Rye and Barley)
Bulletin 109—Meadows and Pastures
Bulletin 113—Turnips and Cabbage
Bulletin 114—Rhodes Grass

The above listed bulletins and leaflets are on subjects suitable for fall planting in the South and we hope you may find several of them interesting and valuable in your farm work.

As we reprint these bulletins from their original we wish to point out that the new points are brought out so all of these helpful "Farmers' Bulletins" are thoroughly up-to-date and the information is absolutely reliable.

We are especially anxious to hear from any of our customers as to any crop. If you have been particularly successful with some special method of cultivation, fertilization, preparation of soil, seed inoculation or anything you think would be helpful to us and other farmers we will consider it a great favor for you to write us about it.
ALFALFA OR LUCERNE CLOVER (No. 500)

OUR MOST VALUABLE CLOVER

That's exactly what it is, the most valuable permanent clover in the world, and every year sees hundreds of thousands of acres of permanent Alfalfa fields added to the farms of this country, and we want to assure you that there is no more sure or permanent clover than the one we are able to offer to any one of you.

Now, our Alfalfa is established on every one horse farm in the South, the owners of these farms need never worry about buying hay or forage, and it will also help to make the place a home. It is one of the best clovers for grass seed and is a valuable forage. Alfalfa is a permanent clover because you can grow and once well established and cared for it's there to stay, that is, on land where water is not too near the surface. We understand that there is one patch of Alfalfa now in Middle Georgia some 46 years old that is better now than when 2 and 3 years old.

What do you think of a single sowing lasting over 40 years? It's a stayer and it's been pulling up hay for its own use and sometimes 5, 6, or 7 tons per acre per year. Alfalfa hay is selling in Atlanta now at about $0.00 per ton. Do you know any better paying farming than that? We don't.

Now, Alfalfa doesn't take up lime and it's not a necessary plant food, but all of our soils in the Southeast seem to be more or less acid and Alfalfa will not grow in soil in which there is an acid condition. An average quantity, say about 25 to 30 bushels of air-slacked lime per acre, or one to three tons of fine ground limestone, applied broadcast on the surface and plowed in, will thoroughly sweeten almost any acid soil and put it in the very best condition for seedling. This takes out all sourness which seems to be deadly to young Alfalfa plants.

With a valuable and permanent crop like Alfalfa it's well worth while to do everything in our power to assure full success. There are a great many people who do not understand this matter of seed inoculation. We believe fully in its value and importance, and necessity in starting Alfalfa in sections and on farms. We have no reason to believe that it has not been grown in sections and on farms. It will make four to six times the growth from untreated seed. For full information as to the matter of inoculation of seed of Alfalfa and other leguminous crops see page 16.

WHY DON'T YOU GROW ALFALFA?

It's a fair question. Here is the most valuable hay and feeding crop in the world, and we believe it is safe in saying that not one farm in the hundred east of the Mississippi River and south of Tennessee has an Alfalfa patch.

Now, a great many of our people have planted more or less Alfalfa and failed. Why? In practically every instance it has been because of lack of proper preparation of the soil and planting at the wrong season of the year. We advise above all things fall planting, September 15th to October 25th being the best time. The reason for it is this. Alfalfa in this section of the country starts off slowly. Practically all of our lands are foul with weed and grass seed and with spring planting the weeds and grass almost invariably choke out the young Alfalfa; kill it by smothering before it gets a chance to grow. With fall planting, while the top growth is small all during the winter these wonderful roots of Alfalfa are penetrating down deep and when growing weather comes it shoots up ahead of and chokes the weeds and grass.

Another point: Hardly one farmer in a hundred puts enough preparation on the soil before the crop is planted. There is too much rough, cloddy ground, too many lumps that the young clover or grass plants can neither go around, push over nor penetrate. This makes bad stands. In getting land ready for any clover or grass crop it should be plowed deep, harrowed and harrowed and dragged until it is smooth and fine. You can't get it too fine and smooth and every extra day's work put into the preparation means many dollars in the succeeding hay crops. This thorough preparation is mighty good for any crop, but it's an absolute necessity for any grass and clover crop.

Now, back to the question: Why doesn't your farm grow Alfalfa? Have you failed in the past? If so, has it not been from planting in the spring instead of fall, or has it been from lack of proper preparation of the soil? Has it been because you haven't wanted to take chances and have never tried? If you do your part well there is mighty little chance of failure.

OUR ALFALFA OVER 99% PURE

Immense quantities of low grade foreign grown Alfalfa seed, full of weeds, trash, etc., have been dumped into the United States in past years. There is also much American Alfalfa full of dangerous weeds, and the buyer of Alfalfa seed cannot be too careful in purchasing it. If some weeds get a start in your fields success is impossible. We handle no Alfalfa seed less than 99% purity according to United States Department of Agriculture tests. Most of our Alfalfa seed runs 99% to 99.5% pure. If you are offered Alfalfa seed at a low price we advise you to send a sample to Washington for testing. The Department of Agriculture will tell you the quantity of any small sample of grass or clover seed you send them.

Grasses and clovers fluctuate and change prices from time to time. We sell only the highest grade Alfalfa seed, 99% purity or over, and all of it is the finest Northwest American grown seed on the market. Broadcast at rate of 20 to 30 pounds per acre. You can depend on Hastings' Seeds, Pound, by mail, postpaid, 30 cents; 3 pounds, postpaid, $1.10. Ten pounds or over about 30 cents per pound. Write for special prices when ready to buy. Ask for free Alfalfa Bulletin.
A Vegetable “Gold Mine” for the South

A great revolution is well under way in Southern agriculture and through that revolution the South, which is essentially an agricultural section, is going to come into its own and be what Nature has always intended, the wealthiest part of these United States. We have about all the soil and water, even the water, that we need. This we know by active engagement in “land building.” Our fathers and grandfathers did likewise before us, while negro and white croppers on millions of the South’s best acres have actually “greased the slide” for quick soil exhaustion.

We have reached a turning point. The order of the day is “land building” instead of “land slimming.” Our fathers and grandfathers knew that. They knew the vegetable matter that we either burned up or let wash away. We are beginning to see the senselessness of buying that costly fertilizing element, nitrogen, when we have both winter and summer grazing and hay crops in full production to capture it from the air and store it in for use of future crops of cotton, corn, oats, etc.

Six years ago few people took much stock in planting Crimson Clover, Vetch, Bur Clover, etc., but those few have opened the eyes of the South. Last fall thousands of farmers planted these new crops and have become full and enthusiastic converts to the new religion of soil building in the South. Since the general use of the nitrogen gathering bacteria on the seed before planting (see page 36) success has been assured in almost every instance, and once a man begins the use of Crimson Clover, Vetch, Bur Clover, etc., he is a new farmer on those old acres, a new man. He is a man who has opened his eyes to the possibility of yields of the staple crops of which he never dreamed before. Now this may seem exaggerated talk, but these crops make good and convince a man often against his will.

We have not urged these crops on our customers in the past in any considerable degree, for we wanted it demonstrated beyond a shadow of a doubt that they would “make good.” They have “made good” in the fullest and best manner, and we urge you to plant them this year and every year.

Crimson Clover is the most largely planted of these crops. It is a distinct and most valuable annual clover for sowing in late summer and fall in all parts of the South.

One enthusiastic grower says: “Crimson Clover is a vegetable gold mine.” It will yield under fair conditions 8 to 10 tons of green feed per acre, 1½ to 2 tons of hay, and is considered worth fully $20.00 to $25.00 per acre as a fertilizer crop. Succeeds on almost all classes and is the very poorest, but it is especially valuable on light sandy or loamy soils. Sow at the last working of staple crops like cotton or corn; it is now largely used in seeding down orchards. Can be sown from July to November in the Central and Lower South. The crop can be grazed or cut during the winter and if stock is taken off in March a full crop will be made. Sow seed broadcast at rate of 20 to 25 pounds per acre and harrow in lightly. Experienced farmers who know Crimson Clover say that the growing of it on land will increase the yield of a crop of corn following at least one-third and other crops proportionately. If you have never had Crimson Clover on your land you will find that inoculation of these seed will practically insure success. (See Mulford Cultures on page 46.) Like all other grasses and clovers the price of Crimson Clover crops change often. Write when ready to buy, asking for market price. Present price, per pound, postpaid, 40 cents; 3 pounds, $1.10. Write for quantity prices when ready to buy.

**White Clover (No. 509)** This clover does well in the Central South. Most all permanent lawn and pasture mixtures contain some white Clover and by itself makes a good grass and clover. It is not as vigorous as some clovers or grasses, but it is a hardy clover and can stand with rather uncertain habits of growth, sometimes covering the ground with a thick mat of vigorous plants and sometimes lying comparatively dormant, so it should be seeded into sod or mixed with other clovers or grasses. It succeeds best on moist ground or during a wet season. It sown by itself use 10 pounds per acre, or half that amount when put in with other clovers or grasses. Best grade seed, 83 cents per pound, postpaid. Write for quantity prices.

**Sweet Clover or Mellilotus** Also known as Bakka- ra Clover. As a land- lings Farm are leading us to seed our poorer land, with it for soil building. It is a coarse clover resembling Alfalfa, in fact, has been called “Alfalfa’s twin sister,” and using the same kind of inoculation is very valuable in preparing land for Aflalfa. It is fine for raising bees and to build up your land it is mighty good. Sow about 12 pounds to the acre in August to October for fall planting or in February and March for spring planting. Pound, hulled, or cleaned seed, postpaid, 50c. Write for quantity prices.

**Alsike Clover (No. 501)** Also known as Swedish Clover. This is the very best clover for wet lands. Steadily becoming more popular either with red clover or with orchards and pastures. Alsike grows to the height of red clover with more slender stems and smaller leaves. The blossoms are white with pink shading. It makes a fine clover to use in combination with Timothy, Orchard and Ryegrass for pasture or hay. Alsike does particularly well in the northern half of the Cotton Belt. Pound, postpaid, 75 cents. Write for special prices on quantity lots when ready to buy.

**Red Clover (No. 508)** A perennial clover lasting for several years. Red Clover for permanent pasture is not advised in the Lower South, but it seems to be admirably adapted to the hill parts of the South, especially the valley lands of North Georgia, Alabama and Mississippi, as well as states farther north. It makes two or more cuttings of hay each season and is fine for pasture and planting in orchards. Sow seed either in fall or spring at the rate of 12 to 15 pounds per acre for best grade seed. We guarantee 98% purity or above in our Red Clover seed. Weights 60 pounds per bushel. Pound, postpaid, 75c. Write for quantity prices when ready to buy. We will offer you right prices, send sample and give rates to your station.

**WRITE US FOR SPECIAL FIELD SEED PRICES**

At the time this catalogue goes to press it is impossible to name close and definite prices on most field seeds in quantity lots. You can readily understand why this is true, because the field seed market prices change up and down almost daily, many of the crops are not yet harvested and many conditions enter into the price.

To give you the very best and lowest prices on these field seeds we are obliged to quote you special prices when you are ready to buy. That is why we ask you to take advantage of the yellow “Special Quotation Sheet” in the back of this catalogue and let us make you our very closest prices on the amount you want to buy.

It pays well to use Hastings’ “Better Seeds,” regardless of price, but we want to give you the very best price possible. Write for quantity prices when ready to buy.
INOCULATE THE SEED
And Help Your Crops Grow the Highest Price Plant Food

That may be a new way of putting it, but it's pretty close to facts. The most costly element of commercial fertilizers is nitrogen and is usually estimated as being worth about $17 cents per pound. Practically all of our crops are bacteria grown in soil.

All the clovers, cowpeas, vetch, peas, beans, alfalfa, and the other leguminous plants, have the power to draw plenty of nitrogen from the air—or the so-called nitrogen-gathering bacteria are present in the soil to attach themselves to the roots of these plants. These bacteria on the roots are necessary to enable the plant to do full work in nitrogen gathering. If they are not present the crop will be more or less a failure. Plenty of bacteria on the roots mean rank growing crops; their absence means sickly looking plants. Where successful crops of any of these plants mentioned have been grown before, there are bacteria in the soil for them, but on new ground or where these crops have not been grown, the bacteria must be supplied before success can come.

These bacteria are obtainable in commercial form and are very easily handled effectively by any one following the directions found on the bottles or packages. All you have to do is to add a small quantity of water, then moisten the seed and your soil then becomes thoroughly inoculated at seed sowing time. It's the easiest, quickest, cheapest way to improve your soil.

This inoculation is not for direct use on crops like corn, cotton, oats, sorghum, millet, etc. When used on all kinds of clovers, cowpeas, soy beans, the crops accumulate a great store of nitrogen in the roots. These decay after a leguminous crop is cut off and the nitrogen is available in the soil for succeeding crops of cotton, corn, or grain, etc. In effect, it helps make your soil richer for succeeding crops, as well as making for better crops of your present crops.

Personally we have been watching very closely this matter of inoculation of the various leguminous crops ever since the attempt was made to put the bacteria in some form for sale distribution over twenty years ago in Germany. Various methods were tried in this country, both by the United States Department of Agriculture and various firms and chemists. None of these methods proved satisfactory, and it was only by newer discoveries that a safe and sure way of distributing these nitrogen-gathering bacteria was made possible. We have been furnishing these bacteria to our customers for the past ten years, and there has not been a case reported to us where it has failed to give satisfaction when properly used. In these preparations of bacteria the bacteria can be kept in perfect condition and vigor and sent to you by mail for use on your crops.

MAKES BETTER CROPS, SAVES FERTILIZER COST

Making better crops at less cost for fertilizer ought to be the aim and object of every farmer and gardener. Inoculation will help both. Remember, however, that these bacteria only act directly on what are known as leguminous crops; this includes all kinds of clover, beans, peas, alfalfa, vetches and peanuts. On these the bacteria can be applied with direct benefit—that is, it will make great deal larger crops per acre than you would otherwise get.

Our illustration above shows how these bacteria act on the roots of leguminous plants such as clover. The knobs or "nodules," as they are termed, are little storehouses of nitrogen, that costly element of plant food that these bacteria have gathered from the air. Some of this goes to feed the plant while growing, but the crop accumulates a great store of nitrogen if the crop is leguminous. Once the crop has been harvested, these roots decay, leaving in the soil a store of nitrogen for succeeding crops. A good crop of any leguminous plant growing in soil deficient in nitrogen will, if the seed be inoculated, add to that soil available nitrogen equal to that found in 700 to 1000 pounds of nitrate of soda per acre, worth anywhere from $2.50 to $3.00. What's more is that the nitrates added by a leguminous crop stay in the soil much better than when applied in the form of commercial soda.

The use of these bacteria on any leguminous crops means 50% to 100% more of that particular crop per acre, and it means a store of the highest priced element of plant food in your soil for succeeding crops. Isn't that worth while to you? It certainly is to us and these inoculating materials are used extensively on the Hashteds Farm every year.

Special Leaflet Free Telling You All About the Inoculation

If you want to know more about the inoculation of seed of leguminous plants send for a leaflet telling all about it. Ask for The Mulford Leaflet, which takes the subject up in detail and shows you exactly why you can't afford not to inoculate your legume seeds.

Mulford Cultures
FOR LEGUMES

These preparations of the nitrogen-gathering bacteria are put up by the H. K. Mulford Company, of Philadelphia, a concern with a world-wide reputation. These bacteria are sent out in sealed bottles when ordered, so that no outside bacteria can get in. They are "DIFFERENT" from all others on the market, being supplied in a light, almost white culture medium instead of the common yellow medium. This affects more prolific growth, increases vitality and vigor and lengthens the life of the bacteria.

Mulford Cultures are low in cost and very easy to use. No experience is necessary, no special knowledge or implements are required, and any one who can read can follow the simple directions on the bottles.

Note: There is a different kind of culture for each kind of legume, and you must tell what "kind of crop" you want to use it on when ordering. Culture for alfalfa, for example, is not good for nitrogen for nitrogen other crops.

We have Mulford Cultures for the inoculation of Alfalfa, Crimson Clover, Sweet Clover, White Clover, Red Clover, Alsike Clover, Bur Clover, Cow Peas, Soy Beans, Peanuts, Vetch, Velvet Beans, Beggarweed, Lespedeza or Japan Clover, Sweet Peas, Garden Peas, Garden Beans, Lima Beans.

Price—One-acre size bottle, $1.50; 5-acre size bottle, $5.00; Garden or ½-acre size bottle, 50 cents; postpaid. Specify the crop you want to use it on.
VETCH, A Wonderful Winter Crop

That is exactly what it is, a wonderful winter crop for all the South. One of the South Carolina growers expressed it well when he said: "I consider it the cowpea of the winter for our section."

When we speak of Vetch in this connection we mean the plant known as Sand, Hairy or Winter Vetch, which is the hardy variety, standing severe winters in all parts of the South without injury. This is the only variety safe to plant. Do not allow yourself to be fooled into buying the Spring Vetch either under the name of Spring Vetch, English Vetch or Oregon Vetch, for it is known under those three names. It is also used to adulterate Winter Vetch, and if you are offered Winter Vetch at a low price, look out for it. Spring Vetch is usually worth about 5 cents per pound and it is easy to fool the unsuspecting buyer.

The Winter, Sand or Hairy Vetch we have in one winter growing crop something that combines those three and it justifies fully our calling it a "wonderful winter crop."

With all due respect to Crimson Clover and Bar Clover, and we plant them both ourselves, we have always considered Vetch the most valuable of the three for the Middle South.

Planted with small amounts of rye, oats, wheat or barley for a support after it begins to run. Vetch makes a magnificent hay crop in spring, coming in ahead of everything else except thoroughly established fields of alfalfa, and at the same time leaves added fertility to the soil.

Planted on Bermuda sod and scratched in lightly in October it furnishes an abundance of grazing all through winter and spring for beef or dairy cattle, hogs or sheep, and in late spring can be let to go to seed, thus seeding down the ground for next season.

Grown in abundance it makes possible the profitable growing and fattening of cattle, something that hundreds have attempted to do and failed simply because they have had to buy feed for those cattle at top-of-the-market prices. Crops like Vetch make possible profitable live stock growing which in turn means prosperity on Southern farms undreamed of by either our fathers or ourselves.

Vetch is a crop worth while. Plant at least a trial acre of it this year. Seed must be inoculated before planting unless Vetch has been planted on the same ground before. For inoculating material see "Mulford Cultures" on opposite page.

A Crop of Oats and Vetch — Such a Field Will Turn Out Four to Five Tons of Dried Hay Per Acre.

WAR NOTE Winter Vetch as illustrated above is a product of Russia and Poland. At the time this catalogue is mailed it is impossible for us or any other seedsmen to say whether we will be able to supply genuine Winter Vetch as it was introduced years ago in considerable quantities this fall or not. These countries are in a critical situation due to the war and shipments from them are stopped, and whether or not we will be able to get any Vetch seed out of them can only be answered in the future.

Right here at the last minute, so to speak, before this page is printed, we find that we are able to get a good supply of Winter Vetch out of Russia and Argentina. The Trade situation and the Peace situation are good so far, and we are able to get our shipments through. There's a plenty of Vetch over there and of fine quality. The growers need the money and are doing everything possible to help us get it to Atlanta.

Remember there is no better winter crop in the South than Winter Vetch. We bank on it on the Hastings' Farm and we recommend it as highly as we possibly can. It's a real crop.

Write us when you are ready to buy and then we will be able to tell you whether we can supply Winter Vetch in quantity or not and the best possible price. We will have a limited quantity anyway. By mail, postpaid, 45 cents per pound.
GROW MORE GOOD GRASS

We of the South spend most of the summer killing grass in our cotton and corn fields and spend most of the winter buying grass in the shape of hay.

No farming country can be permanently prosperous without grass and live stock, cannot keep live stock without grass-growing. It's certainly true for the South to do more thinking about grass, to grow it where it can be grown. Georgia bought during one year over twenty million dollars' worth of hay from outside the state, mostly from states farther north. Hay is nothing but dried or cured grass cut at the time it is in its prime. It is one of the great staple crops of this country, its production being that in value it is exceeded only by the great staples of corn, wheat, and cotton. Georgia is still a hay buyer. So is every other one of the distinctively cotton states. In the fact of the fact, this drain of millions upon millions of dollars of our money, there are millions of acres in the South suitable for grass growing that are not utilized. We have got so used to looking on grass as an enemy in our cotton and corn fields that we have formed the habit of looking on it as a pest instead of a valuable crop. Grass in a crop needing clean cultivation needs to be killed. Everywhere else it ought to be encouraged and grown as a crop. It's more profitable than corn or cotton per acre.

You need grass for pasture and hay for stock. The merchant and dealer at your nearest towns has the hay and would be glad to sell it to you instead of sending it to Atlanta or other Southern cities. The only reason you don't get your share of these millions of hay dollars is that you haven't got the hay. If you will just get these lands of yours that are "laying out" into grass, either for pasture or hay crop, you have taken another step forward toward a better agricultural and financial condition for yourself.

The South needs cattle and it needs grass. With grass land on your place you can grow all the hay you will need and can sell the surplus. The farmer who pauses to consider the possibilities of grass has turned a new leaf in his agricultural history. It is almost certain that 90 per cent of the land in the South is capable of producing hay and grass. Grass can be grown so it will be available to you during the winter months.

Orchard Grass (No. 542) For the South, this is one of the most desirable grasses for the Middle South for either hay or pasture. While succeeding well on almost all reasonably fertile soils it does best on loamy and moderately stiff uplands. It is well adapted to pasture and relished by stock, especially when young, and bears closest grazing. This grass is more or less cultivated than any other grass in the world. There are over a hundred different varieties of orchard grass in the United States and Canada, and there are probably more than a thousand varieties of orchard grass in the world. The plants of this grass are not only large, but they are also very hardy and are able to withstand the severest winters. It is also a very good choice for a pasture, as it bears well on any soil, and is very productive. It is a very good choice for a pasture, as it bears well on any soil, and is very productive. FOR HAY AND PASTURES

Kentucky Blue Grass (No. 533) An excellent lawn and pasture grass, succeeding best on limestone land, but does well on silty, clay and medium soils. Blue Grass in pastures doesn't show up materially the first year after seeding, but if the soil is suitable it continues to improve until you have a beautiful stand. Hardly any one needs to be told the merits of Blue Grass. It has been a standby for years and years, although many do not plant it who should. Our "Elmwood Fancy" is the very best to be had. It's pure and clean; free from weeds and chaff. We make a specialty of Blue Grass for extensile lawn work here in Atlanta, where everything depends on having pure, vital seed, free from weeds. Here it remains almost dormant during the hot weather; its chief value in pasture seeding is for mixing with Bermuda, Lespedeza, and other summer growing varieties. For fall planting sow in October and November. Seed crop this year is fair. Sow about forty pounds per acre. Fancy reelected seed; Pound, 59c. Write for quantity prices when ready to buy.

Meadow Fescue (No. 558) This grass succeeds in almost all parts of the South. Furnishes green pasture through the fall and winter and is mighty good when used in mixtures for hay crops or permanent pastures. Sow in spring from February 15th to April 1st, or in fall August through October. Pound, postpaid, 50 cents. Write for quantity prices.

Red Top or Herd's Grass (No. 545) Hay and pasture grass. Succeeds on most kinds of soils, but does best on heavy or low, moist, stiff soils. By repeated mowing, this grass holds well during the summer, but its chief value is for winter pastures. It is perennial, not losing so well the first year, but grows better the longer it grows; will stand re-mowings admirably, growing well after being covered with overflow water for two or three weeks at a time. It will not become a pest, but can be destroyed any time if desired. Notice Illustration. Pound, 30c purity or over, postpaid, 20c. In quantity, not prepaid, about 18c per pound. Write for prices.

Timothy (No. 546) A hay grass suitable only for the northern part of the South, especially hill and mountain districts. It is the standard hay crop in the North and makes one of the most popular, nutritious, and salable of hay grasses. It does not make such good pasture, but the hay crop is where it is well adapted; on clay or heavy loams, lowlands, or in mountain districts, although it will do well on any good stiff, loamy soil, provided moisture is abundant. "Red Top or Herd's Grass" and "Meadow Fescue" mature at the same time as Timothy and do well in mixtures with the Timothy. They will increase the yield of hay and will largely increase the yield and value of pasture. Pound, 20c purity or over, postpaid, 10c. In quantity, not prepaid, about 35c per pound. Write for prices.

Hastings' Evergreen Lawn Grass (No. 550) A special mixture made up from a formula and contains only grasses that have been successfully used on the lawns here in Atlanta for the last ten years. Lawn-making has been a serious problem in this part of the South. The trouble with varieties like Kentucky Blue Grass being that they will not stand more than one full year, going to pieces under the heat and drought the second summer. After careful experimenting we made up this mixture and it has stood the test of ten years' planting and wherever ground has been properly prepared this has been the most successful in permanency of any of the lawn mixtures in this climate. It makes a very quick show and soon becomes a beautiful velvety lawn, on well prepared soil. Stands summer heat and drought without serious injury, coming out again in good shape as soon as the rains begin again. Pound, 40 cents; 3 pounds $1.49; postpaid. In quantity, not prepaid, about 35c per pound. Write for quantity prices when ready to buy. This mixture is generally sown at the rate of 40 to 50 pounds per acre.

Hastings' Permanent Pasture Mixture (No. 551) Years ago a gentleman came to Mr. H. G. Hastings with a request to make him up a mixture of grasses that would be permanent, something he would not have to plant over again each two or three years, something that would give all the year round value. The result of that request was a well proportioned mixture of nine different grasses. It was planted on rather rolling red clay land. Ten years later that pasture was in better shape, had a stronger growth of grass than it had when it was two years old. It had furnished continuous pastureage in wet weather and dry, in hot weather and cold. It is in addition to the pasture furnished the one heavy cutting of hay each year. At the end of ten years it showed no signs of failing; in fact, it was in better condition than it had ever been. The above is a record of our Permanent Pasture Mixture. The land was sown on was hardly medium in quality. It would not have made over a half bale of cotton per acre. Yet that ten-acre pasture furnished pastureage for numerous cows and horses the year round for ten years. Wasn't it worth while? It would stand a trouble to break up the land thoroughly, then narrow it down fine, put on 400 pounds of standard grade guano, and then spend several dollars per acre? Not a sure, and then spend several dollars per acre? Not a sure success, and then spend several dollars per acre for fertilizer has been put on that ten-acre pasture for ten years, and it yielded its grass crop better than any ten years old when than one or two years old.

There is no Bermuda or Johnson grass in this mixture. Sow 35 pounds of Permanent Pasture per acre, and it is most advisable to plant about one pound of Red Clover and one pound of Alsike Clover with every ten pounds of this mixture of nine pasture grasses. Clover seed cannot well he mixed in the grass seeds even, so buy it separately. Pound, 30 cents; 3 pounds, $1.49; postpaid. Present price for 10-lb. lots or over is 30 cents per pound. Write for quantity prices when ready to buy. As the different grass seeds contained in it fluctuate in price constantly it is fairer to you to make special quotation when you are ready to buy. All seeds are of the highest grade and you can depend on them.

The Kind of Pasture and Cattle You Can Have with Hastings' Permanent Pasture Mixture
RHODES OR EAST COAST GRASS
12 TONS OF DRY HAY PER ACRE PER YEAR, ST. LUCIE CO., FLA. (No. 543)

It's not often that a really new and valuable grass appears, but the Rhodes Grass, or "East Coast Grass," as it is more commonly known in Florida, is certainly a find, for we know of no grass so valuable for Florida and the Gulf Coast section.

Rhodes Grass has been grown on both the East and West Coasts of Florida for the last seven or eight years with most marked success.

Our Mr. Hastings visited the Fellsmere Farms at Fellsmere, St. Lucie County, Florida, in January, 1913 and was greatly impressed with the rank growth of this grass and its fully apparent value as a hay grass, something that Florida and the Gulf Coast section has long sought.

We were assured by Mr. Tillman, who has charge of the experimental work of the Fellsmere Farms, that the Rhodes Grass produced, in their experiment grounds, twelve tons of dry hay per acre the previous year. That is a mighty fine hay crop per acre for sandy land.

It is not coarse and makes hay equal to if not superior to the best Northern timothy hay.

The Illustrations shown on this page are from photographs taken on the Fellsmere Farms in the spring and shows only one of the nine or ten cuttings of hay per year that this magnificent hay grass produces.

The source of seed supply of this Rhodes Grass has been more or less of a secret for several years, but we succeeded in obtaining an ample supply of it and can furnish it In any quantities this summer and fall. Rhodes Grass has been tested thoroughly in South Texas for four years and the growers prove it superior to alfalfa as a hay crop.

For Florida and the Gulf Coast sections all around to the lower Rio Grande valley, above Brownsville, Texas, we believe that Rhodes Grass will prove the most valuable grass ever introduced.

RHODES GRASS CAN COMPETE WITH THE TIMOTHY OF THE NORTH

One of the great and important problems of Florida and the Gulf Coast sections is to secure an ample supply of fine hay, something entirely satisfactory for use on the farm and at the same time be marketable in the towns and cities in competition with that standard market hay, the timothy hay of the North.

In a letter to us from P. H. Rolfe, Director of the Florida Experiment Station, Prof. Rolfe says: "In Florida, the best land for the Rhodes Grass has been our hammock land, especially that which has a clay subsoil. . . . As to proper preparation of the soil, it is about the same as that for seedling other small seeds such as timothy, red top, orchard grass, etc.

Carried Away "We people are carried away with your seeds, etc. Think you've very nearly put everybody else out of commission."—Mrs. W. B. Collins, Lovelady, Texas.

A Splendid Florida Report

Mr. E. W. Amsden, of Ormond, Fla., is an "old settler." He said: "I bought from you in February 5 pounds of Rhodes Grass seed. Owing to extremely dry weather it did not come up until after the middle of April. I commenced cutting May 10th and kept it up every three weeks until September 1st. When I mowed a ton of good hay from the half acre. This was planted on land within 80 yards of the ocean beach, land that I never supposed would grow white beans. I have owned this land 30 years and never considered it worth clearing up.

E. E. Evans, Mercedes, Texas, said: "I will want for October sowing about 125 pounds Rhodes Grass. It has proved the most satisfactory hay made ever introduced in the Lower Rio Grande Valley. It has not failed to produce one ton per acre per month. I will sow it in my alfalfa field so that it will soon consist of Rhodes Grass only.

Mr. J. J. Thorber, Botanist of the Agricultural Experiment Station of Arizona, says: "I have had Rhodes Grass under observation for several years. It succeeds beautifully in our heavy clay loam soils and even in sandy or gravelly soils. Its growth is marvelous under our conditions."

We do not recommend Rhodes Grass for fall sowing in the Central South, but for Florida and Gulf Coast section it is safe. Sow 8 to 10 pounds per acre.

Special Rhodes Grass Circular

If interested, ask for our special circular on Rhodes Grass, which goes into this subject more fully than is possible in this catalogue.

Prices Quarter pound package, 55c; pound, $1.00; postpaid. By express or freight, not prepaid, 10-pound lots or over about 75 cents per pound. Write for our best quantity price when ready to buy.
Hastings’ “Home Beautiful” Flower Seed

Only varieties adapted to planting in Southern States. Make yours a “Home Beautiful” with flowers.

LIBERAL PREMIUMS—With an order for 50 cents worth of Flower Seeds you select 25 cents worth of Selected Bulbs, Roots or Plants. Read carefully and don’t confuse it with vegetable or field seeds. This Special Offer is for Flower Seeds only.

HASTINGS’ FLOWER SEEDS

Have no superiors and few equals. We use just as much care in the production of the finest strains of flower seeds as we do in vegetable seeds. We buy each variety because it pays us. Our business experience has shown us that our best advertisement is a satisfied customer, and our special high grade strains of seed are bound to make every one who plants them satisfied. The increase of our sales of flower seed in the South has been remarkable. Our customers find that the quantity of our seed and the size and brilliance of the bloom from our special strains of flower seeds surpass anything they have ever had. Until recently, or 12 or 15 poppy seed, as fine as dust, and call it a packet. Our business is not conducted on that basis. We charge you a reasonable price, just what the goodness is worth, and give you value received for every cent you send us, and then add to your order the extra seeds allowed in the offer at top of this page.

Flower seed is now one of the leading features of our business, and we lead in that just as we do in vegetable seed. Hastings’ Seeds of all varieties are Successful Seeds.

There are a number of flower seeds which should be sown in the fall for best results, as the length of time to hot weather from spring sowings is too short to allow for best development. In this class belong Pansies, Violets and Daisies. Other varieties, such as Sweet Peas, need early starting. The list of our special strains of flower seeds is shown on the opposite page.

The Soil

A mellow loam, which is a medium earth between the extreme of clay and sand, enriched by a compost of rotten manure and leaf mold, is adapted to the generality of flowering plants. The fact that the soil is not too rich or too poor, and that the ground is only a little elevated in the middle, allowing the water to run off, also favors the plants to better advantage.

Planting the Seed

Make the surface as fine and smooth as possible. Cover each sort of seed to a depth proportionate to its size; seed like portulaca, petunias, etc., should be merely sprinkled on the surface of the ground, and barely covered with earth. Sow the seed evenly, as to make a groove as deep as the seed is to be planted, scatter the seed along this, allowing 4 of the larger to 15 of the smaller seeds to the space one plant is to occupy when grown. Cover the seed by pressing; turn your lath flatwise and press the soil down firmly. On light, sandy soil seeds should be covered twice the depth that they should be in stiff or heavy clay soils.

Double English Daisy

The true English Daisy, perennial, cut very hardy and suited to the front of the flower border. It thrives in ordinary sandy or meadow soil, and is one of the easiest and surest plants to be grown in the open garden. It flowers early and is a good cut flower. 600 seeds per ounce. Packet, 10 cents.

Hastings’ Superb Mixed Dianthus (No. 778), or Garden Pinks—Packet, 10 cents; 3 Packets, 25 cents.

Hastings’ Superb Mixed Dianthus (No. 778)

Most of our friends prefer a few plants of many varieties of pinks and place them a few inches apart. To meet this demand we have made up a magnificent packet of Dianthus with 350 seeds, and the same price, Japanese Pinks, having the wildest range of form, color and markings imaginable. Large packet, 10 cents; 3 for 25 cents.

Hastings’ Superb Mixed Dianthus (No. 778) is a mixture of all the best varieties. It is the most reliable plant, and suits the Southern climate perfectly. The flowers are of all colors, red, pink, orchid, lavender, and blue, and are very fragrant. The flowers bloom from early spring to fall, and the plants are useful for cutting. Packet, 10 cents.

HOW TO SOW FLOWER SEEDS

With few exceptions flower seeds are very small, and sowing them by the inexperienced often results in failure, either partial or complete, because a few simple rules are not followed. There is nothing mysterious about success with flowers. It requires care and a little common sense. With these failures is almost impossible. It is work that can not be left to a farm hand or laborer. It must receive your careful personal attention. By observing closely the following rules for sowing flower seed you will have little cause for complaint or failure.

The Soil

A mellow loam, which is a medium earth between the extreme of clay and sand, enriched by a compost of rotten manure and leaf mold, is adapted to the generality of flowering plants. The fact that the soil is not too rich or too poor, and that the ground is only a little elevated in the middle, allowing the water to run off, also favors the plants to better advantage.

The flowers are of all colors, red, pink, orchid, lavender, and blue, and are very fragrant. The flowers bloom from early spring to fall, and the plants are useful for cutting. Packet, 10 cents.

Hastings’ Superb Mixed Dianthus (No. 778) is a mixture of all the best varieties. It is the most reliable plant, and suits the Southern climate perfectly. The flowers are of all colors, red, pink, orchid, lavender, and blue, and are very fragrant. The flowers bloom from early spring to fall, and the plants are useful for cutting. Packet, 10 cents.
HASTINGS’ MIXED NASTURTIUMS

These may be termed everybody’s flower. No garden is complete without them. Perfectly at home in all parts of the South; they furnish a never-failing display of brilliant bloom all through the season. Sow in any garden soil, for beds, borders or climbers, scattering the seed thinly. When, well up thin out the tall sorts six inches apart, and ten inches for the dwarf varieties. Our mixture of Nasturtiums comes to us direct from the great Nasturtium specialists of California. No such brilliant range of shades and colors has ever been seen before in this mixture. They please every one who plants them and are sure to satisfy you if you want the best there is to be had.

Nasturtiums are as easily grown as any other flower and the dwarf varieties make the most beautiful beds, borders, edging, and porch boxes, while the tall varieties are unsurpassed to cover stumps, flower stands, low fences, and unsightly places. It is doubtless if among the plants classed as Annuals there is any other of the summer blooming varieties which combine in so great degree the ease of culture, beautiful flowers of showy colors, profusion of bloom from early summer until killed by frost, and general excellence as the Nasturtiums. More and larger flowers are produced in thin soils, very rich soil tending to make rank leaf growth. Hot weather has no injurious effect.

Hastings’ Tall Mixed (No. 843)—All shades and colors of the tall growing varieties; only large flowering varieties in this. Packet, 5c; ounce, 20c; half pound, 75c.

Hastings’ Bush or Dwarf, Mixed (No. 842)—Flowers large, gorgeous and brilliant. All shades and colors of dwarf growing varieties. Packet, 5c; ounce, 20c; ¼ lb., 75c.

Marigolds

Free flowering, garden favorites, doing splendidly all over the South. The new and improved types are far superior to the small flowers of the old forms. Sow seed thinly in open ground when leaves of trees are out in early spring.

Tall Double African, Mixed (No. 830)—Extra large flowers, grows 14 to 18 inches tall, various shades of yellow. A bed of these will please you. Packet, 5 cents.

Tall French, Mixed (No. 831)—Smaller sized flowers, of deeper color than the African. Pkt., 5c.

Dwarf French (No. 832)—Grows 6 to 8 inches high; rather small highly colored flowers. Packet, 5 cents.

PETUNIAS

Petunias are very popular in the South; easily grown, and make most beautiful beds of showy colors. No garden is complete without them. They are hardy annuals; heat, rain, drought do not affect them. They bloom in a very short time and continue blooming to late fall. Scatter thinly and cover lightly. Petunias have always been a popular favorite in the South and the masses bloom is mighty pleasing. So few flowers are grown here in the fall that those grown up much better than in spring.

Finest Mixed (No. 835)—Solid colors, without variation in markings. Packet, 5 cents.

Hastings’ Striped and Blotched (No. 834)—A splendid mixture of finest striped, blotched and variegated sorts. Packet, 5 cents.

Giant Single Fringed, Mixed (No. 855)—Immense single fringed flowers of finest shades and colors. Surpass anything ever offered in petunias. Packet, 20 cents.

Double Mixed Petunias (No. 856)—Seed saved from finest large flowered collection. About 50 per cent of each double. Those that are single are mostly highly colored and blotched. Sow seed of these and Giant Single Fringed in boxes, in the house, transplanting afterwards to open ground. Packet, 5 cents.

Hastings’ Special Mixed Nasturtiums

Hastings’ Superb Mixed Poppies

Gorgeous is the only word that can describe the brilliancy of a bed of our Superb Mixed Poppies. They contain all the familiar varieties in the widest range of color and shape. sow very early, as seed germinates best when ground is cool. Scatter thinly and barely cover the small, fine seed. When well up thin out to 10 inches apart. They bloom better with plenty of room for development. Poppies should be sown where they are to remain as they need no transplanting. Both single and double poppies are very showy flowers and make wonderful beds and borders. California, the famous flower state, has great fields of poppies along the railroads and highways, the wonder of visitors as well as the admiration of Californians. Notice the illustration showing different types of large poppies on this page. Hastings’ Superb Mixed (No. 863). Packet, 5 cents; ounce, 30 cents.

DOUBLE CARNATION FLOWERED MIXED (No. 864)—Large double flowers; beautiful, fringed petals. Packet, 5 cents; ounce, 30 cents.

CARDINAL (No. 865)—Glowing shades of cardinal red. Finest double form. Packet, 5 cents; ounce, 35 cents.

AMERICAN FLAG (No. 866)—Scarlet and white. Packet, 5c.

PEACOCK (No. 868)—Brilliant scarlet, blotched, and white. Packet, 5 cents.

PEASBUD (No. 869)—New delicate colors. Packet, 5 cents.

TULIP (No. 870)—Intense scarlet, tuli or cup-shaped, two inches across, black blotch at base of petals. Packet, 5c.

BRIDE (No. 871)—Extra large, white flowers. Packet, 5c.

ORIENTALE (No. 872)—New perennial poppy, coming up year after year. Immense single scarlet flowers, 6 inches across. Packet, 10 cents.
**SWEET PEAS**

**Hastings' Finest Mixed (No. 883)**

Every year this splendid mixture of sweet peas becomes more popular and rightfully so. It's usually the case that sweet pea mixtures are made up from the inferior sorts, dull colors, or any kinds that the seedsman might have plenty of. Not so with our mixture. It is made up from 60 of the best varieties in existence, these being selected after careful observation of some 500 named sorts. Every one of these 60 varieties are grown separately under name. If long flowering period is desired dig trenches about 12 inches deep, fill in about 6 inches with well-rotted manure and top soill well mixed; plant seed on this and cover 2 to 3 inches. After seed comes up keep drawing in earth until trench is filled level with the ground. Packet, 5c; ounce, 15c; ½ pound, 50c; pound, $1.50; postpaid.

**Sweet Peas (Separate Colors)** Many prefer to plant the colors separately. We can supply you the best colors for the South in the following varieties: Emily Henderson—pure white (No. 884), Prima Donna—pink (No. 885), Lady Gristol Hamilton—lavender (No. 886), Navy Blue—blue (No. 887), Salopian—red (No. 888), America—striped and variegated (No. 839). Each: Packet, 5 cents; ounce, 15 cents; ½ pound, 50 cents; pound, $1.50; postpaid.

**Spencer Type Sweet Peas** Extra large flowers, fully double the size of the older forms. Many of the Spencers have wavy and flute-edged petals, which with their rich coloring give an almost orchid-like appearance. The Spencer type will not stand careless cultivation, but they will fully repay you for the extra trouble by their exceptional size and beauty. We have these wondrous sweet peas that attracted so much attention at the Panama-Pacific Exposition at San Francisco, where our grower took practically all the medals and other awards offered for sweet peas and other annuals. We grew them by hand in separate colors, and also we have a splendid mixture of these and many other colors. Separate colors: Wedgewood—blue (No. 893), King Edward—red (No. 894), Senator—striped and variegated (No. 895), White—pure white (No. 896), Astra—lavender (No. 899), and Hastings' Mixed Spencer (No. 898). Prices of each: Packet, 10 cents; ounce, 25 cents; ½ pound, 85 cents; pound, $5.00; postpaid.

**Hastings' Superb Mixed Pansies (No. 847)** Best and largest flowers are from seed planted in October all over the South. With slight protection the plants usually stand the winter perfectly. Our own mixture of the finest large flowering strains, from the greatest seed specialists of France and England, this includes such strains as Giant Trimaradeau, Odier, Cassier, Bugnot, Large Parisian Stamina, and many others of the very highest types. Packet, 25 cents; 3 packets, 50 cents.

**Large Flowering English "Face" Pansies (No. 848)**—Our mixture of the best English varieties of "Face" Pansies. Packet, 15 cents; 2 packets, 25 cents.

**French Mixed Pansy** (No. 849)—A fine mixture of best French varieties. Very satisfactory for early spring plantings, too. Packet, 10 cents; 3 packets, 25 cents.

**Fine Mixed Pansy** (No. 850)—Our own mixture of the more common varieties. This contains a wide range of colors and markings. Packet, 5 cents.

**VERBENA** Free flowering hardy annual of low spreading growth. Plants grown from seeds are much cheaper than cuttings and more vigorous. They make fine beds and edging.

**FINES MIXED** (No. 910)—All colors. Packet, 5 cents.

**HYBRIDS,** Best Mixed (No. 911)—Extra fine strain, all colors. Pkt., 10c.

**HASTINGS' MAMMOTH MIXED** (No. 912)—Our illustration shows one of the attractive flower clusters. Colors very rich. This is the finest strain of Verbena known. Pkt., 15 cents.

**Candidissima** (No. 913)—Large flowering, white variety. Packet, 10 cents.

**Sneeuwpoen** (No. 914)—Intense glowing scarlet. Packet, 10 cents.

**Italian Striped** (No. 915)—Each petal striped. Gives pleasing effect. All colors mixed. Pkt., 10c.

**PLANT SEEDS**
Bulbs for “The Home Beautiful”

Some of our most attractive and widely grown flowers come from Dutch and French Bulbs. These Holland and French Bulbs are very scarce this year, reports showing only about one-third the usual crop from these countries, but the bulbs that were grown were given very careful attention during growth and especially good care in the season of harvesting and storing. The writer has taken especial interest in bulb growing, carefully inspecting many fields and houses in Holland and France. The varieties we list have been carefully selected for their richness of color and strength of flowering, particularly for bedding or ‘outdoor’ purposes where the hardest conditions are met.

**Mammoth Crocus**

Our bulbs of Mammoth Crocus are large for Crocus and make large and showy blooms. They are fine for early spring, being one of the earliest of all bulbs. A charming effect is secured by planting them about the lawn in little clumps, or singly, as they will give a bright, unique appearance before the other spring flowers appear. Plant about two inches deep, and if planted in beds, about two inches apart. They are most effective when planted in large quantities, say 500 in a bed. Entirely hardy.

Non plus ultra—a Baron von Bruni—purple mauve; Sir Walter Scott—striped or variegated, purple stripes on white; Queen Victoria—pure white; Yellow Mammoth—extra large yellow, are the best varieties for the different colors for planting throughout the South.

Plant some of these this fall for the earliest bloom in the spring. The rich tones in these colorings are sure to please you. It is easier to order by color. You will get the named varieties above.

**CROCUS:** Blue, purple, striped, white, yellow. Price: Dozen, 35c; 100 for $2.50; postpaid.

**Mammoth Freesias**

These small bulbs give delicate and beautiful blossoms: their fragrance being especially delicate. The flowers keep a long time after being cut and the sentiment attached to Freesias as well as their beautiful appearance are making them more and more popular as they have been for years in France and Holland.

**REFRACTA ALBA** is the pure white variety, without the yellow blotch commonly sold. We sell this variety only. Price: dozen, 35c; postpaid.

**Dutch Hyacinths**

They are the most popular for fall planting of all bulbs in the South. They are most easily grown and make a wonderful effect in the early spring outdoors but can be grown in pots or in water in the house for bloom all during the winter. Start bulbs indoors every couple weeks to have continuous bloom but keep them in a dark place from the first until well developed or they won’t bloom at all. We take the utmost care in selecting our bulbs for richness of color and strong bloom. They make a very fine indoor flower for any purpose.

**Single Dutch Hyacinths**

First size bulbs, purchaser’s selection of colors. Pure White, Rose Pink, Light Pink. Price, postpaid, each 8c; dozen, 75 cents. $5.50 per 100 by express, not prepaid.

**Double Dutch Hyacinths**

First size bulbs, purchaser’s selection of colors. Pure White, Rose Pink, Light Pink. Price, postpaid, each 8c; dozen, 75 cents. No prepaid, $5.50 per 100.

**WHITE ROMAN HYACINTHS**

Very popular, owing to their delicacy and fragrance. Easily grown indoors in pots or planted in the open ground. Bulbs of largest size, strong and healthy. By mail, postpaid, 8¢ each; 75¢ dozen. By express, not prepaid, $5.50 per 100.
TULIPS and NARCISSUS

SINGLE AND DOUBLE TULIPS For the northern half of Georgia, Alabama, Louisiana, Mississippi, Texas, all of Oklahoma and Arkansas and the higher lands of the Carolinas, tulips will be found very desirable. In the southern half of the states named, also Florida, they are seldom found satisfactory. Tulips make the most brilliant and gorgeous display on the lawn of any of the spring flowering bulbs. Nothing will attract greater attention than beds of these in full bloom.

Single CARDINAL'S HAT—Rich, dark red, single; 5 cents each; 50 cents per dozen; $3.75 per 100. If by mail, postpaid, 6 cents each; 55 cents per dozen; $4.00 per 100.

CHRYSOLORE—Large, pure golden yellow, single; 5 cents each; 50 cents per dozen; $3.75 per 100. If by mail, postpaid, 6c each; 55c per dozen; $4.00 per 100.

LIMACULEE—Large, pure white, early single; 5 cents each; 45 cents per dozen; $2.25 per 100. If by mail, postpaid, 6c each; 50c per dozen; $3.75 per 100.

DUCHESSE DE PARMA—Large, orange red, single; 5 cents each; 45 cents per dozen; $2.25 per 100. If by mail, postpaid, 6c each; 50c per dozen; $3.75 per 100.

COTTAGE MAID—Beautiful Rose, shaded with white, a very attractive variety, splendid for late bedding and forcing; 5 cents each; 45 cents per dozen; $2.25 per 100. If by mail, postpaid, 6c each; 50c per dozen; $3.75 per 100.

MIXED SINGLE—All shades and colors of single tulips. This will make a gorgeous display of bright colors; 40 cents per dozen; $2.75 per 100. If by mail, postpaid, 45 cents per dozen; $3.00 per 100.

Double DUKE OF YORK—Very double; carmine rose; edged broadly with white, suffused rose, showy and extra fine; 5 cents each; 45 cents per dozen; $2.25 per 100. If by mail, postpaid, 6c each; 50c per dozen; $3.75 per 100.

LA CANDEUR—Large, double pure white changing to soft rose. Variegated leaf edge; fine for cemetery bedding; 5 cents each; 50 cents per dozen; $3.75 per 100. If by mail, postpaid, 6 cents each; 55 cents per dozen; $4.00 per 100.

GLORIA SOLIS—A grand double tulip; deep crimson, with broad golden yellow margin; very large and showy; 5 cents each; 50 cents per dozen; $3.75 per 100. If by mail, postpaid, 6 cents each; 55 cents per dozen; $4.00 per 100.

NARCISSUS GRANDIFLORA—Also known as Paper White Narcissus. One of the most popular and easiest grown of all bulbous plants. Good for open ground planting, for pot culture during winter in the house, or can be grown in water as shown in the illustration at the bottom of this page. Our bulbs are of the largest size, imported direct from the South of France. The famous Polyanthus variety. Price, 6c each; ½ doz., 30c; doz., 50c; postpaid. Not prepaid, by express, $1.00 per 100.

Narcissus

Hastings' Select Narcissus or Daffodil

EMPEROR—One of the largest and finest in cultivation; pure yellow primrose of immense size with wide, overlapping, rich primrose perianth.

EMPRESS—Strong, robust grower; large flowers. Trumpet a rich yellow with perianth snow white. The finest bicolor, and of rare beauty.

TRUMPET MAJOR—Really a single Van Sion. A large yet early flowering daffodil of rich yellow color in perianth and trumpet.

PRINCESS—Sulphur yellow perianth and deep yellow trumpet; long, handsome flowers for cutting.

VAN SION—The famous old Dutch Daffodil; double flowers of golden yellow. Fine for bedding with Hyacinths, as they bloom at the same time.

SELECT NARCISSUS PRICES—Each, 6 cents; dozen, 50 cents; postpaid, $1.00 per 100 by express, not prepaid.
On account of the lack of much skilled labor in growing our roses during the war we have not enough plants to supply many varieties. We think we have enough to fill orders for those we are listing but ask that you send in your order as soon as possible. These roses cost us a lot but are, we believe, the finest plants we have ever had and well worth the cost.

Complete directions for setting out these Roses and caring for them is sent along with each order. We want them to grow as well as you do.

We will ship none of these large plants until sometime between October 15th and November 1st. We want them thoroughly dormant before shipping, so that they will carry in the very best condition and be sure to live when planted in your rose garden. Order now.

**Prices**

- Grafted on strong-growing stock: 1-year, strong, open-ground grown, 60 cents each; $5.50 for ten; $45.00 per hundred. 2-year, strong, open-ground grown, 50 each; $7.00 for ten; $70.00 per hundred. 3-year, open-ground grown, 40 each; $10.00 for ten; $100.00 per hundred.

**Kaiserin Augusta Victoria**

One of the finest, large double roses. White with lemon center, full, pointed buds; vigorous and a good bloomer; very double. This rose is one of the newer sorts, with handsome, bright foliage. The flowers are borne on long, straight stems. A Hybrid Tea variety of great merit.

**White Maman Cochet**

This is pure white, or white with very slight, delicate pink tint on the outer petals; full double, beautiful, pointed buds with very regular, shell-like petals. It is a profuse bloomer and a strong, vigorous grower. We recommend this Tea variety as one of our very best.

**Frau Karl Druschki**

A splendid white Hybrid Perpetual Rose with blooms four to six inches across; buds full and well formed; open flowers very double. A strong vigorous grower; nearly always in bloom. Known as White American Beauty and considered the best snow white rose of its class.

**Devoniensis (Climbing Tea)**

White, tinted with pink; branchy. This is one of the most desirable climbing sorts, and is not surpassed by any other variety in vigor of growth. It blooms profusely and flowers for a very long time.

**Papa Gontier**

One of the older Tea varieties but the prince of roses for the production of long crimson rose buds of exquisite beauty. Foliage also is entirely distinct, being a rich, bronze green.

**Reine Marie Henrietta (Climbing Rose)—This Climbing Tea Rose is a pure shade of cherry red, which does not fade or shade off to undesirables tints; large double and beautifully formed; somewhat fragrant. This is one of the finest red climbing roses in existence and we strongly recommend it.**

**Louis Phillippe**

This Bourbon variety is of rich, velvety crimson color, while not so valuable for bouquets. It is the most showy and satisfactory dark red rose we have for gardens and grounds. It makes a large, vigorous bush, and there is scarcely a time during the entire year when it is not covered with bright red flowers.

**Radiance**

Flowers are a beautiful shade of the richest tone of pink, darker on the inner surface of the petals than on

---

**Kaiserin Augusta Victoria—A Splendid White Rose**

the margins. The buds are large and very fine; a strong grower and exceptionally desirable.

**Paul Neyron**

Strong and vigorous Hybrid Perpetual Rose with full double pink flowers. This variety is the largest flowered Rose grown, often measuring 6 inches across. A very desirable variety for the admirers of extra large roses.

**Madame Jules Grolez (Pink Kaiserin Augusta Victoria)**

This tea Rose is particularly fine; deep pink in the center, shading to lighter pink on the outer petals; margins of petals recurved, giving them a pointed appearance. A good grower and a profuse bloomer; it has no superior in color.

**Pink Maman Cochet**

A free-blooming Tea Rose, except in color. Large, pointed buds, very double; clear pink. Strong grower with beautiful foliage. It is our choice of all pink roses; hardy all over the South; for long life, freedom of bloom and large size of flowers it has no equal.

**Duchesse de Brabant**

The petals of this pink Tea Rose are deeper colored on the outer surface; buds and flowers globular; very free bloomer; vigorous and excellent for planting in beds, as the bushes when in bloom are very showy. Old-fashioned garden rose of great merit.

**Safrano**

Tea Rose with a delicate and beautiful tint of salmon, which is always bright and clear and does not fade or shade off into dull and undesirable tints. Of the most exquisitely colored roses and exceedingly beautiful in the bud. In the lower South it makes a stronger bush and bears an abundance of flowers at all seasons.

**Étoile de Lyon**

A deep yellow Tea Rose with fine buds profusely and is a hardy, strong grower; most distinguished and desirable yellow bush rose. It is considered the only perfectly hardy, ever-blooming yellow rose.

**Isabella Sprunt**

Lemon yellow Tea rose; buds like Safrano; a fine bloomer; a very desirable variety; strong grower. There are not many really good yellow roses for the lower South but we recommend this one. The flowers open well; it is satisfactory on light soils and is finer still on good rose land. Originated in Eastern North Carolina.
Rape, Barley, Crimson Clover and all other Clovers and Grasses are money-saving crops, which should be planted in the fall by every farmer in the South who wants to come out ahead this year.

What does it profit a man to grow a crop of 25 or even 35-cent cotton, when to do it he has to impoverish his land as well as spend all or nearly all his cotton dollars for grain, hay and fertilizer?

For over fifty years the South has absolutely been drained regularly of the billions of dollars that have come into it in payment for cotton; been drained of this fabulous sum to pay for food and grain products that should have been grown on the South's own acres. This is what has kept the South poor as a section; keeps the States composing it poor; keeps the individual cotton grower poor when he ought to be the wealthiest farmer on the face of the earth.

Let's look this matter squarely in the face. It's a fact that the farmer in the South who grows enough grain and hay to see him through the year, is the exception. The farmer who has grain and hay enough to see him through and a surplus to sell in town has been until the last two years almost unknown.

We sweat and toil all through the long summers to grow cotton. Suppose we do grow it and sell it for a good price. Where does that cotton money go? Largely to States like Illinois, Iowa, Indiana and others, for grain, hay and meat, yet with good seed of good varieties, intelligent cultivation and fertilizing. Georgia and other Cotton States need ask no odds of those States farther north in grain and hay production. The time to begin stopping this financial drain is now. Begin by planting grain crops, clover crops, winter forage and cover crops this fall on your farm.

LET US FIGURE ON YOUR WANTS

In addition to sending you seeds that will increase the profits of your farm, we can often save you money in the cost price.

This sheet, which is known as our "Special Quotation Sheet," has a distinct place in our system of business and a great many thousands of our customers make use of it every year. This sheet is more largely for your benefit than ours, and we want you to use it this fall. It is for the use of truck gardeners buying vegetable seeds in large quantities and for the buyer of farm seeds who wants to know exactly what those seeds will cost delivered at his station.

There are three things you actually want to know in seed buying. First, and most important, is that seed quality is right; second, what the cost of the seed is in Atlanta; third, just what the freight or express charges will be to your station. If seed comes from Hastings, you know the quality is right. On the other two points it is very easy. All you have to do is to write down the name and quantity of the kinds you want on the other side of this sheet, tear it out and mail it to us. We will quote you the best price we can make you, estimate the weight, figure out the freight or express charges and send it back to you promptly. You will then know exactly what the seed will cost you delivered at your station.

H. G. Hastings Co. is the only seed firm in this country that maintains a

Special Express and Freight Rate Department

This special department is maintained entirely for your benefit. It is the business of this department to figure out correct freight and express rates for your benefit, and if you order seed from us after a rate has been made, this department stands right behind those rates and makes the railroad or express company refund to you any overcharge if they should attempt to overcharge you. Do you know of any other seed firm that stands back of its customers in this way? We believe that every seed buyer ought to know exactly what seed is going to cost him delivered. We want to do business with every one on a satisfactory basis, and we know of no better way than to quote you none but the very highest quality of seed and then tell you what it's going to cost you from Atlanta to your station. We believe it to be good business policy to co-operate with you in every way; first, by producing for you the highest grade of seed; second, selling it to you at a fair price; third, protecting you from overcharges, made by mistake by the transportation companies.

You may find some seed priced lower by other houses than in our catalogue. We want you to remember one thing, and that is that there is no set standard of seed quality in the world, and if you are offered a low price you can be sure that the quality is as low as the price, and low quality seeds never made any man a good crop.

Do Not Use This for Family Garden Lists

Please notice that this sheet is not to be used for asking special quotations on family garden orders, such as seeds in packets or ounces, single pounds, pints or quarts. Prices on packets and ounces, etc., are distinctly stated (these prices including postage paid by us) in the catalogue, together with special premium offers of extra seed, etc. With these offers standing open to every seed buyer, we can not and will not make "Special Quotations" on family garden lists.

One last word: Make up your list and send it to us so that we can make you a delivered price. Asking for a quotation puts you under no obligation to buy unless you want to. We have just the right seeds and we believe that Hastings' Seeds on your farm will pay both you and us, and this quotation sheet will help us get together. Use it now.
H. G. HASTINGS CO., Atlanta, Ga.

Gentlemen: I would like to have you name me your lowest price on the list of seed I give you below. Please quote your best prices, and also let me know whether in your opinion the seed should be sent by Freight or Express, and also about what the cost of delivery will be. It is distinctly understood that in asking for this special quotation I am under no obligation to purchase same, and that this is entirely for my own information as to prices and Freight or Express rates.

H. G. HASTINGS CO., Atlanta, Ga.

Gentlemen: I would like to have you name me your lowest price on the list of seed I give you below. Please quote your best prices, and also let me know whether in your opinion the seed should be sent by Freight or Express, and also about what the cost of delivery will be. It is distinctly understood that in asking for this special quotation I am under no obligation to purchase same, and that this is entirely for my own information as to prices and Freight or Express rates.

Our change to grafted, open-ground-grown Roses for fall planting in Florida and the Gulf States has been absolutely justified by the steady increase in sales and the unbounded satisfaction of our customers who bought and planted them last fall.

Many of the best Roses, when grown on their own roots, do not give good results on these light soils of the Lower South. For this reason, and with a view to the greater satisfaction of our customers, this fall we offer Roses grafted on extra-strong-growing stocks that grow with greatest of vigor on these light soils and at the same time do equally well on the heavier clay soils of the Middle South.

Our 1919 Fall Collection consists of one plant each of White Maman Cochet, Kaiserin Augusta Victoria, Devoniensis, Pink Maman Cochet, Duchesse de Brabant, Mme. Jules Grolez, Radiance, Louis Philippe, Papa Gontier, Safrano, Isabella Sprunt, Etoile de Lyon for $4.50 prepaid.

These are all very free bloomers and splendidly adapted to the South. Planted out any time between November 1 and January 1, they will start growth immediately and bloom during the following spring. Full descriptions of these 12 varieties, as well as the other varieties we can supply, will be found in the Rose section in the back part of this catalogue. These plants are grown in open ground and are large, healthy plants, but cannot be shipped until growth is stopped by frost, usually between October 15 and November 1. Orders can be sent in at any time, and plants will be shipped, either by parcel post or prepaid express, as early as it is safe to dig and ship. This price of $4.50 for the above collection includes delivery to any post office in the United States.
